# Chapter 1

# Overview of MTIP Contents and Development Process

**METRO**

PEOPLE PLACES  
OPEN SPACES

## **1.1 MTIP PURPOSE**

The Metropolitan Transportation Improvement Program (MTIP) schedules spending of federal transportation funds in coordination with significant state and local funds in the Portland metropolitan region for the federal fiscal years 2004 through 2007. It also demonstrates how these projects relate to federal regulations regarding project eligibility, air quality impacts, environmental justice and public involvement.

Metro is the Portland area's designated Metropolitan Planning Organization (MPO). As the MPO, Metro is the lead agency for development of regional transportation plans and the scheduling of federal transportation funds in the Portland urban area. Regulations of the United States Department of Transportation (USDOT) require the MPO to develop a 20-year Regional Transportation Plan (RTP). The Plan must identify revenue that can be reasonably anticipated over a 20-year period for transportation purposes. It must also state the region's transportation goals and policies and identify the range of multi-modal transportation projects that are needed to implement them.

No project may receive federal funds if it is not approved in the RTP. However, the RTP approves more projects than can be afforded by the region in any given year. Just as Metro is required to develop an RTP, it is also mandated to develop a Metropolitan Transportation Improvement Program (MTIP) for the Portland urban area. The MTIP "program" process is used to determine which projects included in the Plan will be given funding priority year by year.

## **1.2 MTIP CONTENT**

The MTIP must be revised at least every two years and must address federally funded highway and transit projects and state or locally funded projects that have a potential to measurably affect the region's air quality. The most detailed information is required for federally funded highway and transit projects. For these, the MTIP must:

- describe the projects sufficiently to determine their air quality effects;
- identify the type of federal funding that will be used, and the amount of local matching funds;
- schedule the anticipated year in which funds will be committed to a particular project; and
- specify the phases of work to be supported by identified funds (e.g., construction, right-of-way acquisition or design).

This information is included in Table 4.1 of the MTIP. Appendix 5, the RTP's financially constrained project list, provides additional information about the projects. It is these project descriptions that are used to model air quality effects.

In addition to this level of detail for federally funded projects, the MTIP must also describe other significant state or locally funded projects that have a potential to affect regional compliance with federal air quality standards. The information about these

projects is limited to a description of the intended scope, concept and timing of the projects that is sufficient to model their potential air quality effects, total cost and responsible agency. Chapter 4 provides information for all projects anticipated in the region, including those that will not rely on federal funds.

This document, the 2004–07 MTIP, supplies transportation program information for the Portland urbanized area during the four-year period beginning October 1, 2003 and ending September 30, 2007 (federal fiscal years 2004 through 2007). However, each four-year MTIP is updated every two years, overlapping the previous MTIP document. Therefore, most projects in the last two years of an MTIP are carried into the next MTIP. The carryover programming is not static though. Slow progress on early phases of some of the “old” projects has caused their construction phases to slip to years later than originally expected. Conversely, some of the “new” projects, or their early phases, that have been allocated federal fiscal year 2006-07 funds, are ready to proceed immediately. Therefore, the current program reflects a blending of the old and new programming across the four years addressed in the document. *The full four-year program is shown in Chapter 4.*

### **1.3 2002 MTIP DEVELOPMENT PROCESS**

Metro works with the diverse mixture of local, regional, state and federal jurisdictions that own, operate or regulate the region’s transportation system to develop the MTIP. These jurisdictions include 24 cities, three counties, TriMet, South Metro Area Rapid Transit (SMART), the Oregon Departments of Transportation and Environmental Quality, the Port of Portland, the Federal Highway Administration, the Federal Transit Administration (FTA) and the city of Vancouver and Clark County in the state of Washington.

The 2004 MTIP reflects results of the Transportation Priorities 2004-07 Update process concluded by Metro in September 2003: for some classes of federal funds Metro is responsible for soliciting projects and awarding the funding, which is the purpose of the Transportation Priorities Updates. These funds are referred to collectively as “regional flexible funds” and include regional Surface Transportation Program (STP) funds and Congestion Mitigation/Air Quality (CMAQ) funds. Metro’s STP funds are a specific portion of all the STP funds appropriated to the state of Oregon and come to Metro in its role as the MPO of an urban area with a population in excess of 200,000. The CMAQ funds come to Metro as a consequence of both the severity of previous air quality problems here, relative to other areas of the state, and the region’s larger population. Also, the administration of these funds is more easily managed by the larger city and regional agencies found in the Portland-area, so that most of the CMAQ funds appropriated to the state are assigned to projects in the Metro region.

However, the 2004 MTIP also schedules both federal and state funds administered by ODOT for bridge and highway preservation and modernization, and federal transit dollars scheduled by TriMet. Allocation decisions by ODOT and TriMet are made in consultation with Metro, as the funds must be included in the MTIP. All funds scheduled

in the MTIP must be included without change, either wholly or by reference, in the State TIP (STIP). The Governor would resolve any disagreement between Metro and ODOT regarding any approved funds, though this has never occurred.

#### **1.4 FISCAL CONSTRAINT**

Federal regulations require the MTIP to be "constrained to reasonably expected revenue." As shown in Table 1.4-1 below, the 2004 MTIP meets this test through a mixture of conservative future revenue forecasts, agreements with ODOT for reliance on statewide sources of project funding and biennial program corrections.

The core of the MTIP's federal revenue projection is that anticipated federal appropriations, for both highway and transit purposes, are outlined in the six-year federal transportation act (TEA-21), which is the source of federal assistance for Metro, TriMet and ODOT. Starting with TEA-21's maximum authorization schedule, Metro works with ODOT to develop reasonable six-year appropriation estimates.

For the Transportation Priorities regional funding allocation, Metro assumes less than the maximum authorized in the Act to reflect historical trends, but there is no way to precisely predict how much will actually be appropriated. For the 2006 and 2007 STP and CMAQ revenue estimates, a 3.5% inflation factor was applied to the 2005 revenue forecast. In a similar fashion, Metro relies on TriMet estimates of anticipated federal transit assistance, based again on using historical trends to discount the maximum transit amounts authorized in TEA-21. With respect to state transportation funding, ODOT collects and distributes the state's gas tax, truck weight/mile tax and vehicle registration fee revenues. As with TriMet, Metro relies on ODOT's projections of federal and state revenues that will be made available to Region 1 projects under formulas implemented by the Oregon Transportation Commission (OTC) on an annual basis.

During the four years of this MTIP, ODOT is projecting expenditure of about \$392.6 million of combined federal and state revenue over the four years, within the urban portion of Region 1 (see Table 2.1-1 below). TriMet expects to receive approximately \$489 million of federal funding, excluding federal funds controlled by Metro (see Table 2.2-1). The MTIP does not report TriMet's general fund revenues.

Approximately \$106 million of regional flexible funds are forecast to be provided regional projects during the four year's addressed by the 2004-07 MTIP.

Table 1.4-1 demonstrates that more revenue is forecast during the four-year period of the MTIP than have been scheduled for spending on projects and programs. There is a possibility of a negative carry-over of project costs from FY 03 that may erase the demonstrated revenue surplus. Additionally, the current authorizing legislation, TEA-21 will expire soon and all future year revenue estimates are made without benefit of federal reauthorization legislation that will define funding authority for these programs. The forecasted revenues and program of projects, however, is clearly consistent with the reasonably anticipated revenues for the region, as directed by federal guidelines.

**TABLE 1.4-1  
DEMONSTRATION OF FY 04-07 MTIP FISCAL CONSTRAINT  
(millions of \$)**

<b>COST OF APPROVED PROJECTS</b>					
	<b>FY 04</b>	<b>FY 05</b>	<b>FY 06</b>	<b>FY 07</b>	<b>TOTAL</b>
Transportation Enhancement (TE)	.311	2.918			<b>3.229</b>
Surface Transportation Program (STP)	16.683	17.785	15.362	14.607	<b>64.437</b>
Congestion Mitigation/Air Quality (CMAQ)	9.037	8.995	6.156	10.659	<b>34.847</b>
<b>APPROVED PROJECTS TOTAL</b>	<b>26.031</b>	<b>29.698</b>	<b>23.866</b>	<b>25.266</b>	<b>102.574</b>

<b>FORECASTED REVENUE</b>					
	<b>FY 04</b>	<b>FY 05</b>	<b>FY 06</b>	<b>FY 07</b>	<b>TOTAL</b>
TE Appropriations*	1.711	.09			<b>1.801</b>
STP Appropriations	15.205	15.661	16.000	16.750	<b>63.616</b>
CMAQ Appropriations	9.755	10.048	10.340	10.660	<b>40.803</b>
<b>Total Projected Appropriations</b>	<b>26.671</b>	<b>25.799</b>	<b>28.688</b>	<b>27.410</b>	<b>106.220</b>

\* The Transportation Enhancement funds transitioned from being distributed as part of the regional flexible funds to a statewide program administered by ODOT.

## **1.5 PROJECT PRIORITIZATION PROCESSES**

As mentioned previously, the federal transportation revenues reported in this MTIP are prioritized and scheduled to fund projects through several different processes which are administered by three agencies; ODOT, TriMet and Metro. The Oregon Transportation Commission prioritizes project funding administered by ODOT through the STIP process. TriMet's decision about the prioritization of federal funds dedicated to transit improvements is made by the TriMet Board of Directors. Metro's decision about which RTP projects and programs to fund is accomplished through the Transportation Priorities Update process.

**ODOT Funds.** ODOT prioritizes and administers Interstate Maintenance, State Modernization (projects that add vehicle capacity), federal and state bridge rehabilitation, and highway safety, preservation and operations funds, again, in

cooperation with Metro, through the State Transportation Improvement Program (STIP) process. Rather than a solicitation and narrowing process, ODOT proposes a program of funding improvements and solicits comments on the proposed program, prior to approval of the program by the OTC. The maintenance, bridge rehabilitation, and preservation portion of the program is largely driven by a needs based assessment of the conditions of the facilities. The modernization and safety portions of the program are also informed by need but are prioritized in a higher degree of coordination with local agencies affected by the impacts of such projects.

JPACT and the Metro Council have commented on the ODOT program. Those comments are included in Appendix 11. Approval of the ODOT program will be conditioned on adequately addressing the issues described in Appendix 11.

A more detailed summary of the ODOT prioritization process is provided in the 2004-07 STIP document.

**TriMet.** In cooperation with Metro, TriMet is primarily responsible for the prioritization and administration of FTA funding categories (e.g., Section 5307 and 5309 funds) that are limited to transit purposes (e.g., bus purchase and maintenance, light rail construction, etc.). TriMet develops its own annual Service Plan and five-year Capital Plan to determine service and capital priorities. It then allocates both federal and general fund revenues to implement these plans. The MTIP reports only the federal funding component of TriMet's overall capital and operations programs.

***Transportation Priorities 2004-07: Investing in the 2040 Growth Concept.***

Consistent with federal regulations and its own public involvement policies, Metro conducts a rigorous 18-month process to solicit nominations and select projects for funding that includes numerous opportunities for public review and comment.

The process began with a review of the policy objectives and procedures of the Transportation Priorities update. Input was solicited from affected jurisdictions and stakeholders through a questionnaire, interviews and focus groups. The result of this outreach was used to inform JPACT and the Metro Council on a refinement of the program policy objectives and to update the solicitation materials and technical scoring criteria. The policy objectives of the program, adopted by Metro Resolution No. 02-3206, were defined as following.

The primary policy objective for the Metropolitan Transportation Improvement Program and the allocation of region flexible transportation funds is to:

- Leverage economic development in priority 2040 land use areas through investment to support
  - centers
  - industrial areas and
  - UGB expansion areas with completed concept plans

Other policy objectives include:

- Emphasize modes that do not have other sources of revenue

- Complete gaps in modal systems
- Develop a multi-modal transportation system

Technical ranking criteria were adopted for the following modes:

1. Bike/Trail
2. Boulevards
3. Bridge
4. Freight
5. Green Street Demonstration Projects
6. Pedestrian
7. Regional Transportation Options
8. Road Modernization
9. Road Reconstruction
10. Transit
11. Transit Oriented Development

Planning projects were also eligible for funding but no specific technical evaluation criteria were developed for this class of projects.

The Transportation Priorities update process uses a 100-point technical ranking system that scores projects for:

- congestion relief/use of alternative travel modes (e.g., bike, pedestrian and transit use) (25 points);
- support of Metro's Region 2040 Land Use goals (40 points);
- safety hazard correction (20 points); and
- cost effectiveness (15 points).

Bonus points were awarded to boulevard, freight, road modernization and road reconstruction projects that provided green street elements of either stormwater infiltration devices or street trees species consistent with the *Trees for Green Streets* handbook.

These are only the general ranking categories. More detailed descriptions of the technical ranking criteria are shown in Appendix 3. Qualitative criteria for project selection include project relationships to regional policy, including:

- regional goals and system definitions contained in the 2000 RTP
- Metro's "Creating Livable Streets" Design Guidelines
- Environmental Justice considerations (see Appendix 6)
- the State Transportation Planning Rule (Goal 12)
- provisions of the Clean Air Act Amendments (CAAA) of 1990 and the associated State (Air Quality) Implementation Plan (SIP)

Other factors that have been considered during selection include local agency financial contributions over and above minimum match levels, affordable housing, school safety and recovery of threatened or endangered species populations.

The RTP process constitutes the means by which diverse and competing system needs are balanced on a total system basis within a 20-year horizon. Also, Metro allocates funds to each of these types of projects. However, determining the appropriate support to provide to one mode versus any other in any given Transportation Priorities update remains a policy decision that is influenced by qualitative measures and subjective consideration of competing policy objectives.

As in previous criteria development procedures, the thrust of the Transportation Priorities 2004-07 exercise was to better assure that transportation investments complement the Region 2040 land use objectives. This process was aided by availability of the 2000 RTP that addressed the policy and multimodal system considerations of how best to achieve this objective.

Additional policy discussion at JPACT and the Metro Council following the initial screening of projects provided direction to technical staff related to meeting 2040 land use objectives on how to provide a recommendation for project funding balanced against forecasted revenues:

- Invest in all types of 2040 mixed-use and industrial lands
- Emphasize non-road/bridge projects to maximize development and multi-modal objectives in mixed-use areas
- Screen all projects and programs on their relationship to the implementation of mixed-use and/or industrial area plans and development (2040 technical score, qualitative issues/public comments)

## **1.6 PROGRAMMING FUNDS AND PROJECT SELECTION**

As discussed above, project prioritization refers to the process of choosing a subset of projects to advance in any given two-year MTIP cycle, from among all those approved for implementation in the RTP 20-year plan. Project *selection* refers to the process of deciding how projects that are prioritized for funding are organized by year (programming), and, where conflicts develop within a current fiscal year, how it is decided to advance some projects ahead of others (project selection). The answer to this question depends mostly on which agency has primary administrative responsibility for the type of funding that is at issue.

### **1.6.1 Programming Funds**

**ODOT Funds.** ODOT prioritizes and administers Interstate Maintenance, State Modernization (vehicle capacity projects), federal and state bridge rehabilitation, and

highway safety, preservation and operations funds, again, in cooperation with Metro. Statewide, approximately \$57 million per year is spent on vehicle capacity projects (modernization); the minimum as required by the state constitution. The region's share of these funds is approximately \$27 million per biennium.

Additionally, the previous two state legislative sessions have produced two transportation funding measures whose future proceeds will be bonded, in part, for vehicle capacity and rehabilitation projects throughout the state. These efforts are commonly known as the Oregon Transportation Investment Acts (OTIA I, II and III). Projects selected for funding through OTIA I and II were amended into the 2002-2005 MTIP and conformed for air quality. Projects to be funded through OTIA III have not yet been defined and may need to be amended into this 2004-07 MTIP.

The Oregon Transportation Commission has dedicated all other state resources to keep pace with essential system preservation activity. ODOT's modernization projects in this MTIP have been confined to the completion of the Westside Corridor (Highways 26 and 217) widening program. The OTIA projects address a wide variety of freeway, highway and bridge modernization and reconstruction needs.

ODOT's priorities within the other funding categories are largely scheduled by quantitative indexes of pavement and bridge conditions. The most deficient facilities are the first prioritized for funding. Where cost increases on a top-ranked project increase, or projected revenue comes in at levels less than anticipated, lesser-priority projects are deferred. Eventually, the lowest technically-ranked projects drop from the program until additional funds become available for allocation in a new MTIP cycle.

**TriMet.** In cooperation with Metro, TriMet is primarily responsible for both prioritization and administration of Federal Transit Administration funding categories (e.g., Section 5307 and 5309 funds) that are limited to transit purposes (e.g., bus purchase and maintenance, light rail construction, etc.). TriMet allocates both federal and general fund revenues to implement their five-year Transportation Improvement and Annual Service plans. Transit funds are subject to their own limitation and do not draw down the ability of either ODOT or Metro to spend other fund categories in any given year. Again, the MTIP reports only the federal funding component of TriMet's overall capital and operations programs.

Federal funding received by TriMet in the current MTIP consists primarily of annual Section 5309 New (Rail) Start appropriations made to TriMet for construction of rail projects. The Interstate MAX light rail extension from the Rose Quarter to the Exposition Center is scheduled to receive its final two years of appropriations in years 2004 and 2005 (\$117.85 million). Discretionary appropriations for the I-205 light rail from Gateway to Clackamas regional center and downtown Portland improvements (\$142 million), and Wilsonville to Beaverton commuter rail (\$59.25 million) are intended to be sought by the region in fiscal years 2005 through 2007 and possibly beyond, but are not programmed in the MTIP at this time as their programming is not yet assured. Other federal transit funding categories received by TriMet (Section 5307 and 5309 formula funds) have

greater programming discretion. Metro though, supports TriMet's policy of bundling these discretionary federal funds into several large programs, (e.g., bus purchases, and bus and light rail maintenance) for purposes of minimizing the complexity of submitting annual federal grant requests to Federal Transit Administration. Metro defers allocation of discretionary federal transit funds to TriMet for routine transit maintenance programs.

In practice, TriMet's major service decisions are well coordinated with RTP-defined transit system corridor priorities and new service decisions are reflected in Metro's regional transportation model. Metro and TriMet are also working to elevate the discussion of how to allocate the general fund revenues that are freed from maintenance programs by this "bundling" practice.

***Metro Regional Flexible Funds.*** Metro selects projects funded with local Surface Transportation Program (STP) and Congestion Mitigation/Air Quality (CMAQ) funds, in cooperation with all of the region's local and regional transportation agencies. These funds are awarded by Metro to sponsoring agencies, which then contract with ODOT to obtain access to the funds. These agencies are ultimately responsible for operation of newly constructed facilities. Unlike all the other regional funding sources discussed above, administrative responsibility for STP and CMAQ funds is essentially split between Metro and a broad selection of local sponsoring agencies.

To manage equitable access to the regional flexible funds, Metro staff coordinates with sponsoring agencies to determine the expected timing of project phases and seeks to schedule expected revenue to planned work phases in each year of the program. The goal is to assure that all regionally funded projects are able to advance in a timely, logical fashion. Typically, this involves preliminary engineering in year one, right-of-way acquisition in year two and construction in year three. It is very rare that a project can execute more than one phase of work in a single year.

Balancing project expenditures with annual revenue limits becomes more difficult when a single project requires a large sum to complete one or more phases of work in one year. A project that requires above \$5 to \$6 million can make it difficult for other more modest projects to proceed in a given year. There are no adopted rules for making such decisions, except that the volume of project work that can proceed in any one year must fall within the revenue that is available that year, including conditional access to statewide resources, as discussed above.

At the outset of each two-year MTIP cycle, Metro formulates a proposal that seeks to balance these constraints and assure progress across jurisdictional boundaries so that no single agency is unduly delayed in delivering its approved projects. The proposed scheduling of the regional flexible funds is submitted for consideration by a regionally sponsored technical subcommittee for approval by consensus. Thereafter, to a very large degree, projects are selected to advance in the order in which they are received, as all projects share equal priority for funds. If projects that are scheduled to spend funds in a given year are delayed, they receive automatic authority to spend funds in the following year. Every two years, a new schedule is developed to account for advances

and delays, and incorporation of newly authorized funds, and the biennial process of expenditure resumes.

### **1.6.2 Selection of Projects**

All of the fund types discussed above must be programmed in the MTIP. However, TriMet funds do not restrict the ability to spend ODOT or regional funds and, for the most part, ODOT's spending is similarly segregated. ODOT and TriMet are responsible for developing their own funding priorities. The MTIP, which reports on the federal portion of these funds, is developed by JPACT and the Metro Council, in cooperation with ODOT, TriMet, SMART and other transportation service providers in the region.

For the regional flexible funds, the Transportation Priorities 2004-07 update and the MTIP adoption are the means used to prioritize projects for funding and balance allocations to project phases and years of expenditure. Thereafter, oversight of all fund types is left largely to discretion of the primary administrative agency. The caveat is that no projects may be added or taken from the total regional program, or diverted between projects, or project phases without notification and approval by Metro.

If a current year project is not ready to proceed, Metro or ODOT may select projects scheduled in years two or three of the program to proceed. For example, a first-year project may have delays in development of plans and specifications, or its right-of-way acquisition may encounter obstacles. In this instance, Metro, in cooperation with ODOT and other affected agencies, would move the delayed project to a later year and select a project from year two or three of the three-year approved program period. This flexibility assures that the region contributes its share to orderly statewide obligation of available funds. Because selection actions are not considered formal amendments under federal regulations, *they do not require reconformity of the TIP with the State (Air Quality) Implementation Plan.*

Should a project be delayed to a later year, either because it was not ready to proceed or because less funding is made available than expected, the project would then share equal priority with all other projects scheduled in that later year of the Approved Program. Once selected, readiness to proceed decides which projects advance that year.

### **1.7 MTIP AMENDMENT PROCESS**

This section describes the management process to define the types of project adjustments that require an amendment to the MTIP and which of these that can be accomplished as administrative actions by staff versus policy action by JPACT and the Metro Council.

## **Objectives of the Process**

1. Ensure that federal requirements are properly met for use of available federal funds, including the requirement that projects using federal funds are included in the TIP and that the projects are consistent with the financially constrained element of the Regional Transportation Plan (RTP).
2. Ensure regional consideration of proposed amendments having an impact on the priority for use of limited available resources or having an effect on other parts of the transportation system, other modes of transportation or other jurisdictions.
3. Ensure that the responsibilities for project management and cost control remain with the jurisdiction sponsoring the project.
4. Authorize routine amendments to the MTIP to proceed expeditiously to avoid unnecessary delays and committee activity.
5. Provide for dealing with emergency situations.
6. Ensure projects are progressing to fully obligate annual funding in order to avoid a lapse of funds.

## **Policies**

1. Consistency with the financially constrained element of the RTP – Projects included in the MTIP must be identified in or consistent with the RTP. Questions relating to the need for and scope of a project are answered through inclusion in the RTP; questions relating to the priority of projects within available resources are answered through inclusion in the MTIP. Projects affecting the capacity of the transportation system, projects that impact other modes and projects impacting other jurisdictions must be specifically identified in the RTP financially constrained system; Projects such as signals, safety overlays, parts and equipment, etc. must be consistent with the policy intent of the RTP. An amendment to the RTP to add a project can occur concurrent with an MTIP amendment and must follow the process for amending the RTP as outlined in the most current plan (the process for amending the 2000 RTP is contained in Section 6.6 on pages 6-24 through 6-27).

Prior to formal inclusion in the RTP financially constrained system, projects will need a finding of conformance with the State Implementation Plan for air quality, with concurrence from the Federal Highway Administration – Federal Transit Administration.

2. MTIP Additions – All project and program additions to the MTIP must be at the request of the sponsoring jurisdictions governing body and require adoption of a Metro/JPACT resolution approving a specific new project as a priority for use of a particular category of funds. This action will be based strictly on the amount of federal

funding available and represents a priority decision as to the most effective use of the resource.

Exception: New projects the following types of funds or in the following conditions can be administratively added to the MTIP at the option of Metro staff in cases where the proposed improvement does not significantly affect capacity, with monthly notification to TPAC:

- Safety funds – up to \$500,000;
- Bridge replacement funds – up to \$5 million;
- Interstate Maintenance funds for resurfacing/rehabilitation type projects - up to \$5 million;
- Emergency additions where an imminent public safety hazard is involved; and
- Addition of project details to previously approved generic projects such as parts and equipment, signals, street overlays, etc.

An amendment to add a project to the MTIP can occur concurrent with a MTIP amendment to transfer project funds between MTIP projects. To request the addition of a project to the MTIP outside of the periodic Transportation Priorities project selection process, a project sponsor shall meet with the MTIP manager for consultation on the provision of the following information to inform consideration of the MTIP amendment resolution:

- Local and/or regional policy decisions, program changes and other considerations that support the request for the MTIP amendment;
- Proposed project additions meet the preliminary screening criteria and public involvement requirements of the MTIP;
- Project information needed to address technical evaluation measures used for the appropriate project selection criteria such as land use objectives, safety, cost effectiveness, etc. and any qualitative considerations the project sponsor wishes to have considered in the request.

Funding match ratio eligibility will be consistent with federal regulations and policies from the previous Transportation Priorities project selection process.

3. MTIP Amendments – Amendments to the MTIP for previously approved project(s) on the following basis:

- a. Administrative Adjustments (requiring monthly notification to TPAC:

- Transfer of funds between different phases of a project or different program years within previously approved funding levels.
  - Transfer of funds between projects within previously approved funding levels; must be accompanied by a statement as to the impact on the project relinquishing funds; funding fully transferred from a project to another must include a commitment to fund the project giving up the funds with another source of funds (follow-up documentation will be required); requires monthly report to TPAC.
- b. Adjustments by Metro/JPACT Resolution:
- Funding transfers to a new MTIP project.
  - Increased allocation of funds in excess of level previously allocated to the jurisdiction.
  - Adjustments that significantly change the scope of the project location or function. For project location, significant shall be defined as more than 50% of the project improvement (as measured by linear feet of improvement) outside of the original project area scope. For project function, significant shall be defined as the deletion of a modal element of a project described in the original project scope. For change of scope requests that cannot be measured in these manners, the MTIP manager may require a resolution for approval of the adjustment if he/she determines, using professional judgment, the proposed change in scope would have significantly altered the technical ranking or qualitative consideration of a project during the Transportation Priorities project selection process.

Transfers between jurisdictions require approval of each affected jurisdiction.

# Chapter 2

# Highlights of Current Four-Year Program

**METRO**

PEOPLE PLACES  
OPEN SPACES

## 2.1 ODOT PROGRAM HIGHLIGHTS

ODOT has proposed programming \$392.6 million of state and federal funds to highway capacity, preservation, operations, bridge, safety, enhancement, and bicycle/pedestrian programs, summarized below in Table 2.1-1, below. Additionally, a state bond program, commonly referred to as OTIA, was passed by the state legislature to fund specific projects from several of the traditional categories of state programs. Funding of projects from this source is also identified in Table 2.1-1.

<b>PROGRAM CATEGORY</b>	<b>FY 04</b>	<b>FY 05</b>	<b>FY 06</b>	<b>FY 07</b>	<b>TOTAL</b>
<b>Capacity (Modernization)</b>	\$36.13	\$5.88	\$16.55	\$18.05	<b>\$76.614</b>
<b>Preservation</b>	\$12.96	\$15.20	\$22.55	\$47.66	<b>\$98.396</b>
<b>Operations</b>	\$8.12	\$6.46	\$7.30	\$3.69	<b>\$25.570</b>
<b>Bridge</b>	\$8.53	\$47.78	\$.29		<b>\$56.604</b>
<b>Safety</b>	\$5.97	\$7.30	\$5.91	\$11.69	<b>\$30.867</b>
<b>Enhancements</b>			\$2.35		<b>\$2.35</b>
<b>Bicycle/Pedestrian</b>	\$.56	\$.54	\$.77	\$.77	<b>\$2.64</b>
<b>OTIA</b>	\$97.56	\$2.00			<b>\$99.56</b>
<b>TOTAL</b>	<b>\$170.19</b>	<b>\$83.02</b>	<b>\$54.95</b>	<b>\$81.09</b>	<b>\$392.59</b>

(in millions of \$)

Note: The OTIA program funds projects in several ODOT program categories. The timing of OTIA funded projects has not been determined, so that fiscal year totals are subject to change.

### 2.1.1 Highway Capacity.

ODOT is about to complete Phase 1 of the I-205/Sunnybrook Split Diamond Interchange and Phase 3 of the US 26/Sylvan Interchange and widening program with FY 03 Freeway Expansion funding.

This MTIP has scheduled the widening of US 26 from the Highway 217 Interchange to Murray Boulevard with Freeway Expansion funding. Part of the savings from the reduced cost of Phase 3 of the Sylvan Interchange project have are being used on this project. Also scheduled from this funding source is design and environmental impact analysis for expansion projects on Highway 217 between Highway 26 to Tualatin Valley Highway and Interstate 5 between Victory Boulevard and Lombard Street.

There are also reserve accounts identified for engineering and right-of-way acquisition for capacity projects (\$18.885 million from 2004 to 2007) and for expansion projects (\$20.069 million from 2006 to 2007). The strategy for identifying reserve accounts was to use the relatively small amount of capacity funds (relative to the average cost of a freeway capacity project) to potentially fill funding gaps for any new "high priority projects" identified by Congress in the expected update to the surface transportation authorization bill. At this time, however, the authorization bill has not emerged from the legislative process as originally scheduled. Prior to the allocation of these funds, ODOT will need to request an amendment to the State and Metropolitan TIPs to allocate these funds to a specific project(s).

\$1.87 million is programmed for preliminary engineering of the Highway 217 northbound widening project between Tualatin Valley Highway (Hwy 10) and Sunset Highway (US 26). This is the final phase of the Westside Corridor project that included capacity improvements to the Sunset Highway and the Westside light rail project.

Funding for planning work necessary to begin capacity projects has also been programmed in this MTIP. Funding of these planning efforts are critical as they are a necessary step in making projects eligible to seek funding, distinguishing their "project readiness" from other highway corridors that have not completed necessary planning and environmental analysis work.

\$200,000 of regional funding is provided to complete the Powell/Foster corridor study between Portland and Damascus/Gresham. Funding is also provided to complete the Highway 217 corridor study. These studies refine the Regional Transportation Plan by developing a multi-modal strategy to manage transportation in these corridors and develop design concepts for needed capacity improvements.

\$1 million of state funds have been programmed to complete state land-use exceptions findings for the Sunrise Corridor (I-205 to US 26) are programmed from state modernization funds and complement the Damascus/Boring Concept Plan to be completed in 2004. This potential project is also completing supplemental environmental impact work. \$2 million of state funding is also programmed to complete state land-use exceptions and preliminary design work for the I-5/99W Connector between Wilsonville and Sherwood. State land-use exceptions work are required for these projects, in addition to their identified purpose and need within the current Regional Transportation Plan, due to their location outside of the current urban growth boundary.

\$1 million of state funds have been programmed to begin environmental impact work on the I-5 North Trade Corridor. Completion of an environmental impact study is required prior to approval of a federal full funding grant agreement that defines federal participation in the engineering and construction of a potential project in this corridor.

Finally, \$500,000 of regional funding has been programmed to develop a corridor study that creates a multi-modal and design strategy for the next priority transportation

corridor as defined in the Regional Transportation Plan. These transportation corridors are generally located along major state highways in the region. The priority corridor will be selected through a regional prioritization process similar to the process that identified the current Powell/Foster and Highway 217 priority corridors.

Also scheduled for freeway capacity are some of the projects funded through the Oregon Transportation Investment Act (I and II). See section 2.1.3 and Table 4.2.6 below for a description of these projects.

### **2.1.2 ODOT Operations, Pavement, Bridge Preservation and Safety Program.**

The following projects from ODOT's programs not related to vehicle capacity projects are of special significance to the Metro region.

1. ODOT has maintained its scheduled FY 03 pavement and safety improvement of I-5 from the Capitol Highway to the Marquam Bridge. Estimated costs have increased from the \$12 million programmed in the FY 2000 MTIP to nearly \$20 million.
2. ODOT has also retained repaving of I-205 between the Columbia River Bridge and the Willamette River Bridge. The first phase (\$17.9 million), which includes the Columbia River Bridge itself, is scheduled to be complete in FY 05. The second phase (\$12.2 million) will be completed in FY 06.
3. ODOT is currently repainting the St. Johns Bridge (\$30.3 million) and will finish implementation in FY 04.
4. The \$33 million reconstruction of the MLK Viaduct in the City of Portland has slipped from FY 04 to FY 05. Another \$5.7 million of right of way costs have been identified and engineering has increased by nearly \$2 million from previously authorized levels.
5. Approximately \$8 million is authorized for seismic retrofit and deck work on the Burnside Bridge.
6. Approximately \$4 million is authorized for engineering and right-of-way acquisition for replacement of the Sauvie Island Bridge.
7. Pavement overlay of US 26 between the Ross Island Bridge and SE 50<sup>th</sup> Avenue in FY 04.
8. Pavement overlay of OR 47 between Quince Road and the Region 1 district boundary in FY 04.
9. Add a lane and widen structure on OR 224 between I-205 and SE Evelyn Street in FY 05.

10. Pavement overlay of OR 217 between the Sunset Highway (US 26) and SW 72<sup>nd</sup> Avenue in FY 06.
11. Pavement overlay of McLoughlin Boulevard (OR 99E) between SE Harold Street and Naef Road in FY 06. This will include the addition of bike lanes between SE Kellogg Creek and milepost 9.19 through supplemental funding from the bicycle/pedestrian program.
12. Pavement overlay of I-5 between Capitol Highway and the Tualatin River in FY 06.
13. Construct a continuous left turn lane on OR 213 between Conway Drive and Henrici Road in FY 07.
14. ODOT will invest approximately \$25 million during the Plan period in ramp metering, communications infrastructure, and computer hardware and software to manage traffic flow and reduce congestion.

### **2.1.3 ODOT Bond Program (OTIA)**

The OTIA I and II programs have allocated \$500 million of bond-financing for highway modernization and preservation throughout the state. Approximately \$97 million of these funds were allocated to 11 major highway and bridge modernization projects in the Portland area. Several tens of millions were allocated to a collection of smaller maintenance projects.

Projects of significance programmed in this MTIP include the widening of Highway 26 between Murray Boulevard and Cornell Road interchanges, a new interchange of US 26 at Jackson School Road and improvements at Cornelius Pass Road interchange, construction of a realigned roadway connecting Columbia Boulevard to Lombard Avenue and I-205, reconstruction of Sandy Boulevard between NE 13<sup>th</sup> Avenue and NE 47<sup>th</sup> Avenue, capacity and boulevard improvements to Powell Boulevard between 174<sup>th</sup> Avenue and Burnside, the widening of Sunnyside Road between 122<sup>nd</sup> Avenue and 152<sup>nd</sup> Avenue, pavement and signal work on McLoughlin Boulevard in downtown Milwaukie, first phase of rehabilitation and painting of the Broadway Bridge, a pavement overlay of Highway 8 through downtown Forest Grove, replacement of the existing bridge on Rood Bridge Road, and a pavement overlay of Boones Ferry Road between the Tualatin River Bridge and Norwood Road.

The Oregon Legislature recently approved another bond package known as OTIA III. Specific projects to be funded through this bond package have not yet been selected by the Oregon Transportation Commission.

## 2.2 REGIONAL TRANSIT

This MTIP updates a broad array of federal transportation funds dedicated to transit improvements throughout the region, which are summarized in Table 2.2-1, below. The MTIP does not report on TriMet or SMART general fund revenues.

Program Category	FY 04	FY 05	FY 06	FY 07	Total
Rail New Starts	\$88.90	\$78.85	\$78.00	\$78.75	\$324.50
Bus Purchases	\$2.70	\$2.05	\$1.38	\$1.38	\$7.51
Maintenance	\$34.22	\$35.38	\$36.54	\$37.70	\$143.84
Jobs Access – Reverse Commute	\$3.25	\$0.00	\$0.00	\$0.00	\$3.25
Dedicated Transit Total	\$127.91	\$119.53	\$119.85	\$121.77	\$428.10

The largest block of funds dedicated to transit improvements is the appropriations for construction of the Interstate light rail extension (\$117.85 million). Federal new starts funding will also be sought for the I-205 light rail (\$142 million) and Wilsonville to Beaverton commuter rail (\$59.25 million) projects within the time frame of this MTIP. As these funds have not yet been secured through the appropriations process, however, they are not programmed in the MTIP at this time.

TriMet received Section 5309 Discretionary, or “earmark” funds, in both 2001 and 2002 totaling about \$5.4 million for Park and Ride and Transit Center Improvements to the south Clackamas County transit corridor. TriMet has programmed \$2.48 million of these funds to purchase the Southgate Park & Ride in Milwaukie, and \$2.92 million dedicated to a bus and/or LRT transit center in the Clackamas Town Center area. As these improvements are associated with improvements studied as a part of the South Corridor high capacity transit improvements and will serve future light rail extensions to Clackamas and to Milwaukie, these funds are listed as a part of the Rail New Starts program category.

The second largest chunk of funds is \$143.8 million of formula funds that TriMet has proposed to spend on bus and light rail vehicle maintenance.

## 2.3 REGIONAL FLEXIBLE FUNDS

A key portion of the current regional flexible funds was approved in June 2003 upon adoption of Metro Resolution No. 03-3335, which allocated \$53.75 million of FY 06-07 STP and CMAQ funds. Regional flexible fund allocations approved in 2002 also contribute significantly to the overall program. Both sets of project allocations are shown in Appendix 7. (There are, in fact, some allocations dating back to 1993 that

remain eligible to obligate their funds that are reflected in the current four-year program.) The program approved in the current resolution (see Table 4.1-1) blends the newly allocated dollars with previously approved funds and updates the phasing, fund type and timing of all approved projects across all four years of the program.

### **2.3.1 Key Initiatives Awarded Regional Flexible Funds by Metro**

**Boulevards.** The 2000 RTP designates certain limited portions of the regional arterial network as a “Boulevard” street type. It is anticipated that local and regional resources will be focussed along these road segments to provide amenities such as wider sidewalks, bike lanes, street plantings and pedestrian buffer strips, planted median strips, special lighting and street furniture, building design features, curb extensions at more frequent cross walks, transit stop improvements, narrowed automobile travel lanes and reduced speed limits.

The Transportation Priorities 2004-07 regional flexible funding allocation provided \$4 million to two Boulevard projects on McLoughlin Boulevard in the Oregon City Regional Center and on 102<sup>nd</sup> Avenue in the Gateway Regional Center. Funding these types of projects emphasizes the commitment to stimulating economic development in the 2040 centers and increases the percentage of trips by non-auto modes. The previous Transportation Priorities allocation process included some \$3 million awarded to three new projects and supplemental funds to a fourth.

**Bike System Improvements.** The 2004-07 process allocated \$1.66 million to three trail system improvements; the Trolley Trail between the Gladstone and Milwaukie Town Centers, the Powerline trail connecting to the Merlo light rail station, and the Washington Square Regional Center trail.

The previous Transportation Priorities allocation provided \$1.0 million to create a bike lane crossing of the Morrison Bridge which has completed its design process and will enter construction in FY 05. The previous allocation process also gave over \$4.2 million to construct three bridges and associated street lanes to connect the Springwater and East Bank Trails. Completion of these projects will provide a continuous off-street connection from Willamette Park on the west shore of the river to Boring in rural East Multnomah County.

**Pedestrian Improvements.** One of the most profound ways Metro promotes strengthened pedestrian amenities throughout the region is by its development and inclusion in the RTP of multi-modal street design guidelines that must be considered when approving regionally significant facilities. These guidelines will ultimately leverage routine, broad ranging planning and capital investment by the region’s local and county governments to implement pedestrian enhancements. However, Metro also directly invests flexible funds in projects, typically ones that improve pedestrian connections in 2040 centers and to high-quality transit corridors. Almost all categories of transportation projects provide some improvement of the region’s pedestrian environment, since new and reconstructed streets provide new sidewalks. Also, most of Metro’s bike funds are

applied to multi-use facilities that also serve pedestrians. Boulevard projects are also intimately connected with improving the pedestrian environment and pedestrian-to-transit connections. And finally, in this Priorities Update, Metro invested \$3.23 million in three pedestrian projects, continuing the previous investment of \$1.4 million in eight pedestrian projects from the previous update that are reflected in this MTIP.

**Roadway, Freight and Intelligent Transportation Systems (ITS).** Allocation of funds to road projects focused on access to mixed-use and industrial areas to support economic development in those priority 2040 land use areas. The most recent allocation process awarded \$14.5 million in 11 projects. This includes preliminary engineering funding for projects to improve freight access from the north Portland industrial areas to I-5 and I-205 and access to industrial lands in South Washington County and to replace a sub-standard railroad under crossing that inhibits truck, bus, bike and pedestrian access to large industrial parcels and the Fairview Town Center. Funding was also approved to improve access to the Villibois site in Wilsonville and the developing Scholls Town Center. Construction of a project to improve circulation and reduce vehicle conflicts with light rail operations in the Hillsboro Regional Center was also funded.

Three reconstruction projects were also funded that will demonstrate innovative storm water management techniques that may be tested and duplicated across the region. Two of these projects are located on mixed-use 2040 main streets while the third is located in the Rockwood Town Center.

**Transit, Transit Oriented Development, and Regional Travel Options.** Metro recently increased and extended its commitment to supplement and leverage rail new starts funding by programming regional flexible funds to support the Interstate MAX project and South Corridor alternatives analysis and environmental work to \$8 million annually through the year 2015 for the I-205 light rail project, Wilsonville to Beaverton commuter rail project and to support development of the North Macadam area. The current MTIP honors this by allocation of \$16 million of regional funds through 2006 to complete the commitment for construction of Interstate MAX extension between the Rose Quarter and the Exposition Center in North Portland. (A contingency clause of Metro's agreement with TriMet could trigger allocation beyond 2006 if the schedule of federal appropriations is not met and borrowing costs increase.) Further policy decisions will be necessary to determine which of the three eligible projects listed above will receive funds in subsequent years of this MTIP.

In addition to the rail project funding, \$2.25 million was approved for capital improvements along frequent bus corridors in 2006-07 (where bus service is provided at 15-minute or better frequency all day, seven days a week). Improvements include shelters, real time schedule displays, pedestrian access improvements, and other amenities. This supplements approximately \$4 million approved for frequent bus improvements in the McLoughlin and Barber transit corridors in 2004-05. \$2 million was awarded for a new light rail station and adjacent development support at the Gresham Civic Station in Gresham.

The Transit Oriented Development (TOD) program was allocated \$4 million in 2006-07. This program has successfully increased densities, building orientation and pedestrian amenities in development surrounding light rail station areas. \$1 million of the \$4 million will expand the program to development support near frequent bus service. Table 4.1 lists only \$1 million of this allocation to the TOD program as \$3 million will be made available to the TriMet Preventive Maintenance program in exchange for TriMet general funds made available to the TOD program. As TriMet general funds are not reported in the MTIP, this fund exchange is tracked outside of this document.

The Regional Travel Options program was allocated \$2.7 million in 2006-07 to support programs that increase the percentage of trips by modes other than single occupant vehicles. These programs make more efficient use of the region's transportation infrastructure and land consumption for development.

# Chapter 3

# Planning and

# Programming Issues

**METRO**

PEOPLE PLACES  
OPEN SPACES

### 3.1 AIR QUALITY CONFORMITY WITH THE STATE IMPLEMENTATION PLAN

All transportation projects must be found consistent with the Oregon State Implementation Plan for air quality to maintain air quality standards in the Portland area. Metro has prepared a Conformity Determination that documents this finding; included in this MTIP as Appendix 1. The determination report finds that all projects advanced by the 2004-07 MTIP have been found by Metro to conform with the Oregon SIP for air quality.

It is also in the Determination report that the MTIP identifies, including allocation of regional funding to implement certain amounts of regionally significant bike and pedestrian system facilities each biennium and for an average annual increase of transit service by 1.5 percent in the region and in the Central City area.

Additionally, federal planning regulations require the MTIP to identify the project allocations that are responsive to funding the Transportation Control Measures required by the Portland Area ozone and carbon monoxide maintenance plans. Findings of compliance with the Transportation Control Measures is included in the Determination Report. The resolution adopting the air quality conformity report is included as Appendix 1. Specific project allocations that contribute to the execution of the control measures are listed below.

#### ***2004-07 MTIP Projects Implementing Transportation Control Measures for Air Quality***

##### Transit

- Interstate and I-205 MAX projects to implement requirement for development of north and south high capacity transit system in the Metro region, as required by the State SIP.
- Frequent Bus capital improvements (\$4.1 million in 04-05 and \$2.75 million in 06-07) provides service efficiencies and passenger amenities and allows TriMet to focus their general fund revenues on providing service to meet service hour improvements of 1.5% per year.

##### Pedestrian

- The Forest Grove town center pedestrian improvement project will be providing approximately 1.2 miles of new sidewalks.
- The Central Eastside Bridgeheads project will be creating new pedestrian crossings at the intersections of Grand Avenue and the Hawthorne, Morrison and Burnside bridges where pedestrian access is currently prohibited. It will also create a new pedestrian connection from Water Avenue to the Morrison Bridge, adding a total of approximately .3 miles of new pedestrian facilities.
- The St. Johns Town Center pedestrian improvements will improve pedestrian access at two intersections and reduce conflicts with truck movements.

- Molalla Avenue sidewalk improvements will provide new pedestrian facilities in Oregon City.
- The Washington County sidewalk improvements will provide new pedestrian facilities at four locations in the county.

### Bicycle

- The Trolley Trail project is funded for construction between Jefferson and Courtney Streets (1.6 miles) and for preliminary engineering to Glen Echo Street (additional 3.3 miles).
- The Beaverton Powerline trail project between the 158<sup>th</sup> Avenue light rail station and Schuepbach Park will construct 2.3 miles of multi-use trail.
- The Washington Square regional center trail project will construct a multi-use trail between Hall Boulevard and Highway 217 (.5 miles) and preliminary engineering to Greenberg Road (additional .5 miles).
- The Morrison Bridge bike/ped project will create a pathway .6 miles in length.
- The East Bank Trail – Springwater Corridor Bridge project will construct .3 miles of multi-use path to connect these facilities.
- The Fanno Creek Greenway Phase 2 project will construct .64 miles of multi-use path between Greenwood Inn and Scholls Ferry Road.
- The Gresham/Fairview Trail project will construct 1.36 miles of multi-use path between NE Halsey and E Burnside.
- The Oregon Department of Transportation will be creating 2.4 miles of new bike lanes on each side of McLoughlin Boulevard between Milwaukie and Concord Road in conjunction with a pavement overlay project.

## **3.2 FEDERAL TRANSPORTATION PLANNING FACTORS**

The TEA-21 requires MPO's to describe how their activities address seven planning factors identified in the plan. The MTIP is one of the MPO activities that needs to describe how those factors are addressed. The TEA-21 planning factors are:

- Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity and efficiency;
- Increase the safety and security of the transportation system for motorized and non-motorized users;
- Increase the accessibility and mobility options available to people and for freight;
- Protect and enhance the environment, promote energy conservation and improve quality of life;
- Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight;
- Promote efficient management and operations; and
- Emphasize the preservation of the existing transportation system.

Appendix 2 describes how these planning factors are addressed by this MTIP.

### **3.3 PUBLIC INVOLVEMENT**

Appendix 4 summarizes the public involvement processes for each of the state, regional transit and regional flexible funding allocations reported in this Update. The state public comment process preceded the Metro Update process in this round due to scheduling issues. ODOT and Metro staff attended each others public functions to provide information about the relationship of state projects with the MTIP Update. ODOT and Metro have committed to conducting a joint public outreach process for the next STIP and MTIP updates to increase public understanding of the relationship between the programs.

TriMet manages its own service and capital program update with separate events. TriMet staff attended the STIP and Transportation Priorities public outreach events to provide information about the relationship between those efforts and TriMet capital improvement and service planning work. Virtually all federal funds allocated to TriMet have been discussed as part of the MTIP update or are allocated in this action to maintenance activity.

### **3.4 ENVIRONMENTAL JUSTICE**

Appendix 6 summarizes the planning work completed during the Transportation Priorities 2004-07 process to respond to the provisions of the federal Environmental Justice Executive Order 12898. Year 2000 federal census data was used to develop information regarding the potential impacts and benefits of candidate projects. The relevant data was summarized and mapped for public comment meetings and decision makers to inform their decision process. The data was also used to condition approval of funds to applicant agencies on completing adequate outreach to affected low-income or ethnic communities. Federal guidance and regulations interpreting the Order's relationship to the MTIP have not been published at his time.

### **3.5 FAU AND INTERSTATE TRANSFER PROGRAM BALANCES**

The Federal Aid Urban (FAU) program was eliminated by passage of ISTEA in 1991. Balances remaining in the program were converted to STP funds. A number of old FAU projects remain on the books technically, but have been inactive for over five years. ODOT and sponsoring jurisdictions must close out these projects and inform Metro of the projects to which outstanding balances should be redirected. To retain track of the residual program authority, the table of inactive FAU funds is provided in Appendix 9, Table A9-6.

Similarly, the Interstate Transfer program retains some balance. ODOT and sponsoring jurisdictions must reach agreement about these balances before the program can be cancelled. The list of inactive accounts is provided in Appendix 9, Table A9-7.

Both of these programs remain part of the MTIP and are formally recognized to be part of the regional program. They have been segregated to the Appendices in order to

retain the document's priority focus on the program of active projects reported in the financial tables that follow in Chapter 4.

### **3.6 TRANSPORTATION PRIORITIES 2004-07 CONDITIONS OF PROJECT APPROVAL**

During adoption of the Transportation Priorities 2004-07 project allocation, and continuing conditions from the previous Transportation Priorities allocation process, JPACT and the Metro Council applied conditions to the allocation of funds to some projects. Appendix 7 lists these conditions.

### **3.7 LIST OF MAJOR PROJECTS IMPLEMENTED FROM THE PREVIOUS MTIP**

Federal regulations require discussion of significant projects that have been implemented from the previous MTIP. The listing below organizes these projects by their geographic location.

#### **Geographic Listing**

##### **Clackamas County**

- Sunnyside Road widening 107<sup>th</sup>-122<sup>nd</sup>. Right-of-way purchased and construction underway to widen facility to seven lanes.
- Sunnyside Road widening 122<sup>nd</sup>-172<sup>nd</sup>. PE to widen facility to five lanes.
- Clackamas County ITS/ATMS. Plans completed for implementation of arterial signal control improvements on major streets throughout county.

##### **East Multnomah County**

- Multnomah County/Gresham ITS Implementation Program, Phase 2
- Division Street Boulevard: Wallula/Kelly (PE/ROW)
- 223<sup>rd</sup> Railroad under crossing (PE/ROW)

##### **City of Portland**

- Burnside and Morrison Bridges electrical maintenance. Design and construction of the bridges electro-mechanical systems.
- Portland Arterial/Freeway ITS. Design and implementation of system to better integrate operation of freeway and adjacent arterial facilities.
- Bertha Boulevard: Capitol Highway to Vermont. Realigned intersection and improved pedestrian and bike facilities.
- Johnson Creek Boulevard: 36<sup>th</sup> to 45<sup>th</sup> (Phase 3). Road reconstruction with enhancement of pedestrian, bike and transit amenities.
- Broadway Bridge Rehabilitation, Phase 1
- Broadway Bridge Rehabilitation, Phase 2

## **Washington County**

- US 26: Camelot to Sylvan Interchange. Replaced structure and widened highway to six lanes.
- US 26: Hwy 217 to Murray Boulevard. PE and right-of-way purchased in preparation for widening of highway to six lanes.
- I-5/Nyberg Interchange. Preliminary engineering completed for widening of freeway over-crossing and southbound on-ramp.
- Washington County Commuter Rail Feasibility Analysis/PE.
- Fanno Creek Trail: Allen to Denney. Multi-use trail constructed.
- Hall Boulevard: SPRR to Ridgecrest. Bike lanes constructed.

## **Regional Transit**

- Interstate MAX construction (service begins May 2004).
- TOD projects; Russellville and Lloyd 2002 commercial and residential use projects, Gresham Civic station property acquisition.

### **3.8 DELAYS TO PLANNED IMPLEMENTATION**

Several projects to receive regional flexible funds have slipped from scheduled completion in 2003. These include:

- Cedar Creek Greenway Trail (Sherwood)
- Portland Bike Signage
- Fanno Creek Trail; Greenwood Inn to SW Scholls Ferry Road
- Hawthorne Boulevard improvements; SE 20<sup>th</sup> to SE 55<sup>th</sup>
- Gresham/Multnomah County ITS
- Scott Creek Lane Pedestrian Path
- Greely Street Bike Lanes; Madrona Park to Interstate Avenue
- Stark Street Boulevard PE; 190<sup>th</sup> to 197<sup>th</sup>
- Red Electric Line trail feasibility study
- Willamette Shoreline Rail/Trail study
- Molalla Avenue Sidewalk Infill (Oregon City)
- MLK/Grand/Interstate Avenues ITS
- SW Greenberg Road right-of-way acquisition; Washington Sq. Dr. to Tiedeman

### **3.9 IMPLEMENTATION OF ADA PARATRANSIT AND KEY STATION PLANS**

The Portland metropolitan region is aggressively implementing the requirements of the Americans with Disabilities Act in its transportation system. The following actions are examples of the region's commitment to meet the intent of the Act:

- The region completed an analysis and policy review and adopted a service strategy to provide transportation services to the elderly and disabled. This work resulted in policy to amend the RTP to ensure compliance with the plan elements by the

region's transportation service providers and system owners/operators.

- All TriMet light rail stations are fully ADA compliant. TriMet continues to review stations for accessibility issues and make adjustments to maintenance practices or designs where warranted.
- The paratransit LIFT program continues to grow at 8 percent annually. As a means of controlling costs associated with this level of growth and to expand travel options for its clients, TriMet is looking to promote use of the fixed route system where client capacities and travel needs allow.
- TriMet has extended its pioneering use of low-floor light rail vehicles with continued bus replacement using low floor buses. Bus stops on routes receiving these new buses are first screened for compatibility with the bus ramp on these new buses.
- TriMet continues to aggressively improve conditions at bus stops. New shelters have increased the total number of shelters from 640 shelters (7.5 percent of stops) in 1998 to 1,040 shelters in 2003 (12.2 percent of all stops). TriMet also continues to construct bus stops pads and curb cuts at appropriate locations. This program is funded through the regional MTIP - continuing through 2007.
- In 2002, TriMet opened a new LIFT operating facility at SE Powell Boulevard at I-205, adjacent to the fixed-route operating base, replacing fragmented facilities further to the south. The new facility is better located and more efficient for the storing, servicing and dispatching of LIFT vehicles to the region's eastside.
- The region supports within limited funding resources, development of the pedestrian infrastructure. The MTIP indeed provides funding to a category of pedestrian projects. These projects provide important access within neighborhoods and to public transportation. This is essential for both fully ambulatory citizens, but also to persons requiring mobility devices or assistance.

# Conformity Determination of the MTIP to the State Implementation Plan for Air Quality

BEFORE THE METRO COUNCIL

FOR THE PURPOSE OF DESIGNATION OF ) RESOLUTION NO. 03-3380A  
THE 2004 REGIONAL TRANSPORTATION )  
PLAN AS THE FEDERAL METROPOLITAN )  
TRANSPORTATION PLAN TO MEET ) Introduced by Councilor Park  
FEDERAL PLANNING REQUIREMENTS )

WHEREAS, federal law requires Metro to demonstrate every three years that its Regional Transportation Plan (“RTP”) conforms to the Clean Air Act; and

WHEREAS, the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency last found the RTP to conform to the requirements of the Clean Air Act on January 26, 2001; and

WHEREAS, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Boundary; and

WHEREAS, a post-adoption air quality analysis must demonstrate conformity with the federal Clean Air Act for continued federal certification; and

WHEREAS, the Metro Council has received and considered the advice of its Joint Policy Advisory Committee on Transportation and its Metro Policy Advisory Committee, and all proposed amendments identified in Exhibit “A” have been the subject of a public review period that began October 31, 2003, and ended December 10, 2003; and

WHEREAS, the Council held a public hearing on the 2004 RTP on December 4, 2003; now therefore,

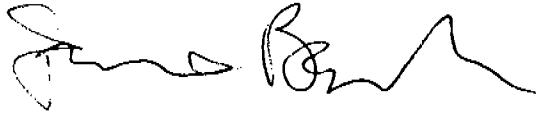

BE IT RESOLVED that the Metro Council:

1. The 2004 Regional Transportation Plan (“RTP”) shall be the federal Metropolitan Transportation Plan.
2. The map in Part 1 (Policy Update) of the 2004 Regional Transportation Plan Update shall be the Metropolitan Planning Organization Planning Area Boundary for purposes of the federal Metropolitan Transportation Plan.

3. The Chief Operating Officer shall revise the 2004 RTP, attached and incorporated into this resolution as Exhibit A (Parts 1, 2, and 3), as recommended by the Transportation Planning Advisory Committee to the Joint Policy Advisory Committee in "Summary of Public Comments: Receive October 31, 2003 through December 4, 2003," dated December 5, 2003, attached and incorporated into this resolution as Exhibit B, and in "Supplemental Public Comments: Received December 5, 2003 through December 10, 2003," dated December 11, 2003, attached and incorporated into this resolution as Exhibit C.

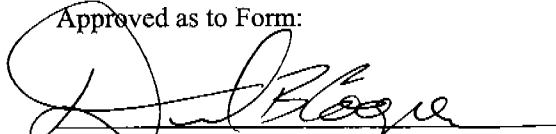

4. The Chief Operating Officer shall submit this resolution, the 2004 RTP and Resolution No. 03-3382 (the 2004 RTP/2004-07 MTIP Air Quality Conformity Determination), upon its adoption by the Council, to the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency prior to January 26, 2004, for review for acknowledgement that these documents conform with the requirements of the Clean Air Act.

ADOPTED by the Metro Council this 11<sup>th</sup> day of December 2003.

David Bragdon, Council President

Approved as to Form:

  
Daniel B. Cooper, Metro Attorney

# 2004 Regional Transportation Plan Policy Update

October 31, 2003

**METRO**  
PEOPLE PLACES  
OPEN SPACES

METRO

## 2004 Regional Transportation Plan Policy Highlights

### Recent Policy Amendments

Since the last update to the Regional Transportation Plan (RTP) in August 2000, a number of policy amendments have been adopted. These include:

- Oregon Land Conservation and Development Commission (LCDC) acknowledgement amendments (2001)
- TriMet's Elderly and Disabled Transit Study (2001)
- Regional Corridor Priorities project (2001)
- I-5 Partnership corridor study (2002)
- Metro's Green Streets project (2002)
- South Corridor Transit Study (2003).

These amendments to policies and policy maps have already been adopted by ordinance prior to this RTP update, and incorporated into the plan document.

### Proposed Policy Map Amendments

The proposed policy amendments for the 2004 Regional Transportation Plan are limited to several transportation system map changes. No changes to policy text are proposed as part of this update.

This policy packet details a number of proposed amendments to the Regional Street Design and Regional Freight System maps that reflect the Oregon Transportation Commission's interest in creating "special transportation areas" where compact urban centers and main streets are planned along state-owned arterial streets. *These proposed map changes are shown in the table in Attachment 1.*

The updated system maps also include a number of "housekeeping" amendments that reflect fine-tuning of the various model system maps, as recommended by local cities and counties through transportation plans adopted since the last RTP update in August 2000. *These changes are also summarized in Attachment 1.*

Finally, a new map is proposed to be added to Chapter 1 of the RTP that identifies the Metropolitan Planning Organization (MPO) Planning Boundary. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes. The boundary includes the area inside Metro's jurisdictional boundary, the 2003 urban growth boundary and the 2000 census defined urbanized area boundary for the Portland metropolitan region. *This map is shown in Attachment 2 (note: a larger version of this map is available from Metro upon request).*

**Metropolitan Planning Organization  
Planning Area Boundary**

- Urban growth boundary
- Metro boundary
- County lines
- MPO Planning Area Boundary
- Neighboring Cities
- AGMA Boundary

Projects located within the MPO planning area boundary must be included in Merto's Regional Transportation Plan and Metropolitan Transportation Improvement Program in order to be eligible for federal funding.

Transportation planning within the boundary can be eligible for federal funds when included in Metro's annual Planning Work Program

# How to Comment on the update to the 2004 Regional Transportation Plan

The public comment period for the 2004 Regional Transportation Plan (RTP) begins on October 31, 2003 and concludes with a public hearing on December 4, 2003. You may submit comments online at Metro's website:

[www.metro-region.org/rtp](http://www.metro-region.org/rtp)

Comments and questions may also be mailed using the form below, or left on Metro's Transportation hotline at (503) 797-1900, Option 2.

# 2004 Regional Transportation Plan Project Update

October 31, 2003

**METRO**  
PEOPLE PLACES  
OPEN SPACES

**METRO**

## 2004 Regional Transportation Plan Project Highlights

### Recent Project Amendments

Since the last update to the Regional Transportation Plan (RTP) in August 2000, the Metro Council adopted a number of project amendments that stem from transportation corridor studies, including:

- the I-5 Partnership corridor study (2002)
- the South Corridor Transit Study (2003).

These amendments have already been adopted by ordinance prior to this RTP update, and are included in the published RTP project lists.

### Proposed Project Amendments

The proposed project changes in the draft 2004 RTP combine the "Preferred" and "Priority" systems contained in the 2000 RTP as a single Preferred system of projects needed to serve the region over the 20-year planning period, through 2025. This proposed \$9.9 billion preferred system establishes the universe of projects eligible for inclusion in the \$4.2 billion subset of "Financially Constrained" projects that are eligible for federal funding.

The Financially Constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program (MTIP) and Metro's Transportation Priorities process. The MTIP allocates federal funds in the region, and is updated every two years, and includes a rolling, four-year program of transportation improvements. The 2003 Regional Transportation Plan will provide an updated set of financially constrained projects and programs for future MTIP funding allocations.

Metro worked with local cities and counties to develop a comprehensive inventory of regional transportation projects identified in local plans and special studies adopted since the 2000 RTP was completed. This inventory includes:

- new projects or studies that are not currently in the 2000 Regional Transportation Plan, but that have been adopted in local transportation system plans (TSPs) and regional corridor studies through a public process
- updates to existing 2000 RTP projects or studies to reflect changes in project location, description, cost and recommended timing

Nearly all city and county transportation plans in the Metro region have been updated during the past three years to be consistent with the 2000 RTP. In the process of completing these updates, many local plans identified new transportation projects of regional significance that are proposed as part of the draft 2004 RTP as amendments.

Some corridor studies that have been completed (or are nearing completion) since the last RTP update in August 2000 have been endorsed by resolution with the expectation that the new projects generated by these studies would be incorporated into the current RTP update. This includes the Powell/Foster Corridor Study, Phase 1.

Finally, the Pleasant Valley Concept Plan, Powell Boulevard Streetscape Study and the McLoughlin Boulevard Enhancement Plan were completed in 2003 with the expectation that new projects generated by these local planning efforts would be incorporated into the 2004 RTP. The recommendations endorsed in each of these efforts are also reflected in the enclosed draft amendments.

## How Projects Were Prioritized

In October, Metro staff worked with members of the Transportation Policy Alternatives Committee and other interested parties to update the RTP project lists. In a series of four half-day workshops, this effort focused on incorporating all "housekeeping" amendments generated by local plans that have been adopted since the RTP was approved in August 2000. Since Metro commented separately on all of these local plans during their respective adoption activities, friendly amendments that were consistent with RTP policies, had already been identified for most projects.

The principal focus of the TPAC workshops was to define an updated Financially Constrained system of improvements. This exercise is a federal requirement, and defines a subset of roughly half of the Preferred system projects that are demonstrated to conform to the federal Clean Air Act, and subsequently eligible for federal funds. The purpose of the exercise is to demonstrate that those projects most likely to be funded over the 20-year planning period will not result in a lapse in conforming to federal Clean Air Act standards for auto emissions.

Some notable differences in the 2004 RTP constraint exercise include a somewhat larger revenue projection for the constrained system through the new plan horizon year of 2025. Coupled with the fact that projects from the current plan have been built since it was adopted, this revenue increase results in a net gain in projects than can be included under the constraint ceiling. The expanded constrained revenue is largely the result of modest increases in local revenue sources devoted to regional transportation improvements, or revenues that reduce the backlog of maintenance obligations, which in turn expands the budget for capital projects.

There has also been an extensive discussion of factoring future Oregon Transportation Investment Act (OTIA) revenue into the forecast, but due to the limited timeframe for completing the RTP update, this assumption was not possible. Future OTIA revenues are expected to be incorporated into future state forecasts, and will be reflected in the next update to the RTP. However, the first three OTIAs are included in the forecast, and are part of the increased state revenue stream shown in the 2004 forecast amount.

The TPAC exercise followed the basic principles of (a) maintaining the Region 2040 Plan policy emphasis of the current RTP by focusing improvements in areas that serve as the economic engines for the region, including centers, ports and industrial areas, and (b)

maintaining a similar project balance among travel modes, including roads, transit, bikeways, pedestrian improvements and other project categories. Figure 1 is a summary of how the proposed 2004 RTP projects compare with the existing 2000 RTP according to these principles:

Figure 1  
Distribution of Financially Constrained System Projects

2040 Policy Emphasis (by number of projects)	2000 RTP	Draft 2004 RTP
Projects in Central City & Regional Centers	40%	60%
Projects in Industrial Areas and Ports	35%	17%
Projects in Town Centers & Main Streets	15%	17%
Projects in Other Areas	10%	7%

Balancing Modes of Transportation (by dollars)	2000 RTP	Draft 2004 RTP
Road & Bridge Projects	35%	46%
Bicycle & Pedestrian Projects	7%	9%
Transit Projects	55%	41%
Boulevard Projects	3%	4%

The shift in projects from industrial areas and ports to the central city and regional centers is partly due to a number of changes to the proposed transit improvements in the constrained system. While number of major transit projects have been completed since the 2000 RTP was adopted, such as the Central City Streetcar, Interstate MAX and Airport MAX projects, the major rail improvements planned for the south corridor to Clackamas and extensions of the Central City Streetcar will increase the emphasis of major transit service on serving regional centers and the central city.

Though the share of dollars devoted to transit projects appears to decline, the actual amount is similar to the 2000 RTP, and the change is instead due to growth in the road revenues. As the lower part of Figure 1 shows, road revenues are expected to increase beyond the 2000 projections at both the local and state level, boosting the share of road and bridge projects, relative to transit projects. These most expensive road improvements are concentrated in major corridors and centers that are traditional hubs of the transportation system, thus adding to the increase in share of projects serving the central city and regional centers.

The slight increase in bicycle, pedestrian and boulevard projects shown in Figure 1 reflect a continued emphasis on many specific projects carried over from the 2000 RTP system, as well as new revenues for such projects proposed by ODOT and several local jurisdictions. While the percentage devoted to these projects is comparatively low, the cost of bicycle and pedestrian projects, in particular, tend to be modest since they can often be constructed without purchasing right-of-way.

Table 1 of this packet provides a more detailed summary of the proposed project changes to the RTP Financially Constrained System, as developed by Metro and TPAC members. Table 2 is a comprehensive list of RTP projects that includes all Financially Constrained and Preferred system improvements.

## Timing of the RTP Update

This RTP update comes at a critical turning point on a number of technical fronts. First, the current plan is due to lapse in late January 2004 under federal planning regulations, and must be updated in order to ensure the continued flow of federal funds for RTP projects. Second, the air quality analysis tool used in the region will soon be replaced with a new "Mobile 6" model that still requires testing to determine whether the current mix of RTP projects could conform to the Clean Air Act.

Compounding the transition to a new air quality tool is the fact that the Oregon Department of Environmental Quality (DEQ) is embarking on an update to their Air Quality Maintenance Plan, a governing document for RTP air quality assessments. This effort is expected to take as much as two years, counting federal approval of the updated air quality plan. During this period, it could be difficult to add or change projects in the RTP, which underscores the importance of including critical projects in this RTP update, and completing the update well in advance of the January 2004 lapse date.

# How to Comment on the update to the 2004 Regional Transportation Plan

The public comment period for the 2004 Regional Transportation Plan (RTP) begins on October 31, 2003 and concludes with a public hearing on December 4, 2003. You may submit comments online at Metro's website:

[www.metro-region.org/rtp](http://www.metro-region.org/rtp)

Comments and questions may also be mailed using the form below, or left on Metro's Transportation hotline at (503) 797-1900, Option 2.

# Regional Transportation Plan Update Calendar

October 31	Public comment period begins; staff recommendation on draft 2004 RTP released for 30-day public comment period; draft RTP and conformity determination submitted to FHWA and FTA to begin review
November 3	Air quality conformity analysis begins
November 5	MTAC comments on draft 2004 RTP
November 12	MPAC comments on draft 2004 RTP
November 13	JPACT tentative action on draft 2004 RTP
November 13	Metro Council first reading of Ordinance on draft 2004 RTP
November 26	TPAC review and discussion of draft 2004 RTP and air quality conformity analysis
December 4	Public hearing on draft 2004 RTP; public comment period ends at 5 p.m.
December 5	TPAC special meeting to comment on draft 2004 RTP
December 10	Tentative final MPAC action on 2004 RTP
December 11	Tentative final JPACT action on 2004 RTP
December 11	Metro Council second reading of Ordinance and consideration of adoption of 2004 Regional Transportation Plan

## 2004 Regional Transportation Plan Technical Update Highlights

### Recent Technical Amendments

Since the last update to the Regional Transportation Plan (RTP) in August 2000, the Metro Council adopted a number of technical amendments that were mandated by the Oregon Land Conservation and Development Commission (LCDC) as part of the RTP acknowledgement process. These amendments were adopted in 2002, and are reflected in the published version of the RTP.

### Proposed Technical Amendments

Since the last RTP update, a number of corridor studies and concept plans for new urban areas have been completed, and approved by local or regional officials, or are about to be completed. The results of these studies include a number of technical changes to the RTP implementation chapter that frame future work that must still be completed, and delete technical requirements that have been addressed by these studies. The changes reflected in the proposed technical amendments include:

- Powell-Foster Corridor Study – Phase I Recommendations
- I-5 South – Wilsonville Area Study
- Regional Travel Option Strategic Planning
- RTP Modal Target Study
- Damascus/Boring Concept Plan
- Transportation Adequacy Policy – Transportation Planning Rule Requirements
- National Highway System (NHS) Routes Update

The proposed amendments are detailed in the attached strikethrough/underscore version of Chapter 6 of the 2000 Regional Transportation Plan. A number of other minor “housekeeping” edits are also shown in the proposed amendments to this chapter.

## CHAPTER 6

# Implementation

### 6.0 Introduction

The policies and transportation strategy in this plan reflect federal, state and regional planning requirements, while balancing the need for transportation improvements with increasingly limited funding. As such, the plan serves as a 20-year blueprint for transportation improvements in the region. However, there is much work to be done. Implementing this plan will require a cooperative effort by all jurisdictions responsible for transportation planning in the region, and will involve the following:

- adoption of regional policies and transportation strategies in local plans
- a concerted regional effort to secure needed funding to build planned transportation facilities and maintain and operate an expanded transportation system
- construction of the transportation improvements needed to serve expected growth and address existing safety concerns
- focusing strategic improvements that leverage key 2040 Growth Concept components
- periodic updates of the plan to respond to development trends and the associated changes in travel demand
- incorporating transportation solutions from corridor-level or subarea refinement plans
- ongoing monitoring for consistency with the local TSP development and other implementing agency plans, including the Oregon Department of Transportation's Six-Year Program and Tri-Met's Transit Development Plan

The transportation strategy described in Chapter 5 of the plan will not meet all of the region's 20-year transportation needs, but it is a significant first step towards achieving the preferred system. Instead, it represents a pragmatic balance between the need to maintain existing infrastructure and keep pace with expected growth in the region and the realities of limited transportation funding. As the region moves forward with implementation of this plan, a new paradigm for how we view the transportation system must evolve. Like other urban utilities, transportation infrastructure must increasingly be viewed as a scarce commodity that should be managed and allocated to reflect the growing cost and complexity of expanding the system.

This chapter describes the steps necessary to implement the plan, including:

- compliance with federal, state and regional planning requirements
- implementation of the plan through local TSPs

- relationship to the Metropolitan Transportation Improvement Plan
- process for updating and amending the plan
- process for completing refinement plans, and locations where refinement plans must be completed
- outstanding issues that cannot be addressed at this time, but must be considered in future updates to the plan

Following this chapter are other important resources for implementing the plan, including appendices that describe proposed transportation projects and strategies in more detail, and a separate background document that describes much of the methodology used to develop this plan.

## **6.1 Demonstration of Compliance with Federal Requirements**

### **6.1.1 Metropolitan Planning Required by TEA-21**

The metropolitan planning process outlined by Congress in the federal Transportation Equity Act for the 21st Century (TEA-21) establishes a cooperative, continuous and comprehensive framework for making transportation investment decisions in metropolitan areas throughout the United States. Program oversight is a joint FHWA/FTA responsibility. The federal planning requirements were originally promulgated as part of the 1992 federal Intermodal Surface Transportation Efficiency Act (ISTEA), and were substantially reaffirmed by TEA-21 in 1998.

Among the most significant continuing provisions of TEA-21 for the Metro region are the following planning requirements:

- Metro, in cooperation with the ODOT, Tri-Met and other transit operators, remain responsible for determining the best mix of transportation investments to meet metropolitan transportation needs.
- Metro is responsible for adopting the Regional Transportation Plan.
- Metro is responsible for adopting the MTIP. ODOT must include the MTIP without change in the STIP. The Governor is designated to resolve any disagreements between Metro's MTIP and ODOT's STIP.
- The RTP must provide a 20-year planning perspective, addressing air quality consistency, fiscal constraint and public involvement requirements established under the original ISTEA.
- The Oregon Department of Environmental Quality must adopt an Oregon State Implementation Plan (SIP). The SIP includes actions that must be adopted by Metro and results in an emissions budget for carbon monoxide and ozone. Metro must demonstrate

progress toward implementing the actions identified in the SIP and demonstrate conformity with the carbon monoxide and ozone emissions budget.

- A Congestion Management System (CMS) is required in larger metropolitan areas that are designated as air quality maintenance or non-attainment areas. The Portland metropolitan region was designated as a maintenance area in 1997. Highway projects that increase single-occupant vehicle capacity must be consistent with the CMS.
- The CMS continues the requirement that alternatives to motor vehicle capacity increases be evaluated prior to adding single-occupant vehicle projects.
- Federal Highway Administration and Federal Transit Administration certification of the planning process is required in larger metropolitan areas, including the Metro region.

TEA-21 consolidated the 16 planning factors from the original ISTEA into seven broad areas to be considered in the planning process (contained in section 1203(f) of the federal act). These factors are advisory, and failure to consider any one of the factors is not reviewable in court. However, the seven factors seek to:

- Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity and efficiency
- Increase the safety and security of the transportation system for motorized and non-motorized users
- Increase the accessibility and mobility options available to people and for freight
- Protect and enhance the environment, promote energy conservation and improve quality of life
- Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight
- Promote efficient system management and operation
- Emphasize the preservation of the existing transportation system

Each of these factors has been addressed through RTP policies identified in Chapter 1 of this plan and selection of the proposed transportation projects and programs identified in Chapter 3 of this plan. Specific sections that address the seven federal planning factors are detailed in the RTP Background Document.

In addition to changes to the ISTEA planning factors and scope of regional transportation planning, TEA-21 also modified several other elements of the federal ISTEA. Under the revised provisions, the Regional Transportation Plan must:

- Include operation and management of the transportation system in the general objectives of the planning process
- Address transportation planning area boundary relationship to non-attainment area boundaries; boundaries established on date of enactment remain as is, but future expansions of non-attainment area boundaries do not force expansion of transportation planning area unless agreed to by the Governor and Metro
- Coordinate with neighboring MPOs where a project crosses planning area boundaries
- Specifically identify freight shippers and users of public transit on the list of stakeholders to be given opportunity to comment on plans and TIPs
- Cooperate with ODOT and transit agencies in the development of financial estimates that support plan and TIP development
- Identify projects that will be implemented within a forecast of revenues that can be reasonably expected to be available over the life of the Regional Transportation Plan. The Regional Transportation Plan may also include additional projects that may be identified for illustrative purposes, and would be included in plans and TIPs if additional resources were available. Additional action by ODOT, Metro and the Secretary of Transportation is required to advance such projects

The RTP meets the TEA-21 provisions through its policies and project selection criteria. A summary of RTP compliance with these provisions is included in the RTP Background Document.

#### 6.1.2 Air Quality Conformity: Criteria that Constitutes a Conformed Plan

The ~~2020~~2025 Preferred ~~and Priority~~-Systems ~~both~~ requires new revenue sources and go beyond federal requirements that long-range transportation plans be based upon "constrained resources." Air quality conformity of this plan will be based on a scaled-down ~~2020~~2025 Priority-Preferred System that can likely be implemented within the federally defined fiscally constrained level of reasonably available resources. This system will be termed the ~~2020~~2025 Fiscally-Financially Constrained System. Air quality conformity entails:

- Making reasonable progress on Transportation Control Measures as identified in the SIP
- Staying within the carbon monoxide and ozone emissions budgets set for transportation with the SIP based upon a fiscally constrained transportation network

Portland is currently designated a maintenance area for the National Ambient Air Quality Standards (NAAQS) for ozone and carbon monoxide under the Clean Air Act Amendments of 1990.

### 6.1.3 Demonstration of Air Quality Conformity

~~The Financially Constrained System and the 2020 Priority System have been found to conform to federal air quality requirements. Appendix 4.0 provides detailed information to support this finding on the air quality conformity analysis to be completed on the 2025 Financially Constrained System.~~

## 6.2 Demonstration of Compliance with State Requirements

This section identifies the applicable state regulations for the regional transportation system plan and identifies the corresponding provisions contained in this RTP. Findings of Fact and Conclusions of Law explaining TPR compliance, ~~which were will be~~ adopted with the ~~2000-2004~~ RTP, ~~are found and will be included~~ in Appendix 5.0.

### 6.2.1 System Plan Required by Oregon Transportation Planning Rule

The Oregon Transportation Planning Rule (TPR) sets forth a number of requirements for Metro's Transportation System Plan (TSP). This RTP has a number of purposes. This Plan is adopted as the regional functional plan for transportation and the federal metropolitan transportation plan, as well as the regional TSP under state law. The RTP as regional TSP, must address provisions of Oregon Administrative Rule 660.012.000 applicable to regional TPSs.

The following TPR provisions are addressed in the portions of this multipurpose plan indicated under each applicable TPR requirement. Together, these portions of the ~~2000-2004~~ RTP comprise the regional TSP. Other portions of the RTP not indicated under the applicable TPR requirement address regional and federal planning issues beyond the regional TSP under this administrative rule.

- **660.012.0015(2) - MPOs shall prepare TSPs in compliance with TPR**  
*Metro is required to prepare a Transportation System Plan (TSP) for facilities of regional significance within Metro's jurisdiction. The portions of the ~~2000-2004~~ RTP which constitutes the regional transportation system plan are provisions of Chapters 1, 2, 5, 6 and the Appendix which address regional TSP issues, including the priority system of improvements.*
- **660.012.0020 - TSP adequately serves regional transportation needs**  
*The RTP fully addresses this requirement by identifying the region's 20-year transportation needs in Chapter 2, including the future motor vehicle, public transportation, bicycle, pedestrian and freight system improvements, and complementary demand management, parking and financing programs in Chapter 5 adequate to respond to these identified needs.*
- **660.012.0025 - Complying with Statewide Planning goals**  
*This is the first regional TSP adopted in the metro region. As such, the ~~2000-2004~~ RTP identifies transportation needs for regional facilities for the purpose of informing regional and local transportation and land-use planning. In some cases where a need has been established, decisions regarding function, general location and mode are deferred to a*

refinement plan or local TSP. In these cases, the findings in Chapter 5 describe how these needs are met for the purpose of RTP analysis, and Sections 6.7.5 and 6.7.6 of this chapter establish the need for refinement planning, and base assumptions for specific refinement plans that are needed to ensure consistency with the RTP.

- **660.012.0025(3) - Refinement plans allowed**

A number of refinement plans are proposed in the 2000 RTP, including 16 corridor plans and three area plans. Section 6.7 of this chapter describes the purpose and scope of refinement plans.

- **660.012.0030 - Determination of transportation needs**

The project development phase of the ~~2000-2004~~ RTP followed the congestion management requirements of Section 6.6.3 of this chapter, which incorporates the TPR requirements for determining transportation needs.

- **660.012.0035 - Transportation system evaluation required**

This ~~2000-2004~~ RTP represents a minor update to the 2000 RTP, which was is built on an extensive foundation of modeling and analysis. The Region 2040 project included five separate land use and transportation scenarios, including the alternative adopted and acknowledged in the 1995 Regional Urban Growth Goals and Objectives as the 2040 Growth Concept. A detailed transportation system was developed and modeled for each scenario, and the lessons learned from this effort were the starting point for the 2000 RTP update. Next, a level-of-service alternatives analysis was developed to further refine the region's system performance standards. Finally, the system development component of the 2000 RTP update included four separate rounds of modeling and analysis that combined the principles of the Region 2040 project and the level of service analysis.

For the purpose of complying with this requirement, the ~~Priority-Preferred~~ System in Chapter ~~5-3~~ of the ~~2000-2004~~ RTP establishes a scale of the improvements that are adequate to meet state and regional travel needs in the Metro area, including the needs of the disadvantaged, the movement of goods and the protection of farm and forest resources within rural reserves.

- **660.012.0035(4) - Reduction in vehicle miles traveled per capita**

The ~~2000-2004~~ RTP addresses this requirement through the non-SOV modal targets set forth in Table 1.3 of this plan. The modal targets are linked to the 2040 Growth Concept, and if met, would result in satisfying the required 10 percent reduction in vehicle miles traveled per capita over the 20-year plan period. The non-SOV modal targets set the context for transportation improvements proposed in this plan. The analysis in Chapter 5 establishes that the region is making substantial progress toward meeting this TPR requirement, though the modal targets would not be met in all areas, due to the relative state of urbanization at the conclusion of the planning period. Areas with the greatest concentration of mixed-use development and quality transit service will easily meet the targets, while areas that are still developing are expected to meet the targets beyond the 20-year plan period.

*These findings represent the good faith effort required to comply with this element of the TPR. An outstanding issue in Section 6.8.10 of this chapter directs future updates of the RTP to expand on alternative measures that both comply with the TPR, and improve on the plan's ability to identify appropriate transportation projects to meet identified needs.*

- **660.012.0035(6) - Measures and objectives required for non-auto travel**

*The non-SOV modal targets in Table 1.3 of this plan provide the basic framework for compliance with this TPR provision, which requires a number of measures for demonstrating reduced reliance on the automobile. Other policies in Chapter 1 of this plan complement the non-SOV modal targets, and findings in Chapter 5-3 of this plan demonstrate a reduced reliance on the automobile based on the proposed system improvements.*

- **660.012.0040 - Transportation funding program**

*The project descriptions in Appendix 1.1 and financial analysis in Chapter 4 of this plan satisfy the various TPR transportation funding requirements. Benchmarks in Section 6.5.3 of this chapter will address TPR requirements for implementation of the RTP through the MTIP.*

- **660.012.0050 - Transportation project development**

*Section 6.7 of this chapter establishes the regional project development requirements for improvements included in the RTP. These and other related requirements are consistent with TPR provisions for project development.*

Metro's adoption of the ~~2000-2004~~RTP provisions that address these applicable provisions of the TPR establishes the regional TSP for the Metro region. Through the consistency review process, local TSPs will be evaluated to ensure that local strategies needed to satisfy the above regional planning requirements are implemented. However, local TSPs are not required to make specific findings on these TPR provisions for the regional system, since the RTP establishes compliance for the Metro region. Appendix 5.0 ~~will~~ includes full findings of compliance with the TPR.

## **6.2.2 Regional TSP Provisions Addressed Through Local TSPs**

The ~~2000-2004~~ RTP establishes compliance for regional TSP requirements with the policies, projects and financial analysis contained in this plan. Local consistency with the ~~2004-2000~~ RTP is described in Section 6.4.1. However, implementation of some regional TSP requirements will occur only through local implementation of RTP policies. These include adoption of the modal targets specified in Policy 19.0 of Chapter 1, and in parking management requirements contained in Title 2 of the Urban Growth Management Functional Plan. Local adoption of the Chapter 1 modal targets is necessary to demonstrate compliance with the VMT/Capita reduction findings described in Chapter 5-3 of the plan.

## **6.2.3 Special Designations in the Oregon Highway Plan (OHP)**

The Oregon Highway Plan (OHP) establishes three special district designations for certain areas along state-owned facilities. The purpose of the designations is to respond to unique community access and circulation needs, while maintaining statewide travel function. Though these special districts are generally identified jointly between ODOT and local jurisdictions, the RTP establishes

a policy framework that supports these OHP designations through the 2040 Growth Concept and corresponding regional street design classifications contained in Section 1.3.5. The following is a summary of how RTP street design designations correspond to the OHP special district classifications:

- ***Special Transportation Area (STA)***: This designation is intended to provide access to community activities, businesses and residences along state facilities in a downtown, business district or community center. In these areas, the OHP acknowledges that local access issues outweigh highway mobility, except on certain freight routes, where mobility needs are more balanced with local access.

The RTP addresses this OHP designation through the boulevard design classifications, located in the 2040 central city, regional center, town center and main street land use components. In the Metro region, state routes designated as boulevards that also meet other standards as defined in the OHP, are eligible to be designated STAs. Further, the application of the boulevard design classifications also factors in major freight corridors, and this design classification is generally not applied to such routes.

- ***Commercial Center***: This designation applies to relatively large (400,000 square feet) commercial centers located along state facilities. In these areas, the OHP allows for consolidate access roads or driveways that serve these areas, but such access is subject to meeting OHP mobility standards on the state highway serving the center. If the center has consolidated access roads and meets other OHP standards, the OHP mobility standard may be reduced.

The RTP supports this OHP designation with the throughway design classifications, which include freeway and highway design types. The throughway designs are mobility-oriented, and generally apply to routes that form major motor vehicle connections between the central city, regional centers and intermodal facilities. The throughway design classifications support the concept of limiting future access on a number of state facilities in the region that are designated as principal routes in the RTP.

- ***Urban Business Area (UBA)***: This designation recognizes existing commercial strips or centers along state facilities with the objective of balancing access need with the need to move through-traffic.

In the Metro region, these areas are generally designated as mixed-use corridors and neighborhoods in the 2040 Growth Concept, and a corresponding regional or community street design classification in the RTP which calls for a balance between motor vehicle mobility, and local access. These designs are multi-modal in nature, and include transit, bicycle and pedestrian design features, consistent with the OHP designation. The regional and community street classification can also be found in some regional and town centers, and where these are state routes, the facility is eligible for the OHP designation of Urban Business Area.

## 6.2.4 Compliance with State Requirements

### *Compliance with Statewide Planning Goals*

Together, the RTP and city and county TSPs that implement the RTP will constitute the land use decision about need, mode, and function and general location of planned transportation facilities and improvements shown in the RTP. As the regional transportation system plan, the RTP constitutes the land use decision about need, mode and function of planned transportation facilities and improvements. The RTP also identifies the general location of planned transportation facilities and improvements.

The land use decision specifying the general location of planned regional transportation facilities and improvements will be made by cities and counties as they develop and adopt local TSPs that implement the RTP. While the specific alignment of a project may be incorporated into a TSP, such decisions are subject to the project development requirements in Section 6.7, and must include findings of consistency with applicable statewide planning goals, as described below.

In preparing and adopting local TSPs, cities and counties will prepare findings showing how specific alignment of planned regional facilities or general location or specific alignment of local facilities is consistent with provisions of the RTP, acknowledged comprehensive plans and applicable statewide planning goals, if any. If the actual alignment or configuration of a planned facility proposed by a city or county is inconsistent with the general location of a facility in the RTP, the process described in Section 6.4 to resolve such issues shall be used prior to a final land use decision by a city or county.

This section describes how cities and counties will address consistency with applicable local comprehensive plans and statewide planning goals.

### *General Location of Planned Transportation Facilities*

Maps included in the RTP illustrate the general location of planned transportation facilities and improvements. For the purposes of this plan, the general location of transportation facilities and improvements is the location shown on maps adopted as part of this plan and as described in this section. Where more than one map in the RTP shows the location of a planned facility, the most detailed map included in the plan shall be the identified general location of that facility.

Except as otherwise described in the plan, the general location of planned transportation and facilities is as follows:

For new facilities, the general location includes a corridor within 200 feet of the location depicted on the maps included within the RTP. For interchanges, the general location corresponds to the general location of the crossing roadways. The general location of connecting ramps is not specified. For existing facilities that are planned for improvement the general location includes a corridor within fifty feet of the existing right-of-way. For realignments of existing facilities the general location includes a corridor within 200 feet of the segment to be realigned, measured from the existing right-of-way or as depicted on the plan map.

Local transportation system plans and project development are consistent with the RTP if a planned facility or improvement is sited within the general location shown on the RTP maps and described

above in this section. Cities and counties may refine or revise the general location of planned facilities as they prepare local transportation system plans to implement the RTP. Such revisions may be appropriate to lessen project impacts, or to comply with applicable requirements in local plans or statewide planning goals. A decision to authorize a planned facility or improvement outside of the general location shown and described in the RTP requires an amendment to the RTP to revise the proposed general location of the improvement.

*Transportation Facilities and Improvements authorized by existing acknowledged comprehensive plans*

New decisions are required to authorize transportation facilities and improvements included in the RTP that are not authorized by the relevant jurisdiction's acknowledged comprehensive plan on August 10, 2000. Many of the facilities and improvements included in the RTP are currently authorized by the existing, acknowledged comprehensive plans. Additional findings demonstrating consistency with an acknowledged plan or the statewide planning goals are required only if the facility or improvement is not currently allowed by the jurisdiction's existing acknowledged comprehensive plan. Additional findings would be required if a local government changes the function, mode or general location of a facility from what is currently provided for in the acknowledged comprehensive plan.

*Applicability of Statewide Planning Goals to decisions about General Location*

Several statewide planning goals include "site specific" requirements that can affect decisions about the general location of planned transportation facilities. These include:

- Goal 5      Open Spaces, Scenic, Historic and Natural Resources
- Goal 7      Natural Hazards and Disasters
- Goal 9      Economic Development, as it relates to protection of sites for specific uses (i.e. such as sites for large industrial uses)
- Goal 10     Housing, as it relates to maintaining a sufficient inventory of buildable lands to meet specific housing needs (such as the need for multi-family housing)
- Goal 15     Willamette River Greenway

Generally, compliance with the goals is achieved by demonstrating compliance with an acknowledged comprehensive plan. If City and county plans have been acknowledged to comply with the Goals and related rules, a planned improvement consistent with that plan is presumed to comply with the related goal requirement. Cities and counties may adopt the general location for needed transportation improvements, and defer findings of consistency with statewide planning goals to the project development phase. However, specific alignment decisions included in a local TSP must also include findings of consistency with applicable statewide planning goals.

In some situations, the Statewide Planning Goals and related rules may apply in addition to the acknowledged plan. This would occur, for example, if the jurisdiction is in periodic review, or an adopted statewide rule requirement otherwise requires direct application of the goal. Cities and

counties will assess whether there are applicable goal requirements, and adopt findings to comply with applicable goals, as they prepare local transportation system plans to implement the regional transportation plan.

If in preparing a local TSP, a city or county determines that the identified general location of a transportation facility or improvement is inconsistent with an applicable provision of its comprehensive plan or an applicable statewide planning goal requirement, it shall:

- propose a revision to the general location of the planned facility or improvement to accomplish compliance with the applicable plan or goal requirement. If the revised general location is outside the general location specified in the RTP, this would require an amendment to the RTP; or
- propose a revision to the comprehensive plan to authorize the planned improvement within the general location specified in the RTP. This may require additional goal findings, for example, if a goal-protected site is affected.

#### *Effect of an Approved Local TSP on Subsequent Land Use Decisions*

Once a local TSP is adopted and determined to comply with the RTP and applicable local plans and statewide planning goals, the actual alignment of the planned transportation facility or improvement is determined through the project development process. Subsequent actions to provide or construct a facility or improvement that are consistent with the local TSP may rely upon and need not reconsider the general location of the planned facility.

Additional land use approvals may be needed to authorize construction of a planned transportation improvement within the general location specified in an adopted local transportation system plan. This would occur if the local comprehensive plan and land use regulations require some additional review to authorize the improvement, such as a conditional use permits. Generally, the scope of review of such approvals should be limited to address siting, design or alignment of the planned improvement within the general location specified in the local TSP.

### **6.3 Demonstration of Compliance with Regional Requirements**

In November 1992, the voters approved Metro's Charter. The Charter established regional planning as Metro's primary mission and required the agency to adopt a Regional Framework Plan (RFP). The plan was subsequently adopted in 1997, and now serves as the document that merges all of Metro's adopted land-use planning policies and requirements. Chapter 2 of the Regional Framework Plan describes the different 2040 Growth Concept land-use components, called "2040 Design Types," and their associated transportation policies. The Regional Framework Plan directs Metro to implement these 2040 Design Types through the RTP and Metropolitan Transportation Improvement Program (MTIP). These requirements are addressed as follows:

- Chapter 1 of the updated RTP has been revised to be completely consistent with applicable framework plan policies, and the policies contained in Chapter 1 of this plan incorporate all of the policies and system maps included in Chapter 2 of the framework plan. These policies served as a starting point for evaluating all of the system improvements proposed in this plan, and the findings in Chapter 3 and 5 of the

RTP demonstrate how the blend of proposed transportation projects and programs is consistent with the Regional Framework Plan and 2040 Growth Concept.

- The MTIP process has also been amended for consistency with the Regional Framework Plan. During the Priorities 2000 MTIP allocation process, project selection criteria were based on 2040 Growth Concept principles, and funding categories and criteria were revised to ensure that improvements critical to implementing the 2040 Growth Concept were adequately funded.

| Prior to completion of ~~this updated~~the 2000 RTP, several transportation planning requirements were included in the *Urban Growth Management Functional Plan* (UGMFP), which was enacted to address rapid growth issues in the region while the Regional Framework Plan and other long-range plans were under development. ~~This~~The 2000 RTP ~~now replaces replaced~~ and expanded~~s~~ the performance standards required for all city and county comprehensive plans in the region contained in Title 6 of the UGMFP. See Sections 6.4.4 through 6.4.7, 6.6, 6.6.3 and 6.7.3. In addition, parking policies contained in this plan were developed to complement Title 2 of the UGMFP, which regulates off-street parking in the region. See Section 1.3.6, Policy 19.1. Therefore, this RTP serves as a discrete functional plan that is both consistent with, and fully complementary of the UGMFP.

| To ensure consistency between the ~~2000-2004~~RTP and local transportation system plans (TSPs), Metro shall develop a process for tracking local TSP project and functional classification refinements that are consistent with the RTP, and require a future amendment to be incorporated into the RTP. Such changes should be categorized according to degrees of significance and impact, with major changes subject to policy-level review and minor changes tracked administratively. This process should build on the established process of formal comment on local plan amendments relevant to the RTP.

## 6.4 Local Implementation of the RTP

### 6.4.1 Local Consistency with the RTP

The comprehensive plans adopted by the cities and counties within the Metro region are the mechanisms by which local jurisdictions plan for transportation facilities. These local plans identify future development patterns that must be served by the transportation system. Local comprehensive plans also define the shape of the future transportation system and identify needed investments. All local plans must demonstrate consistency with the RTP as part of their normal process of completing their plan or during the next periodic review. Metro will continue to work in partnership with local jurisdictions to ensure plan consistency.

| The ~~2000-2004~~RTP is Metro's regional functional plan for transportation. Functional plans by state law include "recommendations" and "requirements." The listed RTP elements below are all functional plan requirements. Where "consistency" is required with RTP elements, those elements must be included in local plans in a manner that substantially complies with that RTP element. Where "compliance" is required with RTP elements, the requirements in those elements must be included in local plans as they appear in the RTP.

For inconsistencies, cities and counties, special districts or Metro may initiate the dispute resolution process detailed in this chapter prior to action by Metro to require an amendment to a local comprehensive plan, transit service plan or other facilities plan. Specific elements in the 2000 RTP that require city, county and special district compliance or consistency are as follows:

- Chapter 1 *Consistency with policies, objectives, motor vehicle level-of-service measure and modal targets, system maps and functional classifications including the following elements of Section 1.3:*
- *regional transportation policies 1 through 20 and objectives under those policies*
  - *all system maps (Figures 1.1 through 1.19, including the street design, motor vehicle, public transportation, bicycle, pedestrian and freight systems)*
  - *motor vehicle performance measures (Table 1.2), or alternative performance measures as provided for in Section 6.4.7(1)*
  - *regional non-SOV modal targets (Table 1.3)*
- Chapter 2 *Consistency with the ~~2020~~2025 population and employment forecast contained in Section 2.1 and 2.3, or alternative forecast as provided for in Section 6.4.9 of this chapter, but only for the purpose of TSP development and analysis.*
- Chapter 6 *Compliance with the following elements of the RTP implementation strategy:*
- *Local implementation requirements contained in Section 6.4*
  - *Project development and refinement planning requirements and guidelines contained in Section 6.7*

For the purpose of local planning, all remaining provisions in the RTP are recommendations unless clearly designated in this section as a requirement of local government comprehensive plans. All local comprehensive plans and future amendments to local plans are required by state law to be consistent with the adopted RTP. For the purpose of transit service planning, or improvements to regional transportation facilities by any special district, all of the provisions in the RTP are recommendations unless clearly designated as a requirement. Transit system plans are required by federal law to be consistent with adopted RTP policies and guidelines. Special district facility plans that affect regional facilities, such as port or passenger rail improvements, are also required to be consistent with the RTP.

The state Transportation Planning Rule (TPR) requires most cities and counties in the Metro region to adopt local Transportation System Plans (TSPs) in their comprehensive plans. These local TSPs are required by the TPR to be consistent with the RTP policies, projects and performance measures identified in this section.

#### **6.4.2 Local TSP Development**

Local TSPs must identify transportation needs for a 20-year planning period, including needs for regional travel within the local jurisdiction, as identified in the RTP. Needs are generally identified either through a periodic review of a local TSP or a specific comprehensive plan amendment. Local TSPs that include planning for potential urban areas located outside the urban growth boundary shall also include project staging that links the development of urban infrastructure in these areas to future expansion of the urban growth boundary. In these areas, local plans shall also prohibit the construction of urban transportation improvements until the urban growth boundary has been expanded and urban land use designations have been adopted in local comprehensive plans.

Once a transportation need has been established, an appropriate transportation strategy or solution is identified through a two-phased process. The first phase is system-level planning, where a number of transportation alternatives are considered over a large geographic area such as a corridor or local planning area, or through a local or regional Transportation System Plan (TSP). The purpose of the system-level planning step is to:

- consider alternative modes, corridors, and strategies to address identified needs
- determine a recommended set of transportation projects, actions, or strategies and the appropriate modes and corridors to address identified needs in the system-level study area

The second phase is project-level planning (also referred to as project development), and is described separately in this chapter in Section 6.7.

Local TSP development is multi-modal in nature, resulting in blended transportation strategies that combine the best transportation improvements that address a need, and are consistent with overall local comprehensive plan objectives.

#### **6.4.3 Process for Metro Review of Local Plan Amendments, Facility and Service Plans**

Metro will review local plans and plan amendments, and facility plans that affect regional facilities for consistency with the RTP. Prior to adoption by ordinance, local TSPs shall be reviewed for consistency with these elements of the RTP. Metro will submit formal comment as part off the adoption process for local TSPs to identify areas where inconsistencies with the RTP exist, and suggest remedies.

Upon adoption of a local TSP, Metro will complete a final consistency review, and a finding of consistency with applicable elements of the RTP will be forwarded to the state Department of Land Conservation and Development (DLCD) for consideration as part of state review of local plan amendments or local periodic review. A finding of non-compliance for local TSPs that are found to be inconsistent with the RTP will be forwarded to DLCD if conflicting elements in local plans or the RTP cannot be resolved between Metro and the local jurisdiction.

The following procedures are required for local plan amendments:

1. When a local jurisdiction or special district is considering plan amendments or facility plans which are subject to RTP local plan compliance requirements, the jurisdiction shall forward the proposed amendments or plans to Metro prior to public hearings on the amendment.
2. Within four weeks of receipt of notice, the Transportation Director shall notify the local jurisdiction through formal written comment whether the proposed amendment is consistent with RTP requirements, and what, if any, modifications would be required to achieve consistency. The Director's finding may be appealed by both the local jurisdiction or the owner of an affected facility, first to JPACT and then to the Metro Council.
3. A jurisdiction shall notify Metro of its final action on a proposed plan amendment.
4. Following adoption of a local plan, Metro shall forward a finding of consistency to DLCD, or identify inconsistencies that were not remedied as part of the local adoption process.

#### **6.4.4 Transportation Systems Analysis Required for Local Plan Amendments**

This section applies to city and county comprehensive plan amendments or to any local studies that would recommend or require an amendment to the Regional Transportation Plan to add significant single occupancy vehicle (SOV) capacity to the regional motor vehicle system, as defined by Figure 1.12. This section does not apply to projects in local TSPs that are included in the ~~2000-2004~~ RTP. For the purpose of this section, significant SOV capacity is defined as any increase in general vehicle capacity designed to serve 700 or more additional vehicle trips in one direction in one hour over a length of more than one mile. This section does not apply to plans that incorporate the policies and projects contained in the RTP.

Consistent with Federal Congestion Management System requirements (23 CFR Part 500) and TPR system planning requirements (660-12), the following actions shall be considered when local transportation system plans (TSPs), multi-modal corridor and sub-area studies, mode specific plans or special studies (including land-use actions) are developed:

1. Transportation demand strategies that further refine or implement a regional strategy identified in the RTP
2. Transportation system management strategies, including intelligent Transportation Systems (ITS), that refine or implement a regional strategy identified in the RTP
3. Sub-area or local transit, bicycle and pedestrian system improvements to improve mode split
4. The effect of a comprehensive plan change on mode split targets and actions to ensure the overall mode split target for the local TSP is being achieved

5. Improvements to parallel arterials, collectors, or local streets, consistent with connectivity standards contained in Section 6.4.5, as appropriate, to address the transportation need and to keep through trips on arterial streets and provide local trips with alternative routes
6. Traffic calming techniques or changes to the motor vehicle functional classification, to maintain appropriate motor vehicle functional classification
7. If upon a demonstration that the above considerations do not adequately and cost-effectively address the problem, a significant capacity improvement may be included in the comprehensive plan

Upon a demonstration that the above considerations do not adequately and cost-effectively address the problem and where accessibility is significantly hindered, Metro and the affected city or county shall consider:

1. Amendments to the boundaries of a 2040 Growth Concept design type
2. Amendments or exceptions to land-use functional plan requirements
3. Amendments to the 2040 Growth Concept
4. Designation of an Area of Special Concern, consistent with Section 6.7.7.

Demonstration of compliance will be included in the required congestion management system compliance report submitted to Metro by cities and counties as part of system-level planning and through findings consistent with the TPR in the case of amendments to applicable plans.

#### **6.4.5 Design Standards for Street Connectivity**

The design of local street systems, including “local” and “collector” functional classifications, is generally beyond the scope of the 2000 RTP. However, the aggregate effect of local street design impacts the effectiveness of the regional system when local travel is restricted by a lack of connecting routes, and local trips are forced onto the regional network. Therefore, streets should be designed to keep through trips on arterial streets and provide local trips with alternative routes. The following mapping requirements and design standards are intended to improve local circulation in a manner that protects the integrity of the regional transportation system.

Cities and counties within the Metro region are required to amend their comprehensive plans, implementing ordinances and administrative codes, if necessary, to comply with or exceed the following mapping requirements and design standards:

1. Cities and counties must identify all contiguous areas of vacant and redevelopable parcels of five or more acres planned or zoned for residential or mixed-use development and prepare a conceptual new streets plan map. The map shall be adopted as a part of the Transportation System Plan element of the local Comprehensive Plan. The purpose of this map is to provide guidance to land-owners and developers on desired street connections that will improve local access and preserve the integrity of the regional street system.

The conceptual street plan map should identify street connections to adjacent areas in a manner that promotes a logical, direct and connected street system. Specifically, the map should conceptually demonstrate opportunities to extend and connect to existing streets, provide direct public right-of-way routes, and limit the potential of cul-de-sac and other closed-end street designs.

2. In addition to preparing the above conceptual street plan map, cities and counties shall require new residential or mixed-use development involving construction of new street(s) to provide a site plan that reflects the following:
  - a. Street connections:
    - Responds to and expands on the conceptual street plan map as described in Section 6.4.5(1) for areas where a map has been completed.
    - Provides full street connections with spacing of no more than 530 feet between connections except where prevented by barriers such as topography, railroads, freeways, pre-existing development, or where lease provisions, easements, covenants or other restrictions existing prior to May 1, 1995 which preclude street connections.
    - Where streets must cross water features identified in Title 3 of the Urban Growth Management Functional Plan (UGMFP), provide crossings at an average spacing of 800 to 1,200 feet, unless habitat quality or length of crossing prevents a full street connection.
  - b. Accessways:
    - When full street connections are not possible provides bike and pedestrian accessways on public easements or rights-of-way in lieu of streets. Spacing of accessways between full street connections shall be no more than 330 feet except where prevented by barriers such as topography, railroads, freeways, pre-existing development, or where lease provisions, easements, covenants or other restrictions existing prior to May 1, 1995 which preclude accessway connections.
    - Bike and pedestrian accessways that cross water features identified in Title 3 of the UGMFP should have an average spacing no more than 530 feet, unless habitat quality or length of crossing prevents a connection.
  - c. Centers, main streets and station communities:
    - Where full street connections over water features identified in Title 3 of the UGMFP cannot be constructed in centers, main streets and station communities (including direct connections from adjacent neighborhoods), or spacing of full street crossings exceeds 1,200 feet, provide bicycle and pedestrian crossings at an average

spacing of 530 feet, unless exceptional habitat quality or length of crossing prevents a connection.

d. Other considerations:

- Limits the use of cul-de-sac designs and other closed-end street systems to situations where barriers prevent full street extensions.
- Includes no closed-end street longer than 200 feet or with more than 25 dwelling units.
- Includes street cross-sections demonstrating dimensions of right-of-way improvements, with streets designed for posted or expected speed limits.

For replacement or new construction of local street crossings on streams identified in Title 3 of the Urban Growth Management Functional Plan, Cities and Counties, TriMet, ODOT and the Port of Portland shall amend design codes, standards and plans to allow consideration of the stream crossing design guidelines contained in the Green Streets handbook.

Figure 6.1 demonstrates a site plan map that a developer would provide to meet code regulations for the subdivision of a single parcel. Figure 6.2 shows a street cross-section that could be submitted by a developer for approval during the permitting process.

*Figure 6.1*  
**Site Plan Map**

Figure 6.2  
Street Cross Section – Local Street, mid-block

Source: Metro

3. Street design code language and guidelines must allow for:
  - a. Consideration of narrow street design alternatives. For local streets, no more than 46 feet of total right-of-way, including pavement widths of no more than 28 feet, curb-face to curb-face, sidewalk widths of at least 5 feet and landscaped pedestrian buffer strips that include street trees. Special traffic calming designs that use a narrow right-of-way, such as woonerfs and chicanes, may also be considered as narrow street designs.
  - b. Short and direct public right-of-way routes to connect residential uses with nearby commercial services, schools, parks and other neighborhood facilities.
  - c. Consideration of opportunities to incrementally extend streets from nearby areas.
  - d. Consideration of traffic calming devices to discourage traffic infiltration and excessive speeds on local streets.
4. For redevelopment of existing land-uses that require construction of new streets, cities and counties shall develop local approaches to encourage adequate street connectivity.

#### 6.4.6 Alternative Mode Analysis

Improvement in non-SOV mode share will be used as the key regional measure for assessing transportation system improvements in the central city, regional centers, town centers and station communities. For other 2040 Growth Concept design types, non-SOV mode share will be used as an important factor in assessing transportation system improvements. These modal targets will also be used to demonstrate compliance with per capita travel reductions required by the state TPR. This section requires that cities and counties establish non-SOV regional modal targets for all 2040 design types that will be used to guide transportation system improvements, in accordance with Table 1.3 in Chapter 1 of this plan:

1. Each jurisdiction shall establish an alternative mode share target (defined as non-single occupancy vehicle person-trips as a percentage of all person-trips for all modes of transportation) in local TSPs for trips into, out of and within all 2040 Growth Concept land-use design types within its boundaries. The alternative mode share target shall be no less than the regional modal targets for these 2040 Growth Concept land-use design types to be established in Table 1.3 in Chapter 1 of this plan.
2. Cities and counties, working with Tri-Met and other regional agencies, shall identify actions in local TSPs that will result in progress toward achieving the non-SOV modal targets. These actions should initially be based on RTP modeling assumptions, analysis and conclusions, and include consideration of the maximum parking ratios adopted as part of Title 2, section 3.07.220 of the *Urban Growth Management Functional Plan*; regional street design considerations in Section 6.7.3, Title 6, transportation demand management strategies and transit's role in serving the area. Local benchmarks for evaluating progress toward achieving modal targets may be based on future RTP updates and analysis, if local jurisdictions are unable to generate this information as part of TSP development.
3. Metro shall evaluate local progress toward achieving the non-SOV modal targets during the 20-year plan period of a local TSP using the Appendix 1.8 "TAZ Assumptions for Parking Transit and Connectivity Factors" chart as minimum performance requirements for local actions proposed to meet the non-SOV requirements.

#### **6.4.7 Motor Vehicle Congestion Analysis**

Motor Vehicle Level-Of-Service (LOS) is a measurement of congestion as a share of designed motor vehicle capacity of a road. Policy 13.0 and Table 1.2 of this plan establish motor vehicle level-of-service policy for regional facilities. These standards shall be incorporated into local comprehensive plans and implementing ordinances to replace current methods of determining motor vehicle congestion on regional facilities. Jurisdictions may adopt alternative standards that do not exceed the minimum LOS established in Table 1.2. However, the alternative standard must not:

- result in major motor vehicle capacity improvements that have the effect of shifting unacceptable levels of congestion into neighboring jurisdictions along shared regional facilities;
- result in motor vehicle capacity improvements to the principal arterial system (as defined in Figure 1.12) that are not recommended in, or are inconsistent with, the RTP.
- increase SOV travel to a measurable degree that affects local consistency with the modal targets contained in Table 1.3.

By definition, the RTP addresses congestion of regional significance through the projects identified in Chapter 5 or refinements plans contained in this chapter of the plan. Other, more localized congestion is more appropriately addressed through the local TSP process, and includes any locations on the regional Motor Vehicle System (Figure 1.12) that are not addressed by the RTP. Localized congestion occurs where short links within the transportation system are exceeding LOS standards, though the overall system in the vicinity of the congested link is performing acceptably.

In cases where these localized areas of congestion are located on Principal Arterial routes (as defined in Figure 1.12) or the Regional Freight System (Figure 1.17), they shall be evaluated as part of the local TSP process to determine whether an unmet transportation need exists that has not been addressed in the RTP. Should a local jurisdiction determine that an unmet need exists on such a facility, the jurisdiction shall identify the need in the local TSP, and propose one of the following actions to incorporate the need and recommended solution into the RTP:

- Identify the unmet need and proposed projects at the time of Metro review of local TSPs for consistency, but incorporate the project into the regional TSP during the next scheduled RTP update; or
- Propose an amendment to the RTP for unmet needs and resulting projects where a more immediate update of the regional TSP is appropriate or required.

Intersection analysis and improvements also generally fall outside of the RTP, and capacity improvements recommended in this plan generally apply to links in the regional system, not intersections.

For the purpose of demonstrating local compliance with Table 1.2 as part of a periodic review or plan amendment, the following procedure for conducting the motor vehicle congestion analysis shall be used:

1. *Analysis* – A transportation need is identified in a given location when analysis indicates that congestion has reached the level indicated in the “exceeds deficiency threshold” column of Table 1.2 and that this level of congestion will negatively impact accessibility, as determined through Section 6.4.7(2). The analysis should consider a mid-day hour appropriate for the study area and the appropriate two-hour peak-hour condition, either A.M. or P.M. or both, to address the problem. Other non-peak hours of the day, such as mid-day on Saturday, should also be considered to determine whether congestion is consistent with the acceptable or preferred operating standards identified in Table 1.2. The lead agency or jurisdictions will be responsible for determining the appropriate peak and non-peak analysis periods.

An appropriate solution to the need is determined through requirements contained in this chapter. For regional transportation planning purposes, the recommended solution should be consistent with the acceptable or preferred operating standards identified in Table 1.2. A city or county may choose a higher level-of-service operating standard where findings of consistency with section 6.4.4 have been developed as part of the local planning process. The requirements in Section 6.6.2 shall also be satisfied in order to add any projects to the RTP based on the higher level-of-service standard.

2. *Accessibility* – If a deficiency threshold is exceeded on the regional transportation system as identified in Table 1.2, cities and counties shall evaluate the impact of the congestion on regional accessibility using the best available quantitative or qualitative methods. If a determination is made by Metro that exceeding the deficiency threshold negatively impacts regional accessibility, cities and counties shall follow the transportation systems

analysis and transportation project analysis procedures identified in Sections 6.4.2 and 6.7.3.

3. *Consistency* – The identified function or the identified capacity of a road may be significantly affected by planning for 2040 Growth Concept design types. Cities and counties shall take actions described in Section 6.7 of this chapter, including amendment of their transportation plans and implementing ordinances, if necessary, to preserve the identified function and identified capacity of the road, and to retain consistency between allowed land-uses and planning for transportation facilities.

#### 6.4.8 Future RTP Refinements Identified through Local TSPs

The 2000 RTP represents the most extensive update to the plan since it was first adopted in 1982. It is the first RTP to reflect the 2040 Growth Concept, Regional Framework Plan and state Transportation Planning Rule. In the process of addressing these various planning mandates, the plan's policies and projects are dramatically different than the previous RTP. This update also represents the first time that the plan has considered growth in urban reserves located outside the urban growth boundary but expected to urbanize during the 20-year plan period. As a result, many of the proposed transportation solutions are conceptual in nature, and must be further refined.

In many cases, these proposed transportation solutions were initiated by local jurisdictions and special agencies through the collaborative process that Metro used to develop the updated RTP. However, the scope of the changes to the RTP will require most cities and counties and special agencies to make substantial changes to comprehensive, facility and service plans, as they bring local plans into compliance with the regional plan. In the process of making such changes, local jurisdictions and special agencies will further refine many of the solutions included in this plan.

Such refinements will be reviewed by Metro and, based on a finding of consistency with RTP policies, specifically proposed for inclusion in future updates to the RTP. Section 6.3 requires Metro to develop a process for to ensure consistency between the 2000 RTP and local TSPs by developing a process for tracking local project and functional classification refinements that are consistent with the RTP, but require a future amendment to be incorporated into the RTP. This process will occur concurrently with overall review of local plan amendments, facility plans and service plans, and is subject to the same appeal and dispute resolution process. While such proposed amendments to the RTP may not be effective until a formal amendment has been adopted, the purpose of endorsing such proposed changes is to allow cities and counties to retain the proposed transportation solutions in local plans, with a finding of consistency with the RTP, and to provide a mechanism for timely refinements to local and regional transportation plans.

#### 6.4.9 Local ~~2020~~2025 Forecast – Options for Refinements

The 2000 RTP is a 20-year plan, with a ~~2020~~2025 forecast developed from ~~1994-2000~~ base data. Metro produced an updated ~~2020~~2025 forecast that accounts for ~~urban reserve~~urban growth boundary actions, and estimates the amount of jobs and housing expected ~~in urban reserves in~~ ~~2020~~2025. Local TSPs using the ~~2020~~2025 forecast may experience different modeling outcomes in these areas than were observed during the development of the RTP. Therefore, Metro will accept local plans under the following four options:

1. Local plans in areas unaffected by urban reserve-growth boundary actions may be developed using the RTP forecast for 20202025 (which is based on 1994-2000 data).
2. Local plans already under way at the time of RTP adoption, and which include areas affected by urban reserve-growth boundary actions, may be developed using the RTP forecast for 20202025 (based on 1994-2000 data), with population and employment allocations adjusted by the local jurisdiction to reflect urban reserve actions. However, adjustments to population and employment allocations shall (a) remain within the holding capacity of a traffic zone or area, as defined by Metro's productivity analysis, and (b) not exceed traffic zone or area assumptions of the updated 20202025 forecast.
3. Local plans in areas affected by urban reserve actions may use the updated 20202025 forecast, and any subsequent differences in proposed transportation solutions will be reconciled during Metro's review of the local plan.
4. Local plans may be based on updated, locally developed population and employment data, conditions and 20202025 forecasts. However, population and employment data and forecasts, and the methodology for generating the data and forecasts shall be coordinated at the county level, and accepted by Metro technical staff and TPAC as statistically valid. Subsequent adjustments to the population and employment allocations for traffic zones may be made in the local planning to reflect updated population and employment data and 20202025 forecasts. Metro shall consider the updated locally developed data and forecasts in future RTP forecasts of population and employment. Subsequent differences in local TSP project recommendations that result from the differences in population and employment forecasts will be resolved in the next scheduled RTP update.

Metro will update the 20202025 population and employment allocations periodically to reflect local and regional land-use decisions. For example, changes to the 20202025 population and employment allocations could result if an urban reserve area is reduced in size or taken out altogether if the urban growth boundary is expanded or if local zoning capacity is amended to increase or decrease. The provisions in this section are for the purpose of TSP development and analysis, and do not necessarily apply to other planning activities.

#### **6.4.10 Transit Service Planning**

Efficient and effective transit service is critical to meeting mode-split targets, and the regional transit functional classifications are tied to 2040 Growth Concept land-use components. Local transportation system plans shall include measures to improve transit access, passenger environments and transit service speed and reliability for:

- rail station areas, rapid bus and frequent bus corridors where service is existing or planned
- regional bus corridors where services exists at the time of TSP development

To ensure that these measures are uniformly implemented, cities and counties shall:

1. Adopt a transit system map, consistent with the transit functional classifications shown in Figure 1.16, as part of the local TSP.
2. Amend development code regulations to require new retail, office and institutional buildings on sites at major transit stops to:
  1. Locate buildings within 20 feet of or provide a pedestrian plaza at the major transit stops
  2. Provide reasonably direct pedestrian connections between the transit stop and building entrances on the site
  3. Provide a transit passenger landing pad accessible to disabled persons (if not already existing to transit agency standards)
  4. Provide an easement or dedication for a passenger shelter and underground utility connection from the new development to the transit amenity if requested by the public transit provider
  5. Provide lighting at a transit stop (if not already existing to transit agency standards).
3. Consider designating pedestrian districts in a comprehensive plan or other implementing land use regulations as a means of meeting or exceeding the requirements of OAR 660-012-0045 (4a-c) and this plan section 6.4.10(2) above. Pedestrian district designation shall address the following criteria:
  - (a) A connected street and pedestrian network, preferably through a local street and pedestrian network plan covering the affected area.
  - (b) Designated pedestrian districts should specifically consider, but are not limited to these elements: Transit/pedestrian/bicycle interconnection; parking and access management; sidewalk and accessway location and width; alleys; street tree location and spacing; street crossing and intersection design for pedestrians; street furniture and lighting at a pedestrian scale; and traffic speed. When local transportation system plans are adopted, designated pedestrian districts should be coordinated with the financing program required by the Transportation Planning Rule.
4. Provide for direct and logical pedestrian crossings at transit stops and marked crossings at major transit stops.
5. Consider street designs which anticipate planned transit stop spacing, location, and facilities (such as shelters, benches, signage, passenger waiting areas) and are consistent with the Creating Livable Streets design guidelines.

Public transit providers shall consider the needs and unique circumstances of special needs populations when planning for service. These populations include, but are not limited to, students, the elderly, the economically disadvantaged, the mobility impaired and others with special needs. Consideration shall be given to:

1. adequate transit facilities to provide service
2. hours of operation to provide transit service corresponding to hours of operation of institutions, employers and service providers to these communities
3. adequate levels of transit service to these populations relative to the rest of the community and their special needs

## **6.5 Metropolitan Transportation Improvement Program (MTIP)**

### **6.5.1 The Role of the MTIP in Regional Planning**

An important tool for implementing the RTP is the Metropolitan Transportation Improvement Program (MTIP). The region's four-year funding document, the MTIP schedules and identifies funding sources for projects of regional significance to be built during a four-year period. Federal law requires that all projects using federal funds be included in the MTIP. In developing the MTIP, the region gives top priority to strategic transportation investments that leverage and reinforce the urban form outlined in Chapter 1, of this plan. The MTIP is adopted by Metro and the Oregon Transportation Commission for inclusion into a unified State TIP (STIP), that integrates regional and statewide improvement plans. The MTIP is updated every two years.

ISTEA and TEA-21 created important new fiscal requirements for the TIP. The TIP is fiscally constrained and includes only those projects for which federal resources are reasonably available. Projects are grouped by funding category, with project costs not to exceed expected revenue sources. The MTIP financial plan is not comprehensive; it covers only federal funds for capital improvements, and does not include operations, maintenance and preservation or local funds for capital costs.

It is the responsibility of the cities, counties, ODOT, Tri-Met and the Port of Portland to implement necessary improvements to the regional system, as well as those needed for local travel. These agencies are eligible to receive federal funds allocated through the MTIP process for projects included in the RTP. The TIP is prepared by Metro in consultation with these agencies. Inter-regional coordination throughout the planning and programming process will help to ensure that improvement projects are consistent with regional objectives and with each other.

Projects included in the MTIP must also be included in the RTP financially constrained system. For the purpose of this plan, the assumptions used to develop the financially constrained system are defined in Appendix 4.2. Projects included in the financially constrained system are identified by an asterisk (\*) in Figures 5.8 through 5.14 in Chapter 5. However, while the financially constrained system should provide the basis for most MTIP funding decisions, other projects from the RTP may

also be selected for funding. In the event that such projects are drawn from the plan for funding, the RTP financially constrained system will be amended to include the project or projects. In addition, when the financially constrained system is amended, continued financial constraint must be demonstrated by identifying additional revenues or removal of other projects from the financially constrained system. Except in the case of exempt projects (as defined by the federal and state conformity rules) such actions require an air quality conformity determination.

### **6.5.2 How the MTIP is Developed**

Though the MTIP development process is initiated by Metro, the work begins at the local level, with city and county elected officials receiving input from citizens through local planning efforts, and later sharing their transportation needs at the Joint Policy Advisory Committee on Transportation (JPACT). Additional public input is received at the regional level, as well, when JPACT and the Metro Council review the MTIP for final approval. Upon adoption by the Council, the MTIP is submitted to the Oregon Transportation Commission (OTC) for approval as part of the State Transportation Improvement Plan (STIP).

In 1999, more than \$75 million in regional funds were allocated to a wide variety of projects, ranging from safety improvements and system expansion to projects that leverage the 2040 Growth Concept. Priorities 2000 was the process for developing the fiscal year 2000 to 2003 MTIP. The first step in Priorities 2000 was developing criteria for ranking projects by transportation modes. The second step was a solicitation for project submittals. Local governments, Tri-Met and the Port of Portland submitted 150 transportation projects, with a cost of more than \$300 million, for funding consideration. In the third step, projects were ranked by technical and administrative criteria. Next, the Priorities 2000 projects were reviewed at a series of public workshops and hearings held throughout the region.

The final funding recommendation included 65 projects. The funding package broke new ground in Metro's objective of creating strong linkages between planned land-uses and the allocation of transportation funding. Based on the flow of federal transportation funding, the "Priorities" process for updating the MTIP and allocating revenues will occur every two years.

### **6.5.3 RTP Implementation Benchmarks**

The RTP establishes an general direction for implementation of needed improvements that reflects a wide variety of factors, including expected development trends, existing safety and operational deficiencies, and anticipated revenue. The project timing proposed in the RTP also reflects an effort to create a balanced, multi-modal transportation system. As such, the projects are organized according to those needed during the first five, second five and final ten years of the planning period. To ensure that incremental funding decisions that occur through the MTIP follow this general RTP direction, benchmarks shall be established for monitoring RTP implementation over time, and:

1. The benchmarks shall be tied to Chapter 1 objectives and shall address the relative performance of the system and the degree to which the various RTP projects are being implemented.

2. Findings for consistency with the benchmarks shall be developed as part of the biennial MTIP update, or as necessary in conjunction with other RTP monitoring activities.

In addition, benchmarks should be designed to track the following general information to the degree practicable for ongoing monitoring:

- progress on financing the strategic system
- progress in completing the modal systems described in Chapter 1
- relative change in system performance measures
- progress toward land use objectives related to the RTP
- relative comparisons with similar metropolitan regions on key measures

#### **6.5.4 Improvements in Urban Reserves**

During the MTIP process, improvements that add capacity or urban design elements to rural facilities in urban reserves should:

- be coordinated with expansion of the urban growth boundary
- not encourage development outside of the urban growth boundary
- not disrupt the economic viability of nearby rural reserves
- be consistent with planned urban development or other transportation facilities

## **6.6 Process for Amending the RTP**

### **6.6.1 RTP Policy, System Map and Compliance Criteria Amendments**

When Metro amends policies or system maps in Chapter 1 of this plan or compliance criteria in this chapter, it will evaluate and adopt findings regarding consistency with the Regional Framework Plan. Decisions on amendments made at this level are land-use decisions for need, mode, corridor, general scope and function of a proposed project. Subsequent land-use decisions on final project design and impact mitigation will be needed prior to construction. Such analysis to evaluate impacts could lead to a “no-build” decision where a proposed project is not recommended for implementation, and would require reconsideration of the proposed project or system improvements. As such, amendments at this level shall be reviewed through the post-acknowledgement process. However, a decision on an amendment to the Regional Transportation Plan should not foreclose or appear to foreclose full and fair consideration of all relevant goal issues at such time that specific projects and programs are adopted by a local jurisdiction.

It is Metro's responsibility to adopt findings based on project need, mode, corridor, general scope and function of projects proposed in the Regional Transportation Plan. The affected jurisdiction is responsible for preparing the specific local plan amendments and findings related to specific location, project design and impact mitigation and for scheduling them for hearing before the governing body in time for action by that body by the time required.

### **6.6.2 RTP Project Amendments**

The RTP establishes a comprehensive policy direction for the regional transportation system and recommends a balanced program of transportation investments to implement that policy direction. However, the recommended investments do not solve all transportation problems and are not intended to be the definitive capital improvement program on the local transportation system for the next 20 years.

Rather, the RTP identifies the projects, programs or further refinement studies required to adequately meet regional transportation system needs during the 20-year planning period. Local conditions will be addressed through city and county TSPs, and will require additional analysis and improvements to provide an adequate transportation system. Section 6.7 of this chapter anticipates such refinements, particularly given the degree to which this RTP has been updated from previous plans. Similarly, refinements to the RTP may result from ongoing corridor plans or area studies. The following processes may be used to update the RTP to include such changes:

1. Amendments resulting from major studies: as the findings of such studies are produced, they will be recommended by a resolution of JPACT and the Metro Council. These amendments must be incorporated into the RTP through a quasi-judicial or legislative process, as needed.
2. Amendments resulting from local TSPs: new roadway, transit, bikeway, pedestrian, freight and demand management projects necessary to meet the objectives of the RTP shall be accompanied by an demonstration of consistency with the RTP based on the following criteria:
  - a. The objectives to be met by the proposed projects(s) are consistent with RTP goals, policies and objectives (Chapter 1).
  - b. The proposed action is consistent with the modal function of the facility as defined in Chapter 1.
  - c. The impact of the proposed projects(s) on the balance of the regional system is evaluated through a CMS analysis.
  - d. The proposed action is needed to achieve the motor vehicle level-of-service performance criteria identified in the RTP, or alternative performance criteria adopted in local TSPs under the provisions of Section 6.4.7, as follows:
    - A) principal, major and minor arterial capacity improvements are necessary to maintain compliance with Policy 13.0, Table 1.2, or alternative performance criteria adopted in local TSPs. Improvements that are designed to provide a higher level of service than

the minimum acceptable standard established in Policy 13.0 can be designed and/or provided at the option of the implementing jurisdiction. Such actions must be consistent with the RTP as outlined in this section and demonstrate that either:

- i) a long-range evaluation of travel demand indicates a probable need for right-of-way preservation beyond that necessary for the 20-year project design, or
- ii) the additional service provided by the higher level design is the result of a design characteristic necessary to achieve the minimum motor vehicle performance measure

B) local transportation system improvements must be consistent with the following:

- i) the local system must adequately serve the local travel demands expected from development of the land-use plan to the year ~~2020~~2025 to ensure that the regional system is not overburdened with local traffic
- ii) local analysis shall incorporate required street connectivity plans
- iii) the local system provides continuity between neighboring jurisdictions, consistency between city and county plans for facilities within city boundaries and consistency between local jurisdictions and ODOT plans

- e. The need for the proposed action based on Metro's adopted population and employment projections, or refinements as noted in Section 6.4.8.
- f. The proposed action is consistent with the regional non-SOV modal targets specified in Table 1.3 of Chapter 1.
- g. The proposed action represents the lowest cost system alternative solution acceptable.
- h. The proposed action is not prohibited by unacceptable environmental impacts or other considerations.
- i. A goal, policy or system plan element in the federal RTP would likely change as the result of a "no-build" project decision later in the process.
- j. The project is in the local jurisdiction's TSP, or a final local land-use action occurred.
- k. The project is contained in or consistent with the RTP, adopted comprehensive plan, or implementation plan(s) of any other affected jurisdictions.
- l. Sufficient public involvement activities have occurred regarding the proposed action.

The amount of information required to address these criteria shall be commensurate with the scope of the project. Such additions will be amended into the RTP as part of the project update process described in this section. Operations, maintenance and safety improvements are deemed

consistent with the policy intent of the RTP if (a) they are needed to serve the travel demand associated with Metro's adopted population and employment forecasts, and (b) they are consistent with affected jurisdictional plans.

3. Amendments resulting from updates to the Regional Framework Plan or related functional plans.

### **6.6.3 Congestion Management Requirements**

This section applies to any amendments to the Regional Transportation Plan to add significant single occupancy vehicle (SOV) capacity to multi-modal arterials and/or highways. Consistent with Federal Congestion Management System requirements (23 CFR Part 500) and TPR system planning requirements (OAR 660-12), the following actions shall be considered through the RTP when recommendations are made to revise the RTP to define the need, mode, corridor and function to address an identified transportation needs, and prior to recommendations to add significant SOV capacity:

1. Regional transportation demand strategies
2. Regional transportation system management strategies, including intelligent transportation systems (ITS)
3. High occupancy vehicle (HOV) strategies
4. Regional transit, bicycle and pedestrian system improvements to improve mode split
5. Unintended land-use and transportation effects resulting from a proposed SOV project or projects
6. Effects of latent demand from other modes, routes or time of day from a proposed SOV project or projects
7. If upon a demonstration that the considerations in 1 through 6 do not adequately and cost-effectively address the problem, a significant capacity improvement may be included in the regional transportation plan

### **6.6.4 Plan Maintenance**

The RTP is updated every three to five years, and covers a minimum 20-year plan period. Periodic amendments to the plan will also occur, as needed, to reflect recommendations from corridor or sub-area planning studies. As preparation for each scheduled update, development throughout the region will be monitored to determine whether growth (and the associated travel demand) occurs as forecast. Metro will review its population and employment forecasts annually and update them at least every five years for the following conditions:

- national or regional growth rates differ substantially from those previously assumed
- significant changes in growth rate or pattern develop within jurisdictions

- changes to the urban growth boundary are adopted
- a jurisdiction substantially changes its land-use plan

New information gathered during the course of the year on such issues as energy price and supply, population and employment growth, inflation and new state and federal laws may result in different conditions to be addressed by the plan. These modifications will be incorporated as needed during periodic updates to the plan. Each update will occur in cooperation with affected jurisdictions, state agencies and public transit providers.

## **6.7 Project Development and Refinement Planning**

### **6.7.1 Role of RTP and the Decision to Proceed with Project Development**

Metro is the regional planning agency for the metropolitan area. Metro does not complete local transportation system plans, engineer or build transportation facilities or permit land uses or transportation projects. These activities occur at the local level. After a project has been incorporated in the RTP, it is the responsibility of the local sponsoring jurisdiction to determine the details of the project (design, operations, etc.). The local jurisdiction responsible for the applicable transportation system plan shall reach a decision on whether to build the improvement based upon detailed environmental impact analysis, adoption of actions to mitigate impacts and findings demonstrating consistency with applicable comprehensive plans and applicable statewide planning goals. If this process results in a decision not to build the project, the RTP will be amended to delete the recommended improvement and an alternative must be identified to address the original transportation need.

### **6.7.2 New Solutions Re-submitted to RTP if No-Build Option is Selected**

When a "no-build" alternative is selected at the conclusion of a project development process, a new transportation solution must be developed to meet the original need identified in the RTP, or a finding that the need has changed or been addressed by other system improvements. In these cases, the new solution or findings will be submitted as an amendment to the RTP, and would also be evaluated at the project development level.

### **6.7.3 Project Development Requirements**

Transportation improvements where need, mode, function and general location have already been identified in the RTP and local plans for a specific alignment must be evaluated on a detailed, project development level. This evaluation is generally completed at the local jurisdiction level, or jointly by affected or sponsoring agencies, in coordination with Metro. The purpose of project development planning is to consider project design details and select a project alignment, as necessary, after evaluating engineering and design alternatives, potential environmental impacts and consistency with applicable comprehensive plans and the RTP. The project need, mode, function and general location do not need to be addressed at the project level, since these findings have been previously established by the RTP.

The TPR and Metro's Interim 1996 Congestion Management System (CMS) document require that measures to improve operational efficiency be addressed at the project level, though system-wide considerations are addressed by the RTP. Therefore, demonstration of compliance for projects not included in the RTP shall be documented in a required Congestion Management System report that is part of the project-level planning and development (Appendix D of the Interim CMS document). In addition, the CMS requires that street design guidelines be considered as part of the project-level planning process. This CMS requirement does not apply to locally funded projects on local facilities. Unless otherwise stipulated in the MTIP process, these provisions are simply guidelines for locally funded projects.

Therefore, in addition to system-level congestion management requirements described in Section 6.6.3 in this chapter, cities, counties, TriMet, ODOT, and the Port of Portland shall consider the following project-level operational and design considerations during transportation project analysis as part of completing the CMS report:

1. Transportation system management (e.g., access management, signal inter-ties, lane channelization, etc.) to address or preserve existing street capacity.
2. Street design policies, classifications and design principles contained in Chapter 1 of this plan. See Section 1.3.5, Policy 11.0, Figure 1.4. Implementing guidelines are contained in *Creating Livable Streets: Street Design Guidelines for 2040* (2nd edition, 2002) or other similar resources consistent with regional street design policies.
3. Environmental design guidelines, as contained in *Green Streets: Innovative Solutions for Stormwater and Street Crossings* (2002), and *Trees for Green Streets: An Illustrated Guide* (2002), or other similar resources consistent with federal regulations for stream protection.

Transportation providers in the Metro region, including the cities and counties, TriMet, ODOT, and the Port of Portland are required to amend their comprehensive plans, implementing ordinances and administrative codes, if necessary, to consider the *Creating Livable Streets* design guidelines as part of project development. Transportation providers shall amend design codes, standards and plans to allow consideration of the guidelines contained in *Green Streets: Innovative Solutions for Stormwater and Street Crossings*.

#### **6.7.4 Refinement Planning Scope and Responsibilities**

In some areas defined in this section, the need for refinement planning is warranted before specific projects or actions that meet and identified need can be adopted into the RTP. Refinement plans generally involve a combination of transportation and land use analysis, multiple local jurisdictions and facilities operated by multiple transportation providers. Therefore, unless otherwise specified in this section, Metro or ODOT will initiate and lead necessary refinement planning in coordination with other affected local, regional and state agencies. Refinement planning efforts will be multi-modal evaluations of possible transportation solutions in response to needs identified in the RTP, including land use alternatives and to address consistency with applicable statewide planning goals. Refinement plans fall into two broad groups of scope and complexity:

- Type I - Major corridor refinements are necessary where a transportation need exists, but mode, function and general location of a transportation improvement are not determined, and a range of actions must be considered prior to identifying specific projects.
- Type II - Minor corridor refinements are necessary where both the need and mode for a transportation improvement are identified in the RTP, but a specific project has not been identified.

Appendix 3.1 describes the ~~2000 RTP~~ prioritization for major corridor refinements and minor corridor refinements defined by the Corridor Studies process in 2000. Refinement plan and corridor study prioritization and specific scope for each corridor is subject to annual updates as part of the Unified Work Plan (UWP).

#### **6.7.5 Type I – Major Corridor Refinements**

Type I, major corridor refinements will be conducted by state or regional agencies working in partnership with local governments in the following areas. In each case, a transportation need has been established by the RTP, and in some cases, mode, function or general location may be determined or the decision on these elements narrowed at the TSP level to focus the refinement planning work. A transportation need is identified when regional standards for safety, mobility, or congestion are exceeded. In many of these corridors, RTP analysis indicates several standards are exceeded.

The purpose of Type I major corridor refinements is to develop an appropriate transportation strategy or solution through the corridor planning process that determined mode, function and general location of a project or set of projects. For each corridor, a number of transportation alternatives will be examined over a broad geographic area or through a local TSP to determine a recommended set of projects, actions or strategies that meet the identified need. This section of the RTP also identifies a number of corridor planning issues that shall be addressed as part of the refinement planning process.

For refinement planning in corridors located outside the urban growth boundary, this work shall also address relevant statewide planning goal exception requirements pursuant to Section 660.012.0070 of the state transportation planning rule. These findings shall expand on exceptions findings made as part of the 2000 RTP adoption ordinance, but address more localized issues relevant to the refinement level of planning.

The specific project recommendations from Type I major corridor refinements are then incorporated into the RTP, as appropriate. This section contains the following specific considerations that must be incorporated into corridor studies as they occur:

##### *Interstate-5 North (I-84 to Clark County)*

This heavily traveled route is the main connection between Portland and Vancouver. In addition to a number of planned and proposed highway capacity improvements, light rail is proposed along Interstate Avenue to the Expo Center, and may eventually extend to Vancouver. As improvements are implemented in this corridor, the following design considerations should be addressed:

- consider HOV lanes and peak period pricing
- transit alternatives from Vancouver to the Portland Central City (including light rail transit and express bus)
- maintain an acceptable level of access to the central city from Portland neighborhoods and Clark County
- maintain off-peak freight mobility, especially to numerous marine, rail and truck terminals in the area
- consider adding reversible express lanes to I-5
- consider new arterial connections for freight access between Highway 30, port terminals in Portland and port facilities in Vancouver, Wa.
- maintain an acceptable level of access to freight intermodal facilities and to the Northeast Portland Highway
- construct interchange improvements at Columbia Boulevard to provide freight access to Northeast Portland Highway
- address freight rail network needs
- consider additional Interstate Bridge capacity sufficient to handle project needs
- develop actions to reduce through-traffic on MLK and Interstate to allow main street redevelopment

*Interstate-5 South (Highway 217 to ~~Wilsonville~~Willamette River/Boones Bridge)*

This facility serves as the major southern access to and from the central city. The route also serves as an important freight corridor, where Willamette Valley traffic enters the region at the Wilsonville “gateway,” and provides access to Washington County via Highway 217. Projections for this facility indicate that growth in traffic between the Metro region and the Willamette Valley will account for as much as 80 percent of the traffic volume along the southern portion of I-5, in the Tualatin and Wilsonville area. .A joint ODOT and Wilsonville study<sup>1</sup> concludes that in 2030 widening of I-5 to eight lanes would be required to meet interstate freeway capacity standards set by Metro and ODOT and that freeway access capacity would not be adequate with an improved I-5/Wilsonville Road interchange. For ~~this~~these reasons, the appropriate improvements in this corridor are unclear at this time. However, I-5 serves as a critical gateway for regional travel and commerce, and an acceptable transportation strategy in this corridor has statewide significance. A major corridor study is proposed to address the following issues:

<sup>1</sup> I-5/Wilsonville Freeway Access Study, DKS Associates, November 2002

- [the effects of widening I-205 on the I-5 South corridor](#)
- [the effects of the I-5 to 99W Connector on the Stafford Road interchange and the resultant need for increased freeway access](#)
- [the effects of peak period congestion in this area on regional freight mobility and travel patterns](#)
- the ability of inter-city transit service, to/from neighboring cities in the Willamette Valley, including commuter rail, to slow traffic growth in the I-5 corridor
- the ability to maintain off-peak freight mobility with capacity improvements
- the potential for better coordination between the Metro region and valley jurisdictions on land-use policies
- the effects of a planned long-term strategy for managing increased travel along I-5 in the Willamette Valley
- [the effects of UGB expansion and Industrial Lands Evaluation studies on regional freight mobility](#)
- [the effects to freight mobility and local circulation due to diminished freeway access capacity in the I-5/Wilsonville corridor](#)

In addition, the following design elements should be considered as part of the corridor study:

- peak period pricing and HOV lanes for expanded capacity
- provide rapid bus service on parallel Barbur route, connecting Wilsonville to the central city
- provide additional overcrossings in West Portland town center to improve local circulation and interchange access
- [provide additional freeway access improvements in the I-5/Wilsonville corridor to improve freight mobility and local circulation, \(e.g. a new Boeckman Road interchange\)](#)
- add capacity to parallel arterial routes, including 72nd Avenue, Boones Ferry, Lower Boones Ferry and Carmen Drive
- add overcrossings in vicinity of Tigard Triangle to improve local circulation
- extend commuter rail service from Salem to the central city, Tualatin transit center and Milwaukie, primarily along existing heavy rail tracks
- [additional I-5 mainline capacity \(2030 demand on I-5 would exceed capacity\)](#)

- [provision of auxiliary lanes between all I-5 freeway on- and off-ramps in Wilsonville](#)

#### *Interstate 205*

Improvements are needed in this corridor to address existing deficiencies and expected growth in travel demand in Clark, Multnomah and Clackamas counties. Transportation solutions in this corridor should address the following needs and opportunities:

- provide for some peak period mobility for longer trips
- preserve freight mobility from I-5 to Clark County, with an emphasis on connections to Highway 213, Highway 224 and Sunrise Corridor
- maintain an acceptable level of access to the Oregon City, Clackamas and Gateway regional centers and Sunrise industrial area
- maintain acceptable levels of access to PDX, including air cargo access

Potential transportation solutions in this corridor should evaluate the potential of the following design concepts:

- auxiliary lanes added from Airport Way to I-84 East
- consider express, peak period pricing or HOV lanes as a strategy for expanding capacity
- relative value of specific ramp, overcrossing and parallel route improvements
- eastbound HOV lane from I-5 to the Oregon City Bridge
- truck climbing lane south of Oregon City
- potential for rapid bus service or light rail from Oregon City to Gateway
- potential for extension of rapid bus service or light rail north from Gateway into Clark County
- potential for refinements to 2040 land-use assumptions in this area to expand potential employment in the subarea and improve jobs/housing imbalance
- potential for re-evaluating the suitability of the Beaver Creek area for urban growth boundary expansion, based on ability to serve the area with adequate regional transportation infrastructure

#### *McLoughlin-Highway 224*

Long-term improvements are needed in this corridor to preserve access to and from the Central City from the Clackamas County area, to provide access to the developing Clackamas regional center and to support downtown development in the Milwaukie town center. The recently completed South/North light rail study demonstrated a long-term need for high-capacity transit service in this corridor. The long-term transit need is critical, as demonstrated in the RTP analysis, where both highway and high-capacity transit service were needed over the 20-year plan period to keep pace with expected growth in this part of the region. The 2040 Growth Concept also calls for the regional centers and central city to be served with light rail. Transportation solutions in this corridor should address the following design considerations

- institute aggressive access management throughout corridor, including intersection grade separation along Highway 224 between Harrison Street and I-205
- design access points to McLoughlin and Highway 224 to discourage traffic spillover onto Lake Road, 34th Avenue, Johnson Creek boulevard, 17th Avenue and Tacoma Street
- monitor other local collector routes and mitigate spillover effect from congestion on McLoughlin and Highway 224
- consider an added reversible HOV or peak-period priced lane between Ross Island Bridge and Harold Street intersection
- expand highway capacity to a total of three general purpose lanes in each direction from Harold Street to I-205, with consideration of express, HOV lanes or peak period pricing for new capacity
- provide a more direct transition from McLoughlin to Highway 224 at Milwaukie to orient long trips and through traffic onto Highway 224 and northbound McLoughlin
- provide improved transit access to Milwaukie and Clackamas regional centers, including rapid bus in the short term, and light rail service from Clackamas regional center to Central City in the long term

#### *~~Powell Boulevard/Foster Road~~*

~~The concentration potential urban growth boundary expansions in Clackamas County and southeast Multnomah County will place heavy demands on connecting routes that link these areas with employment centers in Portland and Multnomah County. Of these routes, the Foster/Powell corridor is most heavily affected, yet is also physically constrained by slopes and the Johnson Creek floodplain, making capacity improvements difficult. More urban parts of Foster and Powell Boulevard are equally constrained by existing development, and the capacity of the Ross Island Bridge.~~

~~As a result, a corridor study is needed to explore the potential for high capacity transit strategies that provide access from the developing Pleasant Valley and Damascus areas to employment areas~~

along the Foster/Powell corridor, Gresham regional center, Columbia South Shore industrial area and central city. Such a study should consider the following transportation solutions:

- aggressive transit improvements, including rapid bus service from Central City to Damascus town center via Powell and Foster roads, and primary bus on 172nd Avenue and to the Gresham regional center, Eastside MAX and Columbia South Shore
- capacity improvements that would expand Foster Road from two to three lanes from 122nd to 172nd avenues, and from two to five lanes from 172nd Avenue to Highway 212, phased in coordination with planned capacity improvements to Powell Boulevard between I-205 and Eastman Parkway
- extensive street network connection improvements in the Mount Scott and Pleasant Valley areas to reduce local travel demand on Foster Road and Powell Boulevard, and to improve access between these areas and adjacent East Multnomah and northeast Clackamas Counties
- ITS or other system management approaches to better accommodate expected traffic growth on the larger southeast Portland network, East Multnomah and northeast Clackamas County network

## **Powell Boulevard/Foster Road Phase 2**

The Powell Boulevard/Foster Road Corridor represents both a key transportation challenge and an opportunity to meet 2040 regional land use goals. The Powell/Foster Corridor is a top priority among corridors requiring refinement plans. Despite policy changes to level-of-service standards that permit greater levels of congestion, significant multi-modal improvements will be needed in order to continue to serve transportation needs of the communities and industrial areas in southeast Portland and Gresham. The corridor is also critical to providing access to the planned growth areas in Pleasant Valley, along with Damascus and Springwater that have recently been added to the Urban Growth Boundary. In addition, the corridor is constrained by significant topographical and environmental features.

As a result of the findings from Phase 1 of the Powell Boulevard/Foster Road Corridor Plan, which was completed in 2003, specific multi-modal projects have been identified that address transportation needs on Powell Boulevard between inner SE Portland and Gresham, and on Foster Road west of Barbara Welch Road. System level decisions for transit service were also made for the corridor.

Several outstanding transportation problems in the Pleasant Valley, Damascus and south Gresham areas, require additional planning work before specific multi-modal projects can be developed and implemented. The Phase 2 plan should closely coordinated with concept plans for Damascus and the Springwater area, in order to incorporate the updated land use and transportation assumptions. It should examine the following transportation solutions and strategies:

- Determine the appropriate cross section on Foster Road between Barbara Welch Road and Jenne Road and the project timing, to meet roadway, transit, pedestrian and bike needs.
- Explore possibilities for potential new street connection improvements in the Mount Scott area that reduce local travel demand on Foster Road and improve access to the Pleasant Valley area.
- Develop conceptual designs and determine right-of-way for an improvement and extension of SE 174<sup>th</sup> Avenue between Powell Boulevard and Giese Road, or another new north-south roadway in the area, to accommodate travel demand and improve access to Pleasant Valley. The alignment should consider engineering feasibility, land use and environmental affects, safety, and overall costs.
- Further define the three-lane Highland Drive and Pleasant View Drive option that was recommended as part of Phase 1. This option needs to address design, operational, and safety-related issues.
- Work with local jurisdictions to provide for access management on arterials serving Pleasant Valley and Damascus.
- Address other regional north-south transportation needs identified by the Damascus Concept Plan and Springwater concept planning effort. Further evaluate alignment issues, engineering cost estimates, and right-of-way impacts of future roadway projects north of Damascus that are identified as part of the concept planning effort.

### *Highway 217*

Improvements in this corridor are needed to accommodate expected travel demand, and maintain acceptable levels of access to the Beaverton and Washington Square regional centers. The following design and functional considerations should be included in the development of transportation solutions for this corridor:

- expand highway to include a new lane in each direction from I-5 to US 26
- address the competing needs of serving localized trips to the Washington Square and Beaverton regional centers and longer trips on Highway 217
- consider express, HOV lanes and peak period pricing when adding new capacity
- design capacity improvements to maintain some mobility for regional trips during peak travel periods
- design capacity improvements to preserve freight mobility during off-peak hours
- retain auxiliary lanes where they currently exist
- improve parallel routes to accommodate a greater share of local trips in this corridor

- consider improve light rail service or rapid bus service with substantially improved headways
- coordinate with planned commuter rail service from Wilsonville to Beaverton regional center

### *Tualatin Valley Highway*

A number of improvements are needed in this corridor to address existing deficiencies and serve increased travel demand. One primary function of this route is to provide access to and between the Beaverton and Hillsboro regional centers. Tualatin Valley Highway also serves as an access route to Highway 217 from points west along the Tualatin Valley Highway corridor. As such, the corridor is defined as extending from Highway 217 on the east to First Avenue in Hillsboro to the west, and from Farmington Road on the south to Baseline Road to the north. The following design considerations should be addressed as part of a corridor study:

- develop an access management plan as part of a congestion management strategy
- implement TSM and other interim intersection improvements at various locations between Cedar Hills Boulevard and Brookwood Avenue
- the relative trade-offs of a variety of capacity and transit improvements, including:
  - a. improvements on parallel routes such as Farmington, Alexander, Baseline and Walker roads as an alternative to expanding Tualatin Valley Highway
  - b. seven-lane arterial improvements from Cedar Hills Boulevard or Murray Boulevard to Brookwood Avenue or Baseline Road in Hillsboro
  - c. a limited access, divided facility from Cedar Hills Boulevard or Murray Boulevard to Brookwood Avenue, with three lanes in each direction and some grade separation at major intersections
  - d. transit service that complements both the function of Tualatin Valley Highway and the existing light rail service in the corridor
- evaluate impacts of the principal arterial designation, and subsequent operation effects on travel within the Beaverton regional center
- evaluate motor vehicle and street design designations as part of the study to determine the most appropriate classifications for this route

### *North Willamette Crossing*

The RTP analysis shows a strong demand for travel between Northeast Portland Highway and the adjacent Rivergate industrial area and Highway 30 on the opposite side of the Willamette River. The St. Johns Bridge currently serves this demand. However, the St. Johns crossing has a number of limitations that must be considered in the long term in order to maintain adequate freight and

general access to the Rivergate industrial area and intermodal facilities. Currently, the St. Johns truck strategy is being developed (and should be completed in 2000) to balance freight mobility needs with the long-term health of the St. Johns town center. The truck strategy is an interim solution to demand in this corridor, and does not attempt to address long-term access to Rivergate and Northeast Portland Highway from Highway 30. Specifically, the following issues should be considered in a corridor plan:

- build on the St. Johns Truck Strategy recommendations to adequate freight and general access to Rivergate, while considering potentially negative impacts on the development of the St. Johns town center
- incorporate the planned development of a streamlined Northeast Portland Highway connection from I-205 to Rivergate to the crossing study
- include a long-term management plan for the St. John's Bridge, in the event that a new crossing is identified in the corridor plan recommendations

#### *Barbur Boulevard/ I-5*

This corridor provides access to the Central City and to neighborhoods and commercial areas in the inner southwest quadrant of the region. Barbur Boulevard is identified as a multi-modal facility with potential light rail or Rapid Bus as well as serving a regional role for motor vehicle, bicycle and pedestrian systems. I-5 in this corridor is a Main Roadway route for freight and a Principle Arterial for motor vehicles extending southward beyond the region.

Segments of both Barbur Boulevard and I-5 in this corridor experience significant congestion and poor service levels even with Priority System improvements, especially from the Terwilliger interchange northward. However, Rapid Bus service along Barbur and other expanded bus services are expected to experience promising ridership levels. Significant localized congestion occurs along the intersecting street segments of Bertha, Terwilliger and Capitol Highway/Taylor's Ferry roads. Broad street cross-sections, angled intersections and limited signalized crossing opportunities along Barbur Boulevard creates traffic safety hazards and inhibits walking to local destinations and access to transit services.

Transportation solutions in the corridor should include the following considerations:

- Regional and local transit services and facilities needed to serve the Barbur corridor within the RTP planning horizon.
- Possible new locations or relocations for I-5 on-ramps and off-ramps and street connections across the freeway right-of-way.
- Opportunities for new or improved local street connections to Barbur Boulevard.
- Facilities to improve bicycle and pedestrian safety along Barbur and access to transit services and local destinations.

- Traffic management and intelligent transportation system improvements along the corridor.
- Potential mainline freeway improvements including possible southbound truck climbing lanes.

#### 6.7.6 Type II - Minor Corridor Refinements

Type II minor corridor refinements will be conducted by state or regional agencies working in partnership with local governments in the following areas. In each case, a transportation need has been established by the RTP, and in some cases, mode, function or general location may be determined or the decision on these elements narrowed at the TSP level to focus the refinement planning work. A transportation need is identified when regional standards for safety, mobility, or congestion are exceeded. In many of these corridors, RTP analysis indicates several standards are exceeded.

The purpose of the minor corridor refinement process is to identify specific projects consistent with the identified need, mode and general corridor. These proposed transportation projects must be developed to a more detailed level before construction can occur. This process is described in Section 6.7.3 of this chapter. For minor refinement planning in corridors located outside the UGB, this work shall also address relevant statewide planning goal exception requirements pursuant to Section 660.012.0070 of the state transportation planning rule. These findings shall expand on exceptions findings made as part of the 2000 RTP adoption ordinance, but address more localized issues relevant to the refinement level of planning. The specific project recommendations from major corridor studies are then incorporated into the RTP, as appropriate.

Because minor corridor refinements are more specific in location and mode, local TSPs shall consider measures to protect future right-of-way options within the affected corridors. Likewise, the refinement planning process shall make recommendations for corridor preservation or right-of-way acquisition strategies to ensure that final project recommendations are not precluded by land use decisions within the corridor.

The project development stage determines design details, and a project location or alignment, if necessary, after evaluating engineering and design details, and environmental impacts. While all projects in this plan must follow this process before construction can occur, the following projects must also consider the design elements described in this section:

##### *Banfield (Interstate 84) Corridor*

Despite the relatively heavy investments made in transit and highway capacity in this corridor in the 1980s, further improvements are needed to ensure an acceptable level of access to the central city from Eastside Portland neighborhoods and East Multnomah County. However, physical, environmental and social impacts make highway capacity improvements in this corridor unfeasible. Instead, local and special district plans should consider the following transportation solutions for this corridor:

- mitigate infiltration on adjacent corridors due to congestion along I-84 through a coordinated system of traffic management techniques (ITS)
- improve light rail headways substantially to keep pace with travel demand in the corridor
- improve bus service along adjacent corridors to keep pace with travel demand, including express and non-peak service
- consider additional feeder bus service and park-and-ride capacity along the eastern portion of the light rail corridor to address demand originating from East Multnomah and North Clackamas Counties
- develop TSM strategies for the Gateway regional center to mitigate expected spillover effects on the development of the regional center

### *Northeast Portland Highway*

As radial urban highways such as the Banfield and Interstate-5 are increasingly burdened by peak period congestion, freight mobility will rely more heavily on circumferential routes, including I-205 and Northeast Portland Highway, for access to industrial areas and intermodal facilities. Northeast Portland Highway plays a particularly important role, as it links the Rivergate marine terminals and PDX air terminals to industry across the region (this route includes Killingsworth and Lombard streets from I-205 to MLK Jr. Boulevard, and Columbia Boulevard from MLK Jr. Boulevard to North Burgard). Though Northeast Portland Highway appears to have adequate capacity to serve expected [2020/2025](#) demand, a number of refinements in the corridor are needed. Local and special district plans should consider the following transportation solutions as improvements are made in this corridor:

- improve Northeast Portland Highway as a strategy for addressing Banfield corridor and east Marine Drive congestion
- develop a long-term strategy to serve freight movement between Highway 30 and Rivergate
- implement aggressive access management along Northeast Portland Highway
- implement and refine Columbia Corridor improvements to address full corridor needs of Northeast Portland Highway, from Rivergate to I-205
- consider future grade separation at major intersections
- streamline the Northeast Portland Highway connection from the Lombard/Killingsworth section to Columbia Boulevard with an improved transition point at MLK Jr. Boulevard

- improve the Columbia Boulevard interchange at I-5 to provide full access to Northeast Portland Highway
- construct capacity and intersection improvements between 82nd Avenue and I-205
- Implement the St. Johns Truck Strategy recommendations in order to direct truck traffic onto the designated freight system, as shown in Figure 1.17, and protect the Lombard main street and St. Johns town center from truck traffic impacts.

#### *Interstate-84 to US 26 Connector*

The long-term need to develop a highway link between I-84 and Highway 26 exists, but a series of interim improvements to Hogan Road are adequate to meet projected demand through ~~2020~~2025. The RTP calls for a series of interim improvements that will better connect Hogan Road to both I-84 on the north, and Highway 26 to the south.

These improvements are needed to ensure continued development of the Gresham regional center and expected freight mobility demands of through traffic. They also benefit transit-oriented development along the MAX light rail corridor, as they would move freight traffic from its current route along Burnside, where it conflicts with development of the Rockwood town center and adjacent station communities. In addition to planned improvements to the Hogan Road corridor, local plans or a corridor study should address:

- more aggressive access management between Stark Street and Powell Boulevard on 181st, 207th and 257th avenues
- redesigned intersections improvements on Hogan at Stark, Burnside, Division and Powell to streamline through-flow
- the need for a long-term primary freight route in the corridor
- the potential for a new alignment south of Powell Boulevard to US 26.

#### *Sunrise Corridor*

The full Sunrise Corridor improvement from I-205 to Highway 26 is needed during the 20-year plan period, but should be implemented with a design and phasing that reinforces development of the Damascus town center, and protect rural reserves from urban traffic impacts. This corridor includes rural areas outside the Metro area urban growth boundary. Impacts on rural resources in these areas shall be addressed through statewide planning goal exception findings that expand on findings already adopted in the 2000 RTP, pursuant to Section 660.012.0070 of the state transportation planning rule. Though a draft environmental impact statement has been prepared for this corridor, the final environmental impact statement should be refined to consider the following elements:

- Construct the segment from I-205/Highway 224 interchange to existing Highway 212 at Rock Creek as funds become available
- preserve right-of-way (ROW) from Rock Creek to Highway 26 as funds become available
- consider phasing Sunrise construction as follows: (a) complete I-205 to Rock Creek segment first, followed by (b) ROW acquisition of remaining segments, then (c) construction of 222nd Avenue to Highway 26 segment and (d) lastly, construction of middle segment from Rock Creek to 222nd Avenue as Damascus town center develops
- consider express, peak period pricing and HOV lanes as phases of the Sunrise Corridor are constructed
- reflect planned network of streets in Damascus/Pleasant Valley area in refined interchange locations along the Sunrise Route, including a connection at 172nd Avenue, the proposed major north/south route in the area
- implement bus service in parallel corridor from Damascus to Clackamas regional center via Sunnyside Road
- avoid premature construction that could unintentionally increase urban pressures in rural reserves east of Damascus
- examine the potential for the highway to serve as a "hard edge" in the ultimate urban form of the Damascus area
- develop a concurrent plan to transition the function of the existing Highway 212 facility into a major arterial function, with appropriate access management and intersection treatments identified
- pursue a Green Corridor intergovernmental agreement (IGA) for the Sunrise Corridor from the Damascus town center to US 26, with the specific western terminus for the IGA flexible to future expansion of the urban growth boundary.

#### *I-5 to 99W Connector*

An improved regional connection between Highway 99W and I-5 is needed in the Tualatin area to accommodate regional traffic, and to move it away from the Tualatin, Sherwood and Tigard town centers. The RTP has narrowed the corridor to include two alternatives that depart from I-5 in the same general corridor, but split to form northern and southern alignments relative to the City of Sherwood. Impacts on rural resources in both alignments of this corridor shall be addressed through statewide planning goal exception findings that expand on findings already adopted in the 2000 RTP, pursuant to Section 660.012.0070 of the state transportation planning rule. This connection will also have significant effects on urban form in this rapidly growing area, and the following considerations should be addressed in a corridor plan:

- balance improvement plans with impacts on Tualatin and Sherwood town centers and adjacent rural reserves
- in addition to the northern alignment considered in the Western Bypass Study, examine the benefits of a southern alignment, located along the southern edge of Tualatin and Sherwood, including the accompanying improvements to 99W that would be required with either alignment
- identify parallel capacity improvements to Tualatin-Sherwood Road and 99W in Tigard from I-5 to Highway 217 that could be used to phase in, and eventually complement future highway improvements
- link urban growth boundary expansion in this area to the corridor plan and examine potential the proposed highway to serve as a "hard edge" in the ultimate urban form of the Sherwood area
- develop an access management and connectivity plan for 99W in the Tigard area that balances accessibility needs with physical and economic constraints that limit the ability to expand capacity in this area
- consider express, peak-period pricing and HOV lanes
- pursue a Green Corridor intergovernmental agreement (IGA) for the I-5/99W connector and Highway 99W south of the connector.

#### *Sunset Highway*

Improvements are needed in this corridor to preserve access to and from the central city and the Sunset Corridor employment area, and provide access to Hillsboro regional center. The following elements should be considered as improvements are implemented in this corridor:

- maintain off-peak freight mobility
- phase in capacity improvements from the Sylvan interchange to 185th Avenue, expanding to a total of three general purpose lanes in each direction
- improve light rail service, with substantially increased headways
- construct major interchange improvements at Sylvan, Cedar Hills Boulevard and Cornelius Pass Road
- identify and construction additional overcrossings in the vicinity of interchanges to improve connectivity and travel options for local traffic, thus improving interchange function
- consider express, peak period pricing or HOV lanes when adding highway capacity, especially west of Highway 217

### *Highway 213*

Improvements to this highway link between I-205 and the Willamette Valley should be built in phases, and consider the following:

- continued development of the Oregon City regional center
- interim improvements identified in the 1999 Highway 213 Urban Corridor Study (and included in this plan)
- freight mobility demands
- access needs of Beavercreek urban area, including a re-evaluation of the suitability of Oregon City urban growth boundary expansion in light of transportation constraints
- transit service to areas south of Oregon City.

Though heavy travel demand existing along Macadam/Highway 43, between Lake Oswego and the central city, physical and environmental constraints preclude major roadway expansion. Instead, a long-term strategy for high-capacity transit that links the central city to southwest neighborhoods and Lake Oswego town center is needed. As this service is implemented, the following options should be considered in local and special district plans:

- interim repairs to maintain Willamette Shores Trolley excursion service
- implement frequent bus service from Lake Oswego town center to Portland central city in the Macadam corridor
- phasing of future streetcar commuter service or commuter rail in this corridor to provide a high-capacity travel option during congested commute periods, using either the Willamette Shore Line right-of-way, the Macadam Corridor Design Guidelines (1985) rail alignment or other right-of-way as appropriate.
- implement bicycle safety improvements where appropriate south of the Sellwood Bridge

#### 6.7.7 Areas of Special Concern

Section 660.012.0060 of the state Transportation Planning Rule (TPR) allows local plans to "modify planned function, capacity and performance standards, as needed, to accept greater motor vehicle congestion to promote mixed-use, pedestrian friendly development where multi-modal choices are provided." Facilities in the areas or corridors described in this section are expected to exceed the motor vehicle level of service policy set forth in this plan, and fall under this designation, as they are planned mixed use areas that will have a wide range of transportation alternatives.

However, in each case, the range of transportation solutions needed to address an RTP motor vehicle deficiency represents an unacceptable social, financial or environmental impact, and would be inconsistent with other local, regional and statewide planning goals. Further, each of these areas or corridors represents a relatively localized impact on the overall regional system, and other, alternative travel routes that would continue to conveniently serve regional travel needs. Strategies for managing traffic impacts and providing adequate transportation performance in these areas could include bicycle, pedestrian and transit improvements, demand management programs or changes to land-use plans.

In these areas where motor vehicle performance measures will be exceeded, local TSPs shall adopt one of the following approaches for establishing other transportation performance standards for Areas of Special Concern:

1. Adopt the following performance measures, and provide an analysis that demonstrates progress toward meeting these measures in the local TSP:
  - a. Non-SOV modal targets consistent with Table 1.3 in Chapter 1 of this plan

- b. parking ratios consistent with Title 2 of the Urban Growth Management Functional Plan (UGMFP)
  - c. a street connectivity plan for the Area of Special Concern that meets the connectivity requirements set forth in Section 6.4.5 of this chapter
  - d. a plan for mixed-use development
2. Establish an Area of Special Concern action plan that:
- a. anticipates the growth and subsequent impacts of motor vehicle traffic on multi-modal travel in these areas
  - b. establishes an action plan for mitigating the growth and subsequent impacts of motor vehicle traffic
  - c. establishes performance standards for monitoring and implementing the action plan

The action plan shall consider land-use strategies, as well as transportation solutions for managing the effects of continued traffic growth.

For either strategy, the adopted approach and performance measures shall be incorporated into Appendix 3.6 of the RTP during the next scheduled update. For an Area of Special Concern, adopted performance measures consistent with this section are required at the time of a plan amendment that significantly affects a regional facility, consistent with OAR 660.012.0060.

The following Areas of Special Concern where refinement planning to establish performance measures shall occur as part of the local TSP process, in accordance with this section:

*Highway 99W*

The Highway 99W corridor between Highway 217 and Durham Road is designated as a mixed-used corridor in the 2040 Growth Concept, and connects the Tigard and King City town centers. This route also experiences heavy travel demand. The City of Tigard has already examined a wide range of improvements that would address the strong travel demand in this corridor. The RTP establishes the proposed I-5 to 99W connector as the principal route connecting the Metro region to the 99W corridor outside the region. This emphasis is intended to change in the long term the function of 99W, north of Sherwood, to a major arterial classification, with less need to accommodate longer, through trips.

However, for much of Washington County, Highway 99W will still be a major connection, linking Sherwood and Tigard to the rest of the County and linking the rest of the County to the Highway 99W corridor outside of the region. A number of alternatives for relieving congestion have been tested as part of the RTP update, and by the City of Tigard in earlier planning efforts. These efforts led to the common conclusion the latent travel demand in the Highway 99W corridor is too great to be reasonably offset solely by capacity projects. While the RTP proposed new capacity on 99W between I-5 and Greenburg Road, no specific capacity projects are proposed south of Greenburg Road, due to latent demand and the impacts that a major road expansion would have on existing development. As a result, this section of Highway 99W is not expected to meet the region's motor vehicle level of service policies during mid-day and peak demand periods in the future, and an alternative approach to managing and accommodating traffic in the corridor is needed.

Since statewide, regional and local travel will still need to be accommodated and managed for sometime ODOT, Metro, Washington County and Tigard should cooperatively address the means for transitioning to the future role of the facility to emphasize serving circulation within the local community. This will include factoring in the social, environmental and economic impacts that congestion along this facility will bring. Additionally the analysis should specifically document the schedule for providing the alternatives for accommodating the regional and statewide travel. Similarly the local TSPs should include the agreed upon action plans and benchmarks to ensure the local traffic and access to Highway 99W is managed in a way that is consistent with broader community goals. Additional alternative mode choices should be ensured for Tigard and King City town centers. Tri-Met should be a major participant in the alternative mode analysis. The results of this cooperative approach should be reflected in the local TSPs and the RTP.

In addition, other possible solutions, such as ODOT's new program for local street improvements along highway corridors, may provide alternatives for managing traffic growth on 99W. Finally, the local TSPs should also consider changes to planned land use that would minimize the effects of growing congestion.

*Gateway Regional Center*

Gateway is at a major transportation crossroads, and suffers and benefits from the level of access that results. The Preferred System analysis shows that from the perspective of employers looking at labor markets, the Gateway area is the most accessible place in the Metro region. At the same time, spillover traffic from the Banfield Freeway corridor exceeds the LOS policy established in Table 1.2 on a number of east/west corridors in the Gateway area, including Halsey, Glisan, Burnside, Stark and Division streets.

The local TSP should examine the ability of local streets in these areas to absorb travel demand to a degree that cannot be measured in the regional model. A traffic management plan for these streets should be integrated with the overall TSP strategy, but should establish specific action plans and benchmarks for facilities determined to exceed the LOS policy in the local analysis. Alternative mode choices should be identified to further reduce travel demand. The local

TSP should also consider strategies for providing better access to LRT, including park and ride facilities at station areas.

### *Tualatin Town Center*

Tualatin town center is adjacent to an important industrial area and employment center. New street connections and capacity improvements to streets parallel to 99W and I-5 help improve local circulation and maintain adequate access to the industrial and employment area in Tualatin. However, the analysis of travel demand on regional streets shows that several streets continue to exceed the LOS policy established in Table 1.2, including Hall Boulevard and Boones Ferry Road.

The Tualatin transportation system plan should further evaluate ITS or other system management strategies to further address travel demands and peak-hour expected congestion along Hall Boulevard and Boones Ferry Road entering the town center. In addition, the local TSP should examine the ability of local streets in these areas to absorb travel demand to a degree that cannot be measured in the regional model. A traffic management plan for these streets should be integrated with the overall TSP strategy, but should establish specific action plans and benchmarks for facilities determined to exceed the LOS policy in the local analysis. Alternative mode choices should be identified to further reduce travel demand in addition to placing an emphasis on connectivity, including new development, retrofits and interconnected parking lots in commercial/employment areas. Overall, commuter rail is expected to be an important part of the modal mix of improvements for this part of the region because it offers separate right-of-way for transit service in a corridor that is expected to experience congestion during the morning and evening two-hour peak period. The local TSP should also consider strategies for providing better access to commuter rail.

## **6.8 Outstanding Issues**

The section describes a number of outstanding issues that could not be addressed at the time of adoption of this plan, but should be addressed in future updates to the RTP.

### **6.8.2 ~~Damascus/Boring-Pleasant Valley TCSP Concept Planning~~**

~~Metro was recently awarded a special federal TCSP grant from the US Department of Transportation to complete an urban reserve plan for the Damascus-Pleasant Valley area of Clackamas County. The work scope for the project is broad, encompassing land-use, transportation, and environmental planning. The project is scheduled to begin in early 2000. The objective of the study is to prepare concept plans for this large urban reserve area in anticipation of future urbanization. Metro will work with a number of local partners to complete the project, including the cities of Portland, Gresham and Happy Valley, and Multnomah and Clackamas counties. A citizen policy advisory committee that includes residents and key stakeholders will guide the project.~~

The Damascus-Pleasant Valley planning effort will include conceptual transportation planning for regional facilities in the area, and more detailed street planning for northern portions of the area that are already included in the urban area. Transportation and land use scenarios will be developed to reflect a variety of land use alternatives for the area, and will be analyzed with the regional transportation model.

The preferred alternative will likely include refinements to the Damascus-Pleasant Valley street functional classifications and transportation improvements included in this plan.

Metro received federal grant money for the purpose of completing a concept plan for a new urban area in the Damascus/Boring area. Clackamas County and Metro will jointly develop the concept plan, with the assistance of a Contractor and the participation of area citizens, key organizations, service providers and cities. ODOT will also participate in the process. The concept planning is anticipated to start in winter of 2003, will take approximately two years to complete. There will be extensive public involvement during this process.

The Damascus/Boring Concept Plan will be a cooperative planning effort to create plan and implementation strategies for development of approximately 12,000 acres located south of Gresham and east of Happy Valley in Clackamas County. The concept plan is a follow-up to a December 2002 decision by Metro to bring the area inside the Urban Growth Boundary. The Damascus/Boring Concept plan will be closely coordinated with the environmental analysis of the Sunrise Corridor Unit 1 effort and will address the general need, modes, function, and location of the proposed Sunrise Corridor Unit 2. Important components of the concept plan are expected to include:

- A land-use element that locates a combination of uses and densities that support local and regional housing and employment needs, provides a diverse range of housing, and identifies commercial and industrial employment opportunities that allow residents to work near their home
- A multi-modal transportation system element that serves interstate, regional and community travel needs and informs the Sunrise Corridor Unit 2 planning process
- A natural resources element that identifies natural resource areas and protection strategies
- A public infrastructure and facilities element for water, sewer, storm water, parks, schools, fire and police

The concept plan will provide the basis for future comprehensive plan amendments and development code regulations that must be adopted before development can take place. The Damascus/Boring Concept Plan will identify and evaluate multi-modal transportation system alternatives to serve regional and community needs in the area. The alternatives will include combinations of highway, arterial, boulevard and transit improvements that are complemented by a network of local streets, multi-use trails and bicycle and pedestrian connections. If the Damascus/Boring Concept Plan reaffirms that Sunrise Corridor Unit 2 improvements are needed, the concept plan will identify transportation alternatives to be evaluated through a future DEIS process similar to that already initiated for the Unit 1 portion of the Sunrise Corridor.

Proposed amendments to the RTP would be considered upon completion of the study, which is scheduled to conclude in Fall 2002. The preferred alternative will also include future street plans for some local streets that may be incorporated into local TSPs.

### 6.8.3 Regional Transportation Model Enhancements

#### *Multi-modal Performance Measure Development*

Section 660.012.0060 of the state Transportation Planning Rule allows for the development of alternative measures for evaluating transportation function and efficiency. Though the principal measure in this plan measures motor vehicle performance, future updates to the plan should use a multi-modal measure that better reflects transportation needs and potential solutions. Such measures are already used for Areas of Special Concern identified in Chapter 1 of this plan, but should also be considered in other areas to better evaluate both the need and relative effectiveness of multi-modal transportation solutions.

#### *Tour-Based Modeling and TRO Enhancements*

Tour-based modeling represents a departure from the current trip-based model used to develop the RTP. In contrast to the current model, tour-based modeling allows for a much more detailed analysis, since it does not rely on the somewhat generalized assumptions that accompany the current model. In the current system, land-use and transportation assumptions are created for each of 1,260 traffic zones that form the smallest building block for analysis. Tour-based modeling will allow data to be evaluated to the tax lot or parcel level, which will result in a much more detailed and flexible system for testing proposed transportation improvements.

The recently completed Traffic Relief Options (TRO) project was the first Metro effort to use tour-based modeling. This study tested the effects of congestion pricing on travel in the region, and allows relative pricing costs to be evaluated in terms of the ability to redistribute travel and manage congestion. The tour-based model with TRO enhancements could offer a unique new tool for future RTP updates, as the concepts of congestion pricing and tolling are likely to be considered as major transportation strategies.

#### *Bicycle and Pedestrian Modeling*

The existing regional transportation model probably underestimates bicycle and pedestrian trips, and does not predict bicycle travel according to the transportation network. Instead, the current model predicts bicycle and pedestrian trips as part of the "mode choice" step of the modeling process, but does not assign these trips to a network to predict how they might be distributed. While pedestrian trips are generally short enough to make a network assignment impractical, bicycle trips are of sufficient length to be assigned to a network and evaluated at this level. As part of a future update to the RTP or the Regional Bicycle Plan, Metro will develop a bicycle network modeling process that will improve the region's ability to plan for bicycle travel.

#### *The ODOT Willamette Valley Model*

ODOT has developed a more detailed set of travel zones for the Willamette Valley, which will allow Metro to better predict travel demand at "gateway" points where Willamette Valley traffic enters the region. Currently, the regional model simply projects historic traffic volumes on such routes, but is unable to evaluate how congestion, parallel routes, and distribution of employment in and outside the region affects travel demand at these "gateway" locations. The ODOT Valley

Model has been used in other Metro transportation projects, and should be considered for the next RTP update.

#### **6.8.4 Connectivity Research**

In 1996, Metro completed the Regional Street Design study, a project that resulted in new regional street design classifications in the RTP and connectivity provisions in the UGMFP. The connectivity provisions were based on a series of five case studies of subareas within the Metro region. These areas averaged two square miles in area, and ranged from a very urbanized neighborhood in Portland, to developing areas in Clackamas and Washington counties. For each subarea, conceptual street systems were used to evaluate the benefits of varying levels of street connectivity. The results of this analysis are published in Metro's technical report *Street Connectivity Analysis* (1997).

The connectivity analysis in the 1996 study was limited to motor vehicles, and while the findings from the study are conclusive, the consultant for the project recommended an expanded analysis of one or two of the subareas to confirm the sensitivity analysis included in the original study.

A follow-up study is proposed to confirm the motor vehicle findings of the 1996 study, and expand the analysis to examine the effects of varying levels of connectivity on pedestrian, transit and bicycle travel. This follow-up study could result in proposed changes to existing UGMFP connectivity requirements. This follow-up study is scheduled to be conducted by Metro upon completion of the 2000 RTP update, and recommendations from the study could be considered for adoption in 2001.

#### **6.8.5 Ramp Metering Policy and Implications**

During the 1990s, ODOT has increasingly managed access to the principal arterial system (freeways and highways) with ramp metering. This system of signaled ramp controls allows ODOT to remotely manage traffic flows onto the system to streamline merges and prevent bottlenecks during peak travel periods. Ramp meters provide a low-cost alternative for adding system capacity and enhancing safety. However, as traffic volumes continue to increase on the principal arterial system as well as connecting major and minor arterial routes, the practice of ramp metering will become more complex. Already, local concerns about ramp "storage" capacity forcing backups onto local routes have required ramp expansions in some locations where metering is used.

As part of the next update of the RTP, the policy considerations raised by ramp metering should be addressed. The fundamental principle behind ramp metering is to maintain traffic flows on principal routes as a priority over local arterial routes. However, this assumption should be carefully evaluated on the basis of the performance and reliability requirements of the freeway system in the context of the new land use patterns and street classifications and configurations evolving out of the Region 2040 growth concept.

#### **6.8.6 Green Corridor Implementation**

Green corridors were adopted as part of the 2040 Growth Concept. They are designated in rural areas where state-owned highways connect neighbor cities to the metro area. The purpose of green corridors is to prevent unintended urban development along these often heavily traveled routes, and

maintain the sense of separation that exists between neighbor cities and the Metro region. The green corridor concept calls for a combination of access management and physical improvements to limit the effects of urban travel on the routes on adjacent rural activities.

In several corridors, Metro has already developed inter-governmental agreements (IGAs) with local governments to address access management issues. However, IGAs are not in place in most corridors, and physical improvements, such as street and driveway closures, landscaping and public signage have not been implemented in any green corridors. During the next several years, Metro will continue to work with ODOT and affected local jurisdictions to complete IGAs for the remaining green corridors, and develop plans for necessary improvements. Such improvements should be incorporated into future updates of the RTP.

#### **6.8.7 2040 Land-use and Transportation Evaluation**

Though the RTP contains a number of land-use recommendations, more work is needed to further evaluate RTP and 2040 Growth Concept to determine potential land-use changes that would be beneficial to the transportation system. This evaluation would consider directing growth away from areas that do not have adequate transportation systems, and focusing growth in areas with surplus transportation capacity, as well as improving the balance of jobs and housing to reduce long-distance commuting on the principal arterial system. The evaluation would also include an analysis of the effect of relative wages on the mix of jobs and housing needed to realize transportation benefits.

- *Damascus & Pleasant Valley Urban Reserves:* The overall jobs/housing imbalance in Clackamas County results in heavy travel demand on routes like I-205 and Highway 224 that link Clackamas County to employment areas. A review of the Damascus and Pleasant Valley Urban Reserves should consider the potential for improving jobs/housing balance in these areas. This review should include areas in the Pleasant Valley areas that have been recently incorporated into the urban area, but are largely undeveloped.
- *Beavercreek Urban Reserves:* Urbanization of these reserves would require major improvements to Highway 213 and connecting arterial streets that may be inappropriate in scale and cost, and could negatively impact adjacent areas in Oregon City.

### 6.8.8 Industrial Lands Evaluation

Additional work is needed in Tier 2, 3 and 4 urban reserve lands to determine where strategic transportation improvements could be implemented to make industrial land more viable for development. This evaluation would identify key areas for industrial development where non-transportation actions would enable industrial development that complements the planned transportation system.

### 6.8.9 TDM Program Enhancements

The TDM Subcommittee is in the process of developing a 3-5 year strategic plan that clearly articulates a new vision and proposed direction for the Regional Travel Options program. The strategic direction is to develop a more collaborative marketing program that eliminates duplication of marketing effort and that delivers a clear message to all of our customers (students, commuters, aging population, shoppers, etc). The regional evaluation program will also become more collaborative as we work to develop performance measure and evaluate progress toward non-SOV modal targets for regional centers and industrial areas. The strategic plan will update TDM policies resulting in RTP Amendments that reflect new strategies for promoting travel options to the region.

In addition, the TDM program should be continually updated to include new strategies for regional demand management. One such strategy that should be considered is the Location Efficient Mortgage (LEM). The LEM is a mortgage product that increases the borrowing power of potential homebuyers in "location efficient" neighborhoods. Location efficient neighborhoods are pedestrian friendly areas with easy access to public transit, shopping, employment and schools. The LEM recognizes that families can save money by living in location efficient neighborhoods because the need to travel by car is reduced. Instead of owning two cars, a family living in a location efficient neighborhood could get by with one - or none. The LEM requires bankers to look at the average monthly amount of money that applicants would be spending on transportation if they had to use a car for day-to-day transport and applies it to the servicing of a larger mortgage. This increases the purchasing power of borrowers when buying a home in location efficient neighborhoods, stimulating home purchases in existing urban areas.

### 6.8.10 Transportation Performance Measures

The 2000 RTP marks-marked the first time in the 18-year evolution of the plan that a performance measure other than congestion is adopted as regional policy. The newly incorporated Area of Special Concern designation allows for a broader definition of performance in mixed use centers and corridors, where transportation solutions solely aimed at relieving congestion are inappropriate for functional, physical, financial or environmental reasons.

However, the Area of Special Concern designation is only a first step toward a more broadly defined set of performance measures. Future updates of the RTP should continue to expand the definition of performance to encompass all modes of travel as they relate to planned land uses. While congestion should be factored into a more diverse set of measures, it should be evaluated in a more comprehensive fashion to ensure that transportation solutions identified in future RTP updates represent the best possible approaches to serving the region's travel demand.

### **Section 6.8.11 Transit Stop Planning**

Tri-Met, in cooperation with regional partners, defined most of the major transit stops as a part of the Primary Transit Network planning process in 1997. Planning for the location of transit station continues as Tri-Met and other transit providers participate in specific corridor planning or implements elements of their strategic plan. Amendments to Figure 1.16 will be necessary as these planning efforts continue. As these planning efforts will include participation from the affected local jurisdictions, amendments to their transportation system plans should be made as planning is completed.

As a part of these planning efforts, transit providers may consider policy standards for station spacing for particular types of service lines, amenities to be provided at transit stops and design standards for those amenities. Jurisdictions are also encouraged to undertake transit stop area plans at major transit stops on rapid bus lines, similar to previous planning efforts for light rail stations.

### **6.8.12 Job Access and Reverse Commute**

The Transportation Efficiency Act (TEA-21) of 1998 included the Job Access and Reverse Commute Program to address the mobility challenges facing welfare recipients and low-income persons. This grant program requires States to develop solutions collaboratively with Metropolitan Planning Organizations (MPOs), local and regional transportation agencies and social service providers. The federal Job Access and Reverse Commute Program provides grants to help States and localities develop a coordinated, regional approach to new or expanded transportation services that connect welfare recipients and other low-income persons to jobs and other employment services. Job Access projects support developing new or expanded transportation services such as shuttles, vanpools, new bus routes, guaranteed ride home programs and other transit service expansion for welfare recipients and low-income persons. Reverse Commute projects provide transportation services to suburban employment centers from urban, rural and other suburban locations for all persons.

In response to the federal legislation, the purpose of the Portland Job Access Plan is to connect low-income persons and those receiving Temporary Assistance to Needy Families (TANF) with employment areas and related services in the Portland metropolitan region. The community to be served includes approximately 220,000 people with incomes 150 percent below the poverty level. In 1999, Phase I funding for Portland's Job Access Plan matched existing local resources with federal funds to provide over 87,000 new transit rides for low-income and welfare recipients in Washington, Clackamas and Multnomah counties. The new services improved connections and services to both urban and rural areas of the tri-county area using a combination of public, non-profit and private providers. This has allowed individuals with limited resources to enhance their access to the regional transit network and reduce their transportation burdens. The Regional Job Access Committee represents more than 20 organizations, including Metro, transit providers, social service agencies, child care providers and employers.

Many of today's entry-level positions do not work traditional work hours and the public transportation system is less efficient or non-existent during off-peak shift times. More than 75 employers, representing more than 25,000 employees, have new transportation options for these "hard to serve" shifts from the first year federal Job Access funds. New transportation options range

from carpool incentives to evening or early morning shuttle services which allow low-income job seekers access to otherwise unattainable employment locations.

While job training is a key to job placement, the Portland Job Access Plan recognizes that travel training is a key to job retention. Knowing how to use the available transportation services can ease the commute and provide options for childcare. The plan stresses regional coordination and information access as a key to preparing welfare recipients for their commute.

### 6.8.13 Financial Implementation

JPACT will convene a committee to address transportation funding issues. This committee will consider the information and concepts addressed in Section 5.4 and report back to JPACT with a funding implementation strategy and an analysis of how the strategy addresses the principles identified in Section 5.4.1. JPACT and its transportation funding committee will work with other government agencies, private sector and non-profit agency efforts to address transportation funding in the state and region as it considers its implementation strategy. This effort will lead to proposals for new sources of transportation revenue to build, operate and maintain the RTP Priority system.

### 6.8.14 RTP Modal Targets Implementation

Metro was recently awarded state Transportation/Growth Management funds to identify best practices and further clarify what constitutes a minimum requirements for local transportation system plans to meet the RTP modal targets. Metro's primary goal is to ensure that the planning programs be adopted, and that on-the-ground progress be demonstrated over time. However, progress toward the non-SOV modal targets is an output of the regional travel demand model, but cannot be generated by local jurisdictions. Progress would be periodically evaluated as part of RTP updates. The project will:

- Identify best practices and minimum requirements for local governments to demonstrate that local TSPs can meet non-SOV mode split targets in the RTP. Meeting this objective will allow Metro to ensure RTP compliance with Section 660-012-0035(5) of the Transportation Planning Rule.
- Ensure that minimum requirements identified are reasonably sufficient to enable local jurisdictions to achieve the Non SOV Modal Targets of Table 1.3 and the Alternative Mode Analysis of section 6.4.6 of the RTP.
- Ensure that minimum requirements identified can be carried out by Metro and/or local jurisdictions without a significant commitment of staff time or other resources.
- Provide education on the benefits of reducing non-SOV mode trips.

This effort could result in amendments to the RTP.

### 6.8.15 Defining System Adequacy

Section 660.012.0060 of the Oregon Transportation Planning Rule (TPR) requires local governments to evaluate amendments to acknowledged plans and regulations to ensure that the changes are consistent with planned transportation improvements. For the Metro region, the RTP defines the "preferred" system of improvements for major transportation facilities as the basis for evaluating such amendments.

However, given that a XX percent funding shortfall between the preferred system and existing revenue projections exists, this methodology can result in plan amendments being justified by transportation improvements that are unlikely to occur in a timely period, due to the current funding shortfall. Under this scenario, a more realistic basis for evaluating the system might be the “financially constrained” system, which represents just XX percent of the larger “preferred” system, and is based on recent funding history. Conversely, using the much more conservative financially constrained system for this analysis risks turning away unanticipated economic development that is consistent with the general intent of a local plan, but requiring greater transportation infrastructure than is provided in the constrained scenario.

Prior to the next update to the 2004 RTP, the issue of defining an adequate system of improvements for the purpose of evaluating local plan amendments should be addressed in detail to ensure a balance between allowing desired development and preventing land use actions that outstrip the public ability to provide transportation infrastructure. This effort should include a cross-section of local and regional interests and state agency officials, and could lead to recommended RTP amendments that implement a new strategy for considering such proposals. The effort should be led jointly by Metro and the Oregon Department of Transportation.

#### 6.8.16 Wilsonville I-5 South Corridor

Based on the results of the *I-5/Wilsonville Freeway Access Study* (DKS Associates, November 2002, prepared for ODOT and the City of Wilsonville, with Metro’s participation), there will be a future deficiency for freeway access capacity in Wilsonville based on year 2020 PM peak forecasts. Improvements were identified in the City of Wilsonville’s *2003 Transportation Systems Plan* to address this deficiency, but did not include the effects of the planned southern alignment for the I-5 to 99W Connector to the Stafford Road Interchange, the plans for which were outside of the scope of the TSP. The improvements include an improved local street system in Wilsonville, freeway access improvements and I-5 operational improvements. Improvements to the local roadway system are not adequate by themselves to mitigate the future 2020 interchange access needs without interchange improvements. In evaluating two freeway access improvement alternatives (an enhanced Wilsonville Road diamond interchange and a new Boeckman Road interchange to I-5) it was found that improvements to the Wilsonville Road interchange would be necessary with either interchange alternative. Based upon the findings of study, an enhanced Wilsonville Road diamond interchange, currently in preliminary engineering, is needed to meet future 2020 capacity demands. Implementation of the enhanced Wilsonville Road diamond interchange project depends upon funding availability.

The analysis of future freeway access needs was conducted with a wide range of travel forecasts, assessing the sensitivity of the findings in the 2020 PM peak period with various travel demand assumptions. In each case, the findings noted above were found to be consistent in terms of the required first step being the enhanced Wilsonville Road diamond interchange. However, utilizing an approximation technique to extend 2020 forecasts to 2030, it was found that in 2030 widening of I-5 to eight lanes would be required to meet interstate freeway capacity standards set by Metro and ODOT and that freeway access capacity would not be adequate with the improved I-5/Wilsonville Road interchange and further access improvements would be necessary. Thus, other freeway access improvements (e.g. a new Boeckman Road interchange) must be considered in future regional capacity studies, including the Regional Transportation Plan update, I-5 South Corridor Study, I-5

to 99W Connector and/or a Stafford/I-205 Study in conjunction with possible urban growth boundary expansions and industrial land evaluations.

**6.8.17 National Highway System (NHS) Routes Update**

A component of the federal requirements that warrants special effort is a needed update to the National Highway System (NHS) designations in the RTP. These routes were originally designated in the early 1990s, and are due for an update that considers 2040 land use and transportation considerations that have since been adopted into regional and local plans. This effort will occur prior to the next RTP update.

# Summary of Recommendations on Public Comments Received

October 31 – December 4, 2003

## Discussion Items

Comment 1: Proceed with adoption of the federal RTP, however, do not adopt a revised RTP that attempts to meet the Transportation Planning Rule and other state planning requirements. Direct Metro TPAC to establish a work program for undertaking a comprehensive update of the RTP. (Washington County, 11/21/03)

TPAC Recommendation: Agree. Recommend adopting a federal RTP only and withdrawing Ordinance 03-1024 at this time. The federal RTP would include an updated set of financially constrained projects and a larger set "illustrative projects" for federal planning purposes. The U.S. Department of Transportation (DOT) and the U.S. Environmental Protection Agency (EPA) approved and acknowledged the 2000 RTP air quality conformity determination on January 26, 2001. Under federal regulations, the RTP must be updated every three years to ensure that the plan adequately addresses future travel needs and is consistent with the federal Clean Air Act. As a result, a new plan demonstrating conformity with the Clean Air Act must be approved and acknowledged by US DOT and US EPA in a formal conformity determination by January 26, 2004, when the 2000 RTP conformity determination expires.

Metro is not required to update the regional transportation plan for state planning purposes until 2007. The next RTP update will begin in 2005, and is proposed to be a more expansive effort that involves broader public discussion of plan policies and projects. The next update will address state and federal planning requirements.

Projects that have been added to the 2004 RTP and that are not included in the 2000 RTP priority system would require compliance with statewide planning goals through a separate amendment to the 2000 RTP priority system prior to construction. The goal would be to complete this amendment process within the next 3 months.

Comment 2: Add the Vancouver Rail Bridge Project to the Financially Constrained System as a priority of the Regional Transportation Plan. The project is to replace the existing "swing span" with a "lift span" and place it closer to the middle of the river. Estimated cost is \$42 million. (Ad-Hoc Steering Committee for the Vancouver Rail Bridge Upgrade Project, 11/26/03)

TPAC Recommendation: The project is not currently eligible for federal funds under the Truman-Hobbs Act. Funding for the project would not come from sources used to forecast the financially constrained Regional Transportation Plan and alternate sources such as Truman Hobbs, lottery or railroad funds cannot be assumed as "reasonably available." Therefore, amend the project into Preferred System only.

Metro Resolution No. 03-3271 identifies this project as a priority project in the region, if eligible to receive Truman Hobbs funding. Truman Hobbs is a federal program that funds projects to address rail hazards to navigation. TPAC recommends that future regional position papers seek amendment to the Truman Hobbs Act to allow analysis of the navigational hazards to account for truck and auto commerce vehicle delay on the I-5 bridge due to the lift span operations caused by the railroad bridge. The rail bridge swing-span is lined up with the lift span on the I-5 bridges making it difficult and hazardous for ships to use the I-5 "high" fixed span section. Using the fixed span section avoids the need for opening the bridge and the resulting delay on I-5.

In addition, the I-5 Trade Corridor Study Environmental Impact Statements (EIS) study will evaluate replacement of the I-5 bridge with drawbridge and "high" fixed span alternatives. If the I-5 EIS process recommends a drawbridge replacement, then the I-5 bridge replacement project should be responsible for replacing the rail bridge swing span. If the I-5 EIS process recommends a "high" fixed span replacement, then replacement of the railroad swing span becomes less of an issue. Although the timing of a "high" fixed span replacement could be an issue and may result in the need to construct an interim improvement for which funding is not identified.

**Comment 3:** How does Metro plan to respond to an increase in expected long-term state revenues due to passage of OTIA 3? (TPAC, 10/31/03)

TPAC Recommendation: Recommend that a post-adoption process be used to identify approximately \$300 million in additional projects to be candidates for inclusion in the financially constrained system, should the revenue forecast increase beyond what is assumed in the 2004 RTP. These projects would be selected using the same methodology as that used to develop the 2004 financially constrained system.

Comment 4: Recommend amending the RTP as defined in Attachment 1 to establish two tiers of industrial areas ("regionally significant" and "local") for the purpose of transportation planning and project funding. This amendment provides clear, immediate prioritization of RSAs for transportation planning and funding decisions, but is also based on proposed Title 4 amendments that are still in development. This amendment will help support efforts to focus future transportation investments to those parts of the region that are most critical to the region's economy and successful implementation of the 2040 Growth Concept. (MTAC, 12/3/03)

TPAC Recommendation: Agree. Amend as requested. This comment has also been forward to MPAC for consideration at the December 10 meeting. Attachment 2 identifies a second option discussed by TPAC.

Comment 5: It is premature to remove the regional freight system designation entirely on McLoughlin Boulevard (99E) between Highway 224 and I-205 south ramps in Oregon City. There are industrial properties throughout the Corridor with the largest being an area near Roethe Road of about 80 acres. The area adjacent to McLoughlin Boulevard is a major destination for freight. It serves everything from industrial to retail including a major auto sales area. McLoughlin Boulevard would be an alternative for traffic including freight when Highway-224 and I-205 is closed or congested due to incidents on this route. The County recommends leaving the designation as is and plan on reviewing the classification as part of the major RTP update that is expected to start within the next year. If a change is necessary, the County recommends that McLoughlin Blvd be down graded to a Road connector. (Clackamas County, 12/3/04)

TPAC Recommendation: Recommend downgrading this segment of McLoughlin Boulevard from a Main Roadway Route to a Road Connector to recognize that this route serves a less important function than a Main Roadway Route. Main roadway routes are intended to connect major activity centers in the region to other areas in Oregon or other states. Road connectors are intended to connect freight facilities or freight generation areas to the Main Roadway Routes. The regional freight system map will be more thoroughly updated in the next RTP update, in order to evaluate potential freight designations from a regional system point of view.

## Consent Items

### PACKET 1 – POLICY UPDATE

Comment 6: Add the Washington Square Regional Center Greenbelt Trail to the Regional Bicycle System Map. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Amend as requested. In addition, TPAC recommends adding this multi-use trail to the Regional Pedestrian System.

Comment 7: Beef Bend, Gaarde and Walnut from Gaarde to Scholls are arterials in the TSP but listed as collectors in the RTP. When Tigard adopted the TSP, it was acknowledged that these discrepancies exist. The RTP should be updated to reflect these classifications. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. These changes are reflected in the October 31, 2003 public comment draft policy update packet.

Comment 8: The street design section has N Ivanhoe (Richmond to Philadelphia) updated to Community Street. This item should be removed from the list of proposed policy amendments because the existing classification is Community Street. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 9: McLoughlin Boulevard - Urban Road termini should change from SE 17<sup>th</sup> – City limits to Woodward – 17<sup>th</sup>. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 10: N Richmond (Lombard to Ivanhoe) should remain a Community Street. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 11: NE Sandy's termini for the Regional Street classification should change from 12<sup>th</sup> – 47<sup>th</sup> to 54<sup>th</sup> – 57<sup>th</sup>. The street design classification should change from Regional Boulevard to Regional Street. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 12: NE Sandy's Regional Boulevard classification termini should change from 47<sup>th</sup> – 82<sup>nd</sup> to 57<sup>th</sup> – 82<sup>nd</sup>. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 13: Sandy Boulevard (98<sup>th</sup> – 122<sup>nd</sup>) is classified as a Regional Boulevard in the 2000 RTP not a Community Boulevard (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

*2004 RTP Update*

*Summary of Recommendations on Public Comments Received: October 31, 2003 – December 4, 2003*

Comment 14: SE 17<sup>th</sup> termini for Community Boulevard should change from Tacoma - Andover to Tacoma – Linn. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 15: NE/SE 39<sup>th</sup> termini for the Regional Street classification should change from Broadway – Powell to Broadway – Holgate. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 16: SE 39<sup>th</sup> termini for Community Street should change from Powell – Woodstock to Holgate –Woodstock. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 17: Add N Greeley Avenue between N Interstate Avenue and N Going Street as a Road Connector on the Regional Freight System map. Portland's TSP identifies Greeley as a Major Truck Street located in a Freight District. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 18: Delete the Gateway Regional Center from section 6.7.7 Areas of Special Concern. Portland's TSP has addressed this area in accordance with the Transportation Planning Rule. Delete or revise Figure 1.13b Gateway Regional Center – Special Area of Concern to reflect its current status. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 19: Update the Regional Motor Vehicle Classification, Regional Street Design and Regional Freight System Maps to reflect classifications recently adopted in the Wilsonville transportation system plan, as follows:

<u>Street Design Classification Map (Figure 1.4)</u>				
<u>Street Name</u>	<u>Location</u>	<u>Current RTP Classification</u>	<u>Proposed RTP Classification</u>	<u>Source of Change</u>
<u>95th Avenue</u>	<u>Boones Ferry Road to Boeckman Road</u>	<u>Not Classified</u>	<u>Collector of Regional Significance</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Boeckman Road to Barber Street</u>	<u>No Road</u>	<u>Planned Collector of Regional Significance</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Barber Street to Wilsonville Road</u>	<u>Not Classified</u>	<u>Collector of Regional Significance</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road</u>	<u>Railroad Tracks to 110th Avenue</u>	<u>No Road</u>	<u>Planned Minor Arterial</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road (old Tooze Road)</u>	<u>110th Avenue to Grahams Ferry Road</u>	<u>Not Classified</u>	<u>Minor Arterial</u>	<u>Wilsonville TSP</u>

<u>Street Design Classification Map (Figure 1.4)</u>				
<u>Street Name</u>	<u>Location</u>	<u>Current RTP Classification</u>	<u>Proposed RTP Classification</u>	<u>Source of Change</u>
<u>95th Avenue</u>	<u>Boones Ferry Road to Boeckman Road</u>	<u>Not Classified</u>	<u>Urban Road</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Boeckman Road to Barber Street</u>	<u>No Road</u>	<u>Planned Urban Road</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Barber Street to Wilsonville Road</u>	<u>Not Classified</u>	<u>Urban Road</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road</u>	<u>Railroad Tracks to 110th Avenue</u>	<u>No Road</u>	<u>Planned Community Street</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road (old Tooze Road)</u>	<u>110th Avenue to Grahams Ferry Road</u>	<u>Not Classified</u>	<u>Community Street</u>	<u>Wilsonville TSP</u>

<u>Regional Freight System Map (Figure 1.17)</u>				
<u>Street Name</u>	<u>Location</u>	<u>Current RTP Classification</u>	<u>Proposed RTP Classification</u>	<u>Source of Change</u>
<u>Boones Ferry Road</u>	<u>Day Street to 95th Avenue</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Elligsen Road</u>	<u>Boones Ferry Road to Parkway Avenue</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>95th Avenue</u>	<u>Boones Ferry Road to Boeckman Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Boeckman Road to Barber Street</u>	<u>No Road</u>	<u>Planned Road Connector</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road</u>	<u>95th Avenue to Proposed Kinsman Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>

<u>Kinsman Road</u>	<u>Barber Street to Wilsonville Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Parkway Avenue</u>	<u>Boeckman Road to Town Center Loop W</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Town Center Loop W</u>	<u>Parkway Avenue to Wilsonville Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Wilsonville Road</u>	<u>Town Center Loop W to Kinsman Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>

(City of Wilsonville, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 20: Add a Main Roadway designation to the newly completed Highway 47 Bypass in Forest Grove to identify the route's function as a replacement to Tualatin Valley Highway from the Highway 47 bypass to the western Forest Grove city limits. (ODOT, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 21: We are concerned that the current RTP update, in the crunch to meet a constrained timeline, will move the region away from the principles and modal goals set out in the 2000 RTP. Recognizing that the region must move forward with this RTP update in order to meet federal deadlines, CLF and the BTA urge the Council to note that the project mix in this update does not reflect a well-thought-out, well-coordinated strategy to achieve a truly multi-modal transportation system.

Looking forward to the next major RTP update, we urge Metro to start the process in 2004 and set a clear goal of achieving a mode split that looks more like that contained in the 2000 RTP, a document developed with extensive and meaningful public involvement. With virtually no public process and little technical evaluation, the current RTP update with its substantially shifted mode split should be considered an interim document. It should not be the basis of future plans. In addition, CLF and the BTA request a "seat at the table" in both technical and policy arenas to help ensure that the next major RTP update process supports the Region 2040 vision. (Bicycle Transportation Alliance and Coalition for a Livable Future and Lenny Anderson, 12/4/03)

TPAC Recommendation: No change recommended. There are no changes proposed for the mode share target policies in the RTP, though there is a shift toward road capacity projects in the overall breakout of the draft financially constrained system as indicated in the comment. The financially constrained system is also larger, in both total dollars and as a share of the "preferred" system. These changes reflect the OTIA effect on the revenue forecast which has focused primarily on modernization revenues for roads, but also the fact that some big transit capital projects have been completed since the 2000 RTP was adopted (including Central City Streetcar, Airport MAX and Interstate MAX). In addition, light rail to Vancouver was removed from the financially constrained system because of a lack of consensus in Clark County, Wa. to construct this improvement in the 20-year plan period. To this extent, the 2000 RTP had an unusually large amount of transit capital in the constrained system. There are also new local revenues in the forecast, with this revenue more typically directed at road capacity projects. The percentage of bike, pedestrian and boulevard projects also shifted slightly, increasing from 10 percent of the cost of projects in the 2000 RTP to representing 13 percent in the proposed 2004 RTP.

With regard to the request to have a "seat at the table," TPAC and JPACT membership is defined in by-laws. TPAC includes citizen membership opportunities. A decision has not been made whether to have a separate advisory committee for the next RTP update. However, if an advisory committee is formed, the Coalition for a Livable Future will be invited to participate.

Comment 22: Change the current "Road connector" classification on N Philadelphia from N. Lombard to N. Ivanhoe to "No Designation" on the Regional Freight System Map. (ODOT, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

## PACKET 2 – PROJECT UPDATE

Comment 23: Add the Washington Square Regional Center Greenbelt Trail to the RTP preferred and financially constrained systems for \$2 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. This change is reflected in the October 31, 2003 public comment draft project list as Project #6057.

Comment 24: Add the Walnut Street extension project to the RTP preferred and financially constrained systems for \$19 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. This change is reflected in the October 31, 2003 public comment draft project list as Project #6038.

Comment 25: Add Project # 6011 (Highway 217 South Mall overcrossing) to the financially constrained system and identify jurisdiction as Tigard and ODOT. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. These changes are reflected in the October 31, 2003 public comment draft project list.

Comment 26: Delete RTP project #6033 (Walnut Street Improvements, Phase I) and RTP project # 6046 (Walnut Street Improvements, Phase II) from the project list because they have been completed. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. These changes are reflected in the October 31, 2003 public comment draft project list.

Comment 27: RTP project # 6011 is listed on the RTP project list, however it is not identified on the RTP map or in the text of the RTP. Also, this project should be a Tigard jurisdiction as well as ODOT. This is the South Mall to Nimbus Connection identified in the Regional Center Plan. The Washington Square Implementation Plan identifies this project cost at approximately \$26 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Recommend adding to RTP map. Project description changes are reflected in the October 31, 2003 public comment draft project list.

Comment 28: RTP project # 6032 is listed on the RTP project list, however it is not identified on the RTP map or in the text of the RTP. The project description in Tigard's TSP

states: "Realign Hunziker Road to meet Hampton at 72<sup>nd</sup> Avenue – requires overcrossing over ORE 217 - removes existing 72<sup>nd</sup>/Hunziker intersection." The TSP estimates the cost for this improvement at \$10 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Recommend adding to RTP map. Project description changes are reflected in the October 31, 2003 public comment draft project list.

Comment 29: RTP project #6052 should have both Tigard and Beaverton under the jurisdiction as it enters both Cities. The project location is Nimbus Drive to Northern Mall area. The Washington Square Implementation Plan identifies this project cost at approximately \$30 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Recommend adding to RTP map. Project description changes are reflected in the October 31, 2003 public comment draft project list.

Comment 30: RTP project #6053 – the Washington Square Implementation Plan identifies this project cost at approximately \$38 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Recommend adding to RTP map. Project description changes are reflected in the October 31, 2003 public comment draft project list.

Comment 31: Project #1024 (I-5/McLoughlin Ramps) was not included in ODOT's financially constrained system and should be moved to the Expanded financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was included as part of City of Portland's Financially Constrained System revenue cap.

Comment 32: Move Project #1030 (Ross Island Bridgehead) to the Expanded financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was included as part of City of Portland's Financially Constrained System revenue cap.

**Comment 33:** Move Project #3129 (Glencoe Interchange) to the Expanded financially constrained system, if appropriate to be included in RTP at all, for air quality conformity. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was removed from the RTP project list altogether because it is located outside Metro's Planning Area Boundary. It will be modeled for air quality conformity.

Comment 34: Move Project# 5135 (McLoughlin Boulevard improvements from I-205 to 10th Avenue) to the Expanded financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was included as part of Clackamas County's Financially Constrained System revenue cap and received funding from the MTIP.

**Comment 35:** Add I-5/99W Connector Ph. 1 Arterial Connection to financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was included in the financially constrained system as Project #6141.

**Comment 36:** Add new Highway 217 project to construct braided southbound on-ramp from Beaverton-Hillsdale Highway and southbound off-ramp to Allen Boulevard. Add this project to the Expanded financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: This project is part of RTP Project #3023 which is in the preferred system only. Recommend including the project on an expanded financially constrained system that will be developed as a post-adoption activity.

Comment 37: Update the project names for the streetcar projects as follows:

- #1015 - Portland Streetcar - Phase 3a (River Place)
- #1086 - Portland Streetcar - Phase 3b (Gibbs)
- #1087 - Portland Streetcar - Phase 3c (Bancroft)
- #1106 - Portland Streetcar - Eastside, Phase 1 (Lloyd District)
- #1107 - Portland Streetcar - Eastside, Phase 2 (CEID)

(City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 38: Project #1199 - Barbur Boulevard Pedestrian Access to Transit Improvements should be moved to the Preferred System. The I-5/Barbur Corridor Study will precede improvements in this corridor. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 39: Project #2016 – NE Halsey Bikeway should be moved to the Preferred System. Due to right-of-way constraints, the project needs additional study to determine feasibility. The Tillamook Bike Boulevard provides an alternative route through this section of northeast Portland. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 40: Project #4015 – US-30 Bypass Improvements Study should be combined with #4037. Delete #4015. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 41: Project #4030 – NE 11-13<sup>th</sup> Avenue Connector should be combined with #4037. Delete Project #4030. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 42: Project #4037 – Columbia and Lombard Intersection Improvements should be updated as follows:

- Name: Lombard – Columbia Connection near MLK Jr. Boulevard
- Description: Improve road connection between Columbia Boulevard and Lombard in the vicinity of MLK Jr. Boulevard to 11<sup>th</sup>/13<sup>th</sup>, to facilitate freight movement.
- Estimated Cost: \$16, 835,000

- Jurisdiction: Portland/Port
  - RTP Program Years: 2004 – 2009
- (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 43: Add back project #1106 to conduct a feasibility study of streetcar service in inner eastside Portland neighborhoods. (City of Portland, 11/17/03)

TPAC Recommendation: Agree. Amend as requested. This project was inadvertently replaced by a new project to construct phase 1 of the eastside streetcar between the Pearl district and the Lloyd district.

Comment 44: Project # 3099 (1<sup>st</sup> Avenue/Glencoe Road widening): Change program years from 2010-15 to 2004-09. (City of Hillsboro, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 45: Project #3118 (TV Highway/Brookwood Avenue intersection alignment): Change program years from 2010-15 to 2004-09. (City of Hillsboro, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 46: Project #3117 (Grant Street East-West connector/extension to Brookwood Pkwy): Change program years from 2010-15 to 2004-09. (City of Hillsboro, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 47: Project # 3139 (US 26 over crossing at 229<sup>th</sup> Avenue): Change program years from 2010-15 to 2004-09. (City of Hillsboro, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 48: Project #1185 – Change program years to 2004-09 to reflect scheduled project completion under MSTIP3 in 2004/05. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 49: Project #3011 – Change project description to read Cornell to 185<sup>th</sup> to be consistent with #3009. (ODOT, 11/6/03 and Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 50: Project #3036 – Change cost estimate to \$12.7 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 51: Project #3066 and #3067 - Change 2040 link from Beaverton Corridor to Bethany TC. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 52: Project #3069 – Change location to Allen to Beaverton-Hillsdale Hwy. and cost estimate to \$13.3 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 53: Project #3099 – Change jurisdiction to Washington County because road is planned to remain part of Countywide Road System (i.e., is and will be under County's roadway jurisdiction) and change cost estimate to \$14.8 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 54: Project #3103 – Change project location to 185<sup>th</sup> to Brookwood and cost estimate to \$34.8 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 55: Project #3115 – Change jurisdiction to Wash. Co. to reflect current roadway jurisdictional responsibility. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 56: Project #3133 – Change project description to read “Construct eastbound on-ramp, westbound off-ramp and southbound auxiliary lane” to reflect anticipated improvements already funded under OTIA. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 57: Project #3137 – Change cost estimate to \$12.5 million to reflect County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 58: Project #3142 – Change project location to read “170<sup>th</sup> to Cornelius Pass” with an estimated cost of \$21 million and program year of 2010-15. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 59: Project #3149 – Change project description to read “Relocate westbound on-ramp to construct westbound to southbound loop ramp and widen overcrossing to accommodate additional southbound through-lane”. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 60: Project #3174 – Change project location to “Leahy to 84<sup>th</sup> Ave.” and project description to “widen to 5 lanes...” to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 61: Project #3176 – Change project name to 95<sup>th</sup> Avenue Extension. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 62: Project #3180 – Change project description to read “Construct new collector with sidewalks and bike lanes.” (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 63: Project #3186 – Change project location to read “US 26 to Cornell Road” to be consistent with new proposed MSTIP project. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 64: Project #3188 – Change project location to read “Cornell Road to Laidlaw Road” to be consistent with new proposed MSTIP project. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 65: Project #3199 – For consistency with County Transportation Plan, change project location to read “143<sup>rd</sup> Avenue to future Springville Extension” and change cost estimate to \$21.3 million. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 66: Project #3202 – For consistency with County Transportation Plan, change project location to read “Future Springville Extension to Cornelius Pass” and include cost estimate of \$12.4 million. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 67: Project #3209 – Change 2040 link from Tanasbourne TC to Bethany TC. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 68: Project #3214 – Delete phrase “complete boulevard design improvements” from project description because project is not designated for boulevard design considerations in County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 69: Project #3215 – Change cost estimate to \$15.4 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 70: Project #6030 – Change cost estimate to \$41.6 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 71: Project #6043 – Change cost estimate to \$8.2 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 72: Add new project to Preferred System to widen 209th from Kinnaman to Farmington Road for \$21 million in the 2010-2015 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 73: Add new project to Preferred System to widen 174th from Bronson Road to Meadowgrass Road to 3 lanes with bike lanes and sidewalks for \$13.9 million in the 2016-25 time period. This project is the continuation of RTP project #3205 the 173<sup>rd</sup>/174<sup>th</sup> undercrossing of Hwy. 26. This route is also designated as an arterial road in both the 2000 RTP and the County's Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 74: Add new project to Preferred System to widen Springville Road from 185<sup>th</sup> to Portland Community College access to 5 lanes for \$3.8 million in the 2010-15 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 75: Add new project to Preferred System to widen Springville Road from PCC access to Kaiser Road to 3 lanes @ \$9.6 million in the 2016-25 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 76: Add new project to Preferred System to widen Laidlaw Road from West Union Road to Kaiser Road to 3 lanes @ \$11 million in the 2010-15 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 77: Add new project to Preferred System to widen Kaiser Road from Bethany Boulevard to Cornell Road to 3 lanes @ \$18.6 million in the 2010-15 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 78: Add new project to Preferred System to widen Kaiser Road from Springville to Bethany Boulevard to 5 lanes @ \$4.6 million in the 2016-25 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 79: Add new project to Preferred System to widen Jenkins Road from Murray Boulevard to 158th Avenue to five lanes @ \$7.3 million in the 2010-15 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 80: Add new project to Preferred System to widen 197<sup>th</sup>/198<sup>th</sup> from Tualatin Valley Highway to Baseline Road to 3 lanes @\$13.9 million in the 2016-25 time period. This is identified as a collector of regional significance in the 2000 RTP and is included in the County's Transportation Plan project list. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 81: Add new project to Preferred System "Cornelius Pass Interchange Improvement @ Hwy. 26 to add northbound to westbound loop ramp". Estimated cost is \$30 million and program year is 2016-25. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 82: Add new project to Preferred System to widen Barnes Road from Leahy to County Line to 3 lanes for \$7.5 million in 2016-25 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 83: Project #3024 – Delete project on US 26 from Cornell Road to 185<sup>th</sup> Avenue, which duplicates revised #3011. (ODOT, 11/6/03 and Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 84: Project #3043 – Delete seven-lane project on Walker Road from Cedar Hills to Murray because need shown in Washington County Transportation Plan is only five lanes. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 85: Remove project #6091, the Boeckman Road I-5 Overcrossing, from the financially constrained list and move it to the preferred system. (City of Wilsonville, 11/21/03 and 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 86: Add project #6093, the Barber Street extension, to the financially constrained list. The Barber Street Extension project was determined to be a higher priority

project because of its ability to have a greater impact on providing relief to the Wilsonville Road Interchange. (City of Wilsonville, 11/21/03 and 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 87: Add the Tillamook Branch Trestle project to the RTP. The project provides an important east-west multi-use trail connection across the Willamette River between Lake Oswego and Milwaukie. (Clackamas County Board of Commissioners, 11/21/03, and City of Lake Oswego, 11/24/03)

TPAC Recommendation: Agree. This bridge currently serves freight rail and has been identified as a possible future commuter rail connection. Amend project into the Preferred and Financially Constrained systems as a feasibility study to evaluate a bicycle and pedestrian component.

Comment 88: Revise description of Project #3013 to include construction of multi-use trail. (Tualatin Hills Parks and Recreation District, 11/24/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 89: Revise description of Project #3015 to include construction of multi-use trail. (Tualatin Hills Parks and Recreation District, 11/24/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 90: Add back a project to widen I-205 SB on-ramp at Airport Way for \$10 million (preferred system) in 2016-2025 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested. This project (#2070 in the 2000 RTP) was inadvertently replaced by the new project #2070, which is also needed in the 2004-09 time period.

Comment 91: Delete project #4019. There is no plan for another LRT station in PIC or for realigning track there. New Project #4060 is the correct LRT realignment project - to occur with future PDX terminal expansion east. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 92: Move Project #4029 to 2004-09 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 93: Revise 2040 location of Project #4030. This project is located in the Columbia Corridor, not PDX IA. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 94: Update Project #4038 cost to \$790,000. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 95: Move Project #4045 to 2004-09 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 96: Move Project #4060 to 2010-15 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 97: Update Project #4085 cost to \$350,000. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 98: Move Project #4086 to 2004-09 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 99: Add Project #1022 Sullivan's Gulch / Banfield Trail Feasibility Study (Regional Trail #37) to the financially constrained system at a cost of \$150,000. **This trail which would be on the north side of the freeway would connect the Eastbank Esplanade Trail to the I-205 Bike and Pedestrian Trail. The trail would connect the Central City, Lloyd District Regional Center, Hollywood Town Center and Gateway Regional Center.** (Metro Regional Parks and Greenspaces Department, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 100: Add preliminary engineering and design portion of Project #5052 17th Avenue Trolley Trail Connector (Regional Trail #30) to the financially constrained system at a cost of \$200,000. The project will connect the Springwater Corridor and Three Bridges project to the Milwaukie Town Center and Trolley Trail. The proposed project is within one-mile of downtown Milwaukie. (Metro Regional Parks and Greenspaces Department, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 101: Add the feasibility study portion of Project #5207 Mt. Scott Creek Trail (Regional Trail #48) to the financially constrained system at a cost of \$767,000. This project includes a feasibility study and the cost of trail design and construction, including an under-crossing for the trail at S.E. Sunnyside Road. (Metro Regional Parks and Greenspaces Department, 11/25/03 and City of Happy Valley, 12/4/03)

TPAC Recommendation: Add the feasibility study to the financially constrained system and consider adding the remaining portion of the project to the financially constrained system in future RTP updates to reflect feasibility study recommendations.

Comment 102: Add the feasibility study portion of Project #5095 Phillips Creek Trail (Regional Trail #32) to the financially constrained system at a cost of \$100,000. This trail includes a trail loop around Clackamas Regional Center, connecting to I-205 Bike / Pedestrian Trail and the North Clackamas Greenway Trail, following Phillips Creek. (Metro Regional Parks and Greenspaces Department, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 103: Add the feasibility study portion of Project #4076 Columbia Slough Trail (Regional Trail #45) to the financially constrained system at a cost of \$150,000. This trail would connect Kelley Point Park east to Blue Lake Regional Park. Implementation costs to be estimated following the completion of the study. (Metro Regional Parks and Greenspaces Department, 11/25/03 and Columbia Slough Watershed, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 104: Add a new study to evaluate a new west side arterial bridge over the Columbia River between the Ports of Vancouver and Portland to serve freight movement. The current I-5 Partnership recommendation to widen the existing I-5 bridge is not adequate to address traffic congestion in the I-5 corridor. (North Portland Neighborhood Association, 11/3/03 and Hayden Island Neighborhood Network, 11/26/03)

TPAC Recommendation: No change recommended. This option was already examined in the I-5 Trade Corridor Study and deferred to be addressed as part of the I-5 Environmental Impact Statement (EIS) Study (Project # 4009). The I-5 Transportation and Trade Partnership Strategic Plan directs the EIS study to evaluate whether or not a six-lane freeway plus two 2-lane arterials (one in the vicinity of the I-5 corridor and one in the vicinity of the railroad bridge) is a viable alternative for consideration in the EIS.

Comment 105: Reduce Project #2047 (Division Boulevard) project limits to be Kelly Street to Burnside Street and cost estimate to be \$3.5 million as requested in the **East Multnomah County submittal of October 20**. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 106: Reduce Project #2027 (Civic Neighborhood LRT Station/Plaza) cost estimate to be \$3.5 million. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 107: Update Project #2014 (Glisan Street Bikeway) project limits to be 162nd Avenue to 202nd Avenue and reduce cost estimate to be \$200,000. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 108: Reduce Project #2057 (Gresham RC Pedestrian Improvements) cost estimate to \$5 million. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 109: Add a new project to construct a MAX Path from Ruby Junction to Cleveland Station for \$2 million in the Preferred and Financially Constrained Systems. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 110: Add Project #2048 (Burnside **Boulevard** - Wallula to Hogan) to the Financially Constrained System. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 111: Update Project #2028 (Powell **Boulevard**) cost estimate to reflect \$7 million of local funds and \$5.25 million of OTIA funds. (ODOT, 11/6/03 and City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 112: Delete Project #2049 (Powell Boulevard) as this project is included in Project #2028. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 113: Add a new project to the Financially Constrained System called Lombard/St.\_Louis/Ivanhoe Multimodal Improvements from St Louis to Philadelphia. The project will implement signal and pedestrian crossing improvements to improve pedestrian safety and freight flow. The estimated cost is \$1.1 million and time period is 2004-09. This project implements a portion of the St Johns pedestrian district improvements (#1150). This phase was selected for MTIP funding and should be identified as a stand-alone project in the RTP. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 114: Add Project # 1095 (Union Station Multi-modal Center Study) to Financially Constrained System and update cost estimate to \$300,000. This project is a priority for the City of Portland; it was submitted in the most recent MTIP process and likely to be resubmitted for MTIP funding in the future. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 115: Add Project #1173 (Hillsdale TC Pedestrian Improvements) to the financially constrained system in the 2010-15 time period. This project constructs pedestrian and street network improvements for a Town Center warrant inclusion in the Financially Constrained System. This project is identified in the Portland TSP as a mid-term timeframe. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 116: Add Project #1096 (Barbur/I-5 Corridor Study) to the financially constrained system in the 2004-09 time period. This study is part of the Metro Corridor Initiatives Planning Program and its completion and recommendations will provide improved project definitions for several RTP projects in the vicinity of the Barbur Boulevard/I-5 Corridor. This project is identified in the Refinement Plans and Studies Chapter of the Portland TSP and the Regional Transportation Plan. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 117: Add a new project for the Capitol Hwy/Vermont/30<sup>th</sup> Ave. Intersection to the preferred and financially constrained systems for \$450,000 in the

2010-15 time period. This project will provide traffic safety and pedestrian and bicycle facility improvements at this intersection and approaching street segments. This project is identified as part of the Capitol Highway Plan adopted by City Council. It was not built as part of the initial street project improvements due to budget limitations. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 118: Add a new project for Capitol Highway between Sunset and Barbur to the preferred system for \$910,000 in the 2010-2015 time period. This project will provide pedestrian and bicycle facility improvements. This project is identified as part of the Capitol Highway Plan adopted by City Council. Portions of this project segment are rated as higher priority improvements. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe. (City of Portland, 12/3/03 and Glenn Bridger, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 119: Add a new project called SW Capitol Highway – Marquam Segment between Huber and Stephenson to the Preferred System. The project will provide improved pedestrian crossings and median design treatments. Estimated Cost: \$750,000 and Program Year: 2016-2026. This project is identified as part of the Capitol Highway Plan adopted by City Council. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe. (City of Portland, 12/3/03 and Glenn Bridger, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 120: Delete Project #2024 (Gateway RC Pedestrian District Improvements – Phase III) from the financially constrained system, but retain in Preferred System. Retain all other current project information. This is the last of a three phase implementation schedule of local street network development in the regional center. The first and second phase of this project should remain as is in the Financially Constrained System. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 121: The recently identified safety improvements (guardrails) to Boones Ferry Road and Arnold Street in southwest Portland should be added to the Portland TSP and Regional Transportation Plan. (Southwest Neighborhoods, Inc., 12/3/03)

TPAC Recommendation: No change recommended. This comment will be forwarded to the City of Portland for consideration.

Comment 122: Move Project # 1176 and #1177 to the 2004-09 time period. (Southwest Neighborhoods, Inc., 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 123: The description for Project # 1181 (Beaverton-Hillsdale Highway ITS) should be clarified to identify that it includes portions of Capitol Highway. The project should

also be expanded to include upgrading the street to fill in missing sidewalks and constructing street crossing improvements. Project #1184 is also very important. (Southwest Neighborhoods, Inc., 12/3/03 and Glenn Bridger, 12/4/03)

TPAC Recommendation: No change recommended. Project #1181 is to implement system management strategies to help traffic flow more efficiently in this corridor with signal timing and other measures. A separate project, Project #1176, has been identified for this corridor to address bicycle, pedestrian and access to transit needs, and is included in the financially constrained system. Phase 1 of Project #1184 has been included in the financially constrained system, which involves realigning Oleson Road to provide a direct connection to Beaverton-Hillsdale Highway and Scholls Ferry Road.

Comment 124: Add Project #1004, #1031, #1195 and #1196 to the financially constrained system. These are critical projects for moving traffic through southwest Portland in the Barbur/I-5 south Corridor. (Southwest Neighborhoods, Inc., 12/3/03 and Don Baack, Hillsdale Neighborhood Association, 12/4/03)

TPAC Recommendation: No change recommended. The four projects represent approximately \$134 million. While these projects are important improvements to serve this part of the region, the revenue forecast is not adequate to include these projects in the financially constrained system at this time.

Comment 125: Add a new project to reconstruct the Barbur Boulevard structures over Vermont Street and Newberry Street near Capital Highway/Barbur Boulevard Intersection. These structures had emergency repairs five years ago that were expected to last 10 years. (Southwest Neighborhoods, Inc., 12/3/03 and Don Baack, Hillsdale Neighborhood Association, 12/4/03)

TPAC Recommendation: No change recommended. This comment will be forwarded to the Oregon Department of Transportation.

Comment 126: Place the entire Wilsonville Road Interchange project within the Financially Constrained list, not just the PE and ROW with construction on the Preferred List. This is important because this project has been identified as a high priority project both by the City and by ODOT, as well as regional and federal partners who participated in ODOT's 2002 Freeway Access Study. The critical nature of this project is evidenced by the City of Wilsonville's commitment of \$3.5 million in the city's current budget to begin Phase 1 of the needed improvements. (City of Wilsonville, 12/4/03)

TPAC Recommendation: No change recommended. Preliminary engineering and right-of-way acquisition were identified by ODOT as priorities for inclusion in the financially constrained system. Given limited revenues assumed for the 20-year plan period, construction was not included at this time.

Comment 127: US 26 needs to be expanded to six lanes from Highway 217 to Cornelius Pass road. This improvement will support Oregon's economic recovery and increase the region's ability to move goods, services and people. The new lanes could be designed for high occupancy vehicles or for truck traffic only. (Tim Phillips, 12/4/03)

TPAC Recommendation: Agree. No change recommended. The October 31, 2003 draft RTP project list includes projects to widen US 26 to six lanes from Highway 217 to 185th

and interchange improvements at Cornelius Pass Road. These improvements are included in Projects #3008, #3009, #3011, and are in the financially constrained system. Project #3005 is a refinement study to complete planning for improvements in the corridor.

Comment 128: Transportation problems in the OHSU area needed to have a regional solution. In addition, it is important to have more time to comment on the proposed amendments; the City of Portland had submitted proposed amendments late so that there was little time to comment on them. He recommended Metro send a clear signal that this Council supports public comment. (David Rutledge, 12/4/03)

TPAC Recommendation: Agree. The public comment period on the 2004 RTP has been extended until 5 p.m. December 10 to allow more opportunity for public comment on recently recommended amendments.

Comment 129: The RTP does not adequately address transportation needs in the southwest Portland area. The OHSU Tram and improvements to US 26 serve this area, but do not reflect the true needs of the neighborhood. The \$15 million included in the RTP for Tram could be better used to address other, more important needs in the area. (Dr. Pamela Settlegood, President Southwest Hills Residential League, 12/4/03)

TPAC Recommendation: No change recommended. Metro funding has not been specifically targeted to the Tram. The funding assumptions include a mix of primarily local and private sources, including urban renewal funds, traffic impact fees and other sources. Metro recently allocated \$10 million to the City of Portland through the 2004-07 MTIP for use for North Macadam infrastructure improvements. To date Portland has indicated that this money is likely to be used to improve the street network, however, this has not been determined.

## PACKET 3 – TECHNICAL UPDATE

See Comment # 1 under the discussion items section.

## PACKET 4 – AIR QUALITY CONFORMITY DETERMINATION

Comment 130: Update Appendix 4 – Transportation Analysis Zone Assumptions (TAZs), to identify Wilsonville as a Tier 1 or Tier 2 Industrial Area. (City of Wilsonville, 11/21/03 and 12/4/03)

TPAC Recommendation: Agree. Recommend listing Wilsonville under the Tier 2 industrial areas assumptions as this 2040 designation better reflects the characteristics of the industrial lands in this area, particularly with regard to having a developing street system.

## CHAPTER 1

# Regional Transportation Policy

## 1.2 Connecting Land Use and Transportation

While the 2040 Growth Concept is primarily a land use planning strategy, the success of the concept, in large part, hinges on implementation of regional transportation policies identified in this plan. The following are descriptions of each of the 2040 Growth Concept land-use components and the transportation system envisioned to serve them. The 2040 Growth Concept land-use components, called 2040 Design Types, are grouped into a hierarchy based on investment priority. Table 1.1 lists each 2040 Design Type, based on this hierarchy. Figure 1.0 shows the adopted Region 2040 Growth Concept Map.

**Table 1.1**  
**Hierarchy of 2040 Design Types**

Primary land-use components	Secondary land-use components
Central city	<a href="#">Local industrial areas</a>
Regional centers	Station communities
<a href="#">Regionally significant industrial areas</a>	Town centers
Intermodal facilities	Main streets
	Corridors
Other urban land-use components	Land-use components outside of the urban area
Employment areas	Urban reserves
Inner neighborhoods	Rural reserves
Outer neighborhoods	Neighboring cities
	Green corridors

Source: Metro

### 1.2.1 Primary Components

The central city, regional centers, [regionally significant industrial areas](#) and intermodal facilities are centerpieces of the 2040 Growth Concept, and form the geographic framework for more locally oriented components of the plan. Implementation of the overall growth concept is largely dependent on the success of these primary components. For this reason, these components are the primary focus of 2040 Growth Concept implementation policies and most infrastructure investments.

#### Central city and regional centers

Portland's central city already forms the hub of the regional economy. Regional centers in suburban locales such as Gresham, Beaverton and Hillsboro are envisioned in the 2040 Growth Concept as complementary centers of regional economic activity. These areas have the region's highest development densities, the most diverse mix of land uses and the greatest concentration of commerce, offices and cultural amenities. They are the most accessible areas in the region by both auto and public transportation, and have very pedestrian-oriented streets.

In the 2040 Growth Concept, the central city is highly accessible by a high-quality public transportation system, multi-modal street network and a regional freeway system of through-routes. Light rail lines

radiate from the central city, connecting to each regional center. The street system within the central city is designed to encourage public transportation, bicycle and pedestrian travel, but also accommodate auto and freight movement. Of special importance are the bridges that connect the east and west sides of the central city, and serve as critical links in the regional transportation system.

Regional centers also feature a high-quality radial transit system serving their individual trade areas and connecting to other centers, as well as light rail connections to the central city. In addition, a fully improved network of multi-modal streets tie regional centers to surrounding neighborhoods and nearby town centers, while regional through-routes will be designed to connect regional centers with one another and to points outside the region. The street design within regional centers encourages public transportation, bicycle and pedestrian travel while also accommodating automobile and freight movement.

### **Regionally significant Industrial areas and intermodal facilities**

Regionally significant Industrial areas serve as “sanctuaries” for long-term industrial activity. A network of major street connections to both the regional freeway system and intermodal facilities primarily serves these areas. Many industrial areas are also served by freight rail, and have good access to intermodal facilities. Freight intermodal facilities, including air and marine terminals, freight rail yards and common carrier truck terminals are areas of regional concern. Access to these areas is centered on rail, the regional freeway system, public transportation, bikeways and key roadway connections.

While industrial activities often benefit from roadway improvements largely aimed at auto travel, there are roadway needs unique to freight movement that are critical to the continued vitality of industrial areas and intermodal facilities.

### **1.2.2 Secondary components**

While more locally oriented than the primary components of the 2040 Growth Concept, town centers, station communities, main streets and corridors are significant areas of urban activity. Because of their density and pedestrian-oriented design, they play a key role in promoting public transportation, bicycling and walking as viable travel alternatives to the automobile, as well as conveniently close services from surrounding neighborhoods. As such, these secondary components are an important part of the region’s strategy for achieving state goals to limit reliance on any one mode of travel and increase walking, bicycling, carpooling, vanpooling and use of transit.

#### **Station communities**

Station communities are located along light rail corridors and feature a high-quality pedestrian and bicycle environment. These communities are designed around the transportation system to best benefit from the public infrastructure. While they include some local services and employment, they are mostly residential developments that are oriented toward the central city, regional centers and other areas that can be accessed by rail for most services and employment.

### **Town centers and main streets**

Town centers function as local activity areas that provide close access to a full range of local retail and service offerings within a few miles of most residents. While town centers will not compete with regional centers in scale or economic diversity, they will offer some specialty attractions of regional interest. Although the character of these centers varies greatly, each will function as strong business and civic communities with excellent multi-modal arterial street access and high-quality public transportation with strong connections to regional centers and other major destinations. Main streets feature mixed-use storefront style development that serves the same urban function as town centers, but are located in a linear pattern along a limited number of bus corridors. Main streets feature street designs that emphasize pedestrian, public transportation and bicycle travel.

### **Local industrial areas**

Local industrial areas serve as important centers of local employment and industrial activities. A network of major street connections to both the regional freeway system and intermodal facilities generally serves these areas. Access to these areas is centered on rail, the regional freeway system, public transportation, bikeways and key roadway connections.

While local industrial activities often benefit from roadway improvements largely aimed at auto travel, there are roadway needs unique to freight movement that are critical to the continued vitality of these areas.

### **Corridors**

Corridors will not be as intensively planned as station communities, but similarly emphasize a high-quality bicycle and pedestrian environment and convenient access to public transportation. Transportation improvements in corridors will focus on nodes of activity – often at major street intersections – where transit and pedestrian improvements are especially important. Corridors can include auto-oriented land uses between nodes of activity, but such uses are carefully planned to preserve the pedestrian orientation and scale of the overall corridor design.

## CHAPTER 6

# Implementation

### 6.8 Outstanding Issues

#### **6.8.X Regionally Significant Transportation Areas**

In 2003, the region determined a need to protect economic development opportunities by ensuring a long-term supply of large industrial sites for future employment. To meet this need, Metro proposed limits on the types and scale of non-industrial activities in industrial areas. A new industrial design type called Regionally Significant Industrial Areas (RSIA) was proposed as a mechanism for enacting these provisions.

As part of this proposal, private investment in areas with the RSIA designation could be encouraged through complementary public investments, such as transportation and other infrastructure improvements. The Regional Transportation Plan (RTP) already includes many projects and programs needed to meet this objective, but does not distinguish between the existing industrial designation, and the new RSIA designation, which represents a subset of the larger industrial land base.

To better support the increased emphasis on transportation investments in RSIA's, the 2006-09 Metro Transportation Improvement Program (MTIP) should include new criteria that places greater emphasis on projects that serve these areas, and result in increased regional and local transportation investments that serve RSIA's. The scheduled 2005-06 update to the RTP should also consider amendments to Chapter 1 policies that govern investment priorities for RSIA's.

**2004 Regional  
Transportation Plan**

**Public  
Hearing  
Summary**

### Excerpt from December 4, 2003 Metro Council Public Hearing

6.3 **Ordinance No. 03-1024**, For the Purpose of Adopting the 2004 Regional Transportation Plan as the Regional Transportation System Plan and the Regional Functional Plan for Transportation to Meet State Planning Requirements.

6.4 **Resolution No. 03-3380**, For the Purpose of Adopting the 2004 Regional Transportation Plan as the Federal Metropolitan Transportation to meet Federal Planning Requirements.

6.5 **Resolution No. 03-3381**, For the Purpose of Adopting the 2004-07 Metropolitan Transportation Improvement Program.

6.6 **Resolution No. 03-3382**, For the Purpose of Adopting the Portland Area Air Quality Conformity Determination for the 2004 Regional Transportation Plan and 2004-07 Metropolitan Transportation Improvement Program.

Motion:	Councilor Park moved to adopt Ordinance No. 03-1024, Resolution Nos. 03-3380, 03-3381 and 03-3382.
Seconded:	Councilor Burkholder seconded the motion

Councilor Park said there had been a variety of issues that had arisen dealing with our local partners. Mr. Cotugno would explain what we were attempting to do and with concurrence of both the Council and Joint Policy Advisory Committee on Transportation bifurcating the process of the federal and state Regional Transportation Plan (RTP) update.

Andy Cotugno, Planning Director, introduced the four pieces of legislation and showed the relationships between the four. The RTP was adopted and acknowledged by the State Transportation Commission and the State Land Conservation and Development Commission and the Federal Government based upon an August 2000 adoption. The State and Federal governments have different update cycles requirements. The Federal Government has a three-year update requirement and the State has a five-year update requirement. Metro started down the path of doing this update trying to keep the State and Federal Update as a single document. Metro was now proposing to delay the State RTP adoption and stay within their window of five years, which would be August of 2005. Metro can't delay the Federal RTP. They have a three-year window. Their three-year window expires from their approval date of January 26, 2004. Metro had no choice but to do a federal update. Metro had hoped to keep these together to keep the confusion factor down but he was now recommending that we not proceed with the State RTP and therefore, he was proposing that Ordinance No. 03-1024 be withdrawn. The reason for this came up at Transportation Policy Advisory Committee (TPAC). TPAC recommended that we not proceed with the State RTP adoption because the State RTP requirements have a more substantive requirement than the Federal RTP requirement does, that is; Metro was extending our plan out to 2025 from 2020. That extra five years needs a good thorough analysis to determine whether or not that system meets the transportation demands and if there were shortfalls to come up with improvements to address those shortfalls. Metro had not done this, what had been done with this RTP was incorporated projects that had gone through some kind of planning process whether it was Metro's Powell Foster planning process or local comprehensive plan planning process which they were now completing in response to our last RTP. Metro was incorporating all of those changes. Metro was not trying to use this to go through a major reevaluation process. They were trying to use this to incorporate things that have been done in the past several years. For federal purposes it was necessary that we include those in the plan and most importantly it was necessary that we demonstrate that they conform to the air quality requirements. There was a

companion resolution, Resolution No. 03-3382, that was the air quality conformity resolution. Metro was proposing that that resolution be continued to next month. The conformity was not done. The work to estimate vehicle emissions was still underway. That will require that the public comment period for that conformity be extended until those results can be published and released and be made available for public comment. That public comment period has been extended until January 8, 2004. The action that they were proposing to proceed with was with Resolution Nos. 03-3380 and 03-3381. The Metropolitan Transportation Improvement Plan (MTIP) was the four-year programming of transportation dollars. The policy action Council had already taken in June 2003 was the allocation of a portion of the MTIP that Metro directly controls through Council action. This MTIP incorporates that policy action but as needed provides the greater detail as to which year, which project fall in, which phase, which source of funds. More importantly, it adds in the Oregon Department of Transportation (ODOT) funded projects and the TriMet funded projects to provide a complete federal picture of the federally funded projects. The MTIP was up for adoption. The federal RTP was up for adoption. They were proposing to withdraw the ordinance for the State RTP and the air quality conformity would be continued until next month. They had received 126 comments to date on the publication package. Tonight was the close of the public hearing. Tomorrow, they would have a comment and response document to follow the comments that have been received to date that they had been compiling and preparing responses for so that when Council was dealing with the action item Council would have a comment and response recommendation on all of the comments including the hearing comments from tonight's public hearing.

Council President Bragdon opened a public hearing on Ordinance No. 03-1024, Resolution Nos. 03-3380, 3381 and 3382. He noted a card from Mayor Eugene Grant, Happy Valley, who had left but submitted a letter.

Dr. Pamela Settlegood, SW Hills Residential Hogue, 4224 SW Melville Portland OR 97239 read her letter into the record (a copy of which may be found in the meeting record). Councilor Park said he didn't think we had money invested in the Tram project. He believed it was strictly City of Portland. He wasn't sure about the Sunset Hwy project. He asked Mr. Cotugno to address what was being proposed by individual jurisdictions and Metro's role and responsibility in that versus what was being perceived. Mr. Cotugno said the federal RTP, the most important component under the federal requirements, was to define what was called the fiscally constrained RTP. That was, what was the total system we can reasonably expect to build out there given all reasonably available funding sources. The monies that Metro allocate was part of that source of funds but a much bigger part were all of the other sources that were raised at the State and local level. We have made assumptions based upon past history how much ODOT money comes into the region and was available to be spent and in this case how much Portland system development charge revenues were paid, how much Portland urban renewal funds go toward transportation projects and in a similar fashion, Washington County MSTIP levy goes into transportation projects. Given all of those other sources around the region, what were the projects that we could expect to be built? Metro doesn't specially have Metro money, the federal funds that we allocate here in the TRAM but Portland does. Therefore, it was part of the overall system that we had identified for this RTP. We do have 10 million dollar of MTIP into the North Macadam infrastructure requirements. Metro had not pinned down yet which infrastructure that \$10 million was going towards, whether it was the streets, the streetcar or the TRAM. Metro had committed it to the overall North Macadam area. To date Portland has indicated that they were likely to request that those be assigned to the streets in the area not the TRAM or the streetcar. That has not been formally concluded yet.

Lenny Anderson, Coalition for a Livable Future/Transit Demand Management (TDM) Subcommittee, 2934 NE 27<sup>th</sup> Ave Portland OR 97212 expressed the fact that the process had precluded public involvement that they had come to expect from Metro and had been rushed. He was involved more and more as a member of the TPAC subcommittee for TDM. He was presenting a letter for the Coalition for a Livable Future (a copy of which may be found in the meeting record).

Councilor Newman asked if there was a specific project or a list of projects that he objected to in this update or was it just the percentages that were flowing to particular modes? Mr. Anderson responded that he couldn't identify a specific project. There seemed to be a slippage based on deferring to jurisdictions to simply include the ones that they have done. When you add all of those in and look at the resources available, we were spending more money on roads and less on transit. Some of that may be coincidental but that was not the direction we needed to go.

Councilor Burkholder said he agreed with Mr. Anderson. What this document reflects was the fact that on the State level there had been new money allocated specifically for highways and bridges and so this document includes that. The other part was a couple of major transit projects; the Airport Max and the Interstate Max were completed. Mr. Anderson still raised the issue up of where were the resources to complete our alternatives to the automobile facilities. There weren't new resources coming from the legislature. They were looking into new resources locally. This document reflects the current funding realities that we were facing. Mr. Anderson added that he thought that was instructive. It was a little disconcerting. Councilor Burkholder concurred.

Don Baack asked for clarification. Since they had received a lot of stuff just today and hadn't been able to put their thoughts down on paper, would the record be open to submit response after today? Council President Bragdon said he thought the record was closed as of today. Mr. Cotugno said the record was advertised as closing today but they had requested the record be extended on the air quality conformity Resolution No. 03-3382 until January 8, 2004. They were proposing to withdraw the ordinance. There will be a whole development process for a new RTP and it will have its own public comment period when the time comes. Council President Bragdon asked Mr. Baack if he was addressing the air quality issue? Mr. Baack said he did not know. He thought there were projects that were in the wrong years. They had only got the information that was being proposed today. Councilor Burkholder said one of the issues was that just yesterday Metro staff received a series of amendments for a project list from the City of Portland. Many of the projects were in this particular area. Had that been available for public comment? The answer was no. He thought by Metro accepting that list it behooved Metro to add some more time to allow people to make comments on the complete document. Those projects hadn't been available for public comment. Councilor Park asked for clarification on continuing the record and staying on track for what needed to be done in order to stay with the federal compliance. Council President Bragdon asked if we could extend the public comment period for two weeks. Councilor Park said they would hit the deadline on January 23, 2004. Mr. Cotugno said he didn't see a problem with extending the deadline until next Wednesday. He picked that date because JPACT was next Thursday. They had hoped to close the comment period today because TPAC was tomorrow. TPAC can make provisional recommendations. Council President Bragdon said the record would be extended until December 10<sup>th</sup>.

Don Baack, Hillsdale Neighborhood Association, 6495 SW Burlingame Place Portland OR 97239 read his letter into the record. Councilor Newman reiterated his concerns about connections to I-405. He noted that there was a lot of traffic going from southeast Portland but also through Clackamas County that went through Mr. Baack's neighborhood and were forced to go over the Taylors Ferry Tewilliger route to get to Washington County. The connection between the Ross Island Bridge and I-405 particularly in the Arthur-Carruthers section was so backed up. He

remembered the South Portland circulation plan that dealt with the redesign of Naito Parkway actually had fly over ramps that connected Ross Island Bridge and North Macadam to 405. Mr. Baack said he was on that committee and it was the major thing that most of the committee could agree on. The rest of it was much less important. Councilor Newman said the issue of funding it was a big mystery. He supported Mr. Baack's contention that it was a huge problem that was not just local but regional. His testimony was submitted by email (a copy of which is included in the meeting record).

Glenn Bridger, Southwest Neighborhoods Inc, a coalition of 16 neighborhoods in southwest, 940 SW Vincent Pkwy Portland OR 97219 said southwest Portland was hurting in terms of transportation infrastructure. He summarized his testimony (a copy of his letter is included in the meeting record)

Morgan Will, 3817 N Williams Ave Portland OR 97227. He said he was a resident of the Boise Neighborhood in north Portland. He was here to comment on the I-84 Trail. It was regional trail #37. He wanted to advocate for its inclusion on the constrained funding list. He spoke to the benefits of the trail for the region. The trail goes from the river to I-205. It was also suggested to go beyond to connect to a leg by 122<sup>nd</sup>. This trail would connect the downtown, the Rose Quarter, the Lloyd District, Hollywood District, 82<sup>nd</sup> Avenue, and Gateway. This was a regional trail that would help meet many of the goals of the 2040 Growth Concept. There were about 14 neighborhoods on the inner eastside of Portland that will be connected by this trail. Within a quarter mile of its route there were about 15 parks and 23 schools and playgrounds. The trail would link up to all Max stations that go through that corridor starting at the Rose Quarter Transit Center ending at the Gateway Transit Center. It would make easy bicycle connections to about 22 bus lines. There were about 16 city bikeways that cross or are next to the corridor that would help link users of the bike network to regional trails and regional resources such as the I-205 trail and eastside esplanade, OMSI to Springwater. People will be able to walk along the trail from their neighborhoods to services. He had walked the whole length of the route several times. He had counted about 50 access points. It would be an easily accessible trail for residents. There were also 17 bridged where people could get from the south side of the Banfield Corridor over to get to the trail. He had been advocating for this trail. A lot of people were excited about the trail. He was a Portland State University student studying urban and regional planning. He had been doing some research about the potential for this trail. He had done a mock grant application for it. He felt this project would help access in the region. He was working with a professor of Transportation Engineering at PSU in cooperation with some city planners and Metro trail planners to have a Senior Engineering Capstone course to have a look at this trail from an engineering standpoint. They should be getting some output from that course at the end of the winter term. It was good time to make it fundable. There were some requests for some feasible study. He encouraged that this be approved. Council President Bragdon asked if this trail wasn't in the RTP. Councilor Monroe had made a motion to include this in the RTP. Mr. Will explained that this was about two years ago. The trail was put on the RTP as a proposed trail but the idea now was that it moved into the financially constrained list, which makes it available to get funding toward it. It makes it more of a priority for funding as funding arises. It needed to have a feasibility study. Councilor Newman asked where it had to be in the RTP to get any kind of funding?

David Redlich, Homestead Neighborhood Association, 3444 SW Condor Ave Portland OR 97239 expressed concern about how the meeting was run. He felt they needed to find a better way for public hearings. He felt public participation was being stymied. He opposed the Urban Growth Boundary expansion. If they needed industrial land, they should use the existing paved parking lots in the region. He suggested micro business orientations for industrial land. He supported

comments made by Glenn Bridger. He said the OHSU solution needed to be a regional solution. He commented on the extension of public hearing to December 10<sup>th</sup>. He said the City of Portland had submitted documents late so that there was little time to comment on them. He recommended Metro send a clear signal that this Council supported public comment.

Jay Mower, Columbia Slough Watershed Council, 7040 NE 4<sup>7th</sup> Ave, Portland OR 97218 read his letter into the record (a copy of which may be found in the meeting record).

Council President Bragdon closed the public hearing.

Councilor Newman asked the Mr. Cotugno respond to his question about trail funding. Mr. Cotugno explained that any federal funds that get allocated have to be consistent with a adopted fiscally constrained air quality conformed RTP. If you desire to allocate money to a project through the next MTIP round, then it would have to be part of this fiscally constrained air quality conformed RTP or get added to the fiscally constrained air quality conformed RTP. We have done amendments as part of the MTIP adoption in the past. The biggest hurdle was the air quality conformity because of the expense. A highway capacity expansion project would require new emission estimates to determine their air quality conformity. Trail and transit projects were all exempt projects so you wouldn't need to do the air quality conformity. You do need to take formal action to amend the RTP. Councilor Newman said the trail that was brought up was something that was added to the RTP but not the financially constrained RTP? Mr. Cotugno said yes. Councilor Burkholder asked what the process was to add a feasibility study for a trail to a fiscally constrained list. How would that happen in the next two weeks or in time for this update? Mr. Cotugno said the feasibility study wasn't the issue. The real issue was the financial caps. Kim Ellis responded that a feasibility study would be about \$50,000. She said staff was recommending adding some of the trails to the financially constrained system. We have been compiling a list of all of the comments received, developing staff recommendations, which would be forwarded to TPAC, JPACT and the Metro Council for approval. Councilor Newman asked if the project related to Milwaukie, Oak Grove and Lake Oswego was recommended for the financially constrained list? Ms. Ellis said the request was added to the project list so it had been added to the preferred system. It was not recommended for inclusion in the financially constrained system. Councilor Park commented on testimony on Title 4 and RTP.

## 2004 Regional Transportation Plan

Re: Regional Transportation Plan Update response

Dear Metro:

Please stop wasting taxpayer money on so-called "light rail" and "commuter rail" white elephants.

Per million dollars spent, freeway improvements will produce more new transportation capacity, including trucks, than mass transit.

Mass transit "True Believers" continuously overstate ridership and understate capital and operating costs. The Beaverton-Wilsonville "commuter rail" project from nowhere to nowhere, originally was estimated to cost about \$70 million; the latest estimate is \$120 million-plus.

My understanding is that the Highway 217 task force is considering a so-called "high occupancy lane." That deprives motorists of the use of traffic lanes they have financed, does little to reduce congestion, and increases congestion.

My further understanding is that Metro intends to issue revenue bonds totaling \$15 million as its "share" of the Beaverton-Wilsonville commuter rail project.

Subject to legal research my preliminary view is that revenue bonds must be repaid from the project the revenue bonds finance.

I will attend the Thursday, December 4, 2003 meeting starting at 2 p.m. Parenthetically, most people work at that time. I suggest that at least one public hearing start at 7 p.m.

Sincerely,

Henry Kane  
C: Metro Counsel D. B. Cooper

## MEMORANDUM

### CITY OF TIGARD

---

TO: Kim Ellis/Tom Kloster, Metro

FROM: Gus Duenas, City of Tigard

DATE: October 31, 2003

SUBJECT: RTP updates – financially constrained system

In a previous memo, Tigard provided you with our recommended updates to the RTP, including several projects to be added to the financially constrained system. Since that time, it has become evident that limited funding will not allow for all of the requested projects to be placed on the financially constrained system.

After discussing this issue internally, and with the understanding that Metro plans to conduct a more rigorous and detailed update to the RTP next year, Tigard is changing the recommendation that both the Washington Square Regional Center over-crossings be added to the financially constrained system at this time. It is our intent to request that both of these regionally significant projects be added to the financially constrained system during the next RTP update.

The following is a summary of Tigard's updated request:

#### **Projects to be added to the RTP:**

The following projects are identified in the Tigard Transportation System Plan, serve a regional center or town center, and serve a regional need and Tigard requests that these be included in the RTP update.

**Add the Washington Square Regional Center Greenbelt Trail to the Regional Bicycle System Map and include the project in the funding systems.**

Explanation: The portion from Hall to Greenburg received funding on this past MTIP allocation for design and the portion from Hall to 217 also received funding for construction. Funding will be requested in the future to complete construction of the portion between 217 and Greenburg and to complete remaining segments. Estimated cost for filling in trail gaps is approximately

\$2 million (from Washington Square Implementation Plan). Tigard requests that this be added to the financially constrained system.

**Walnut Street extension east of 99W to meet Hall Blvd. and Hunziker.**

Explanation: The Tigard TSP identifies a connection of Walnut east of 99W to meet Hall Boulevard and Hunziker Street. The estimated cost is \$19 million. This would serve the Tigard Town Center area.

**Projects to be added to Financially Constrained System**

The following projects are not currently on the financially constrained system and Tigard is requesting that they be added:

**(no RTP project #) Washington Square Regional Center Greenbelt Trail**

Explanation: The portion from Hall to Greenburg received funding on this past MTIP allocation for design and the portion from Hall to 217 also received funding for construction. Funding will be requested in the future to complete construction of the portion between 217 and Greenburg and to complete remaining segments. Estimated cost for filling in trail gaps is approximately \$2 million (From Washington Square Implementation Plan).

**RTP project # 6011 – Hwy 217 over-crossing - South Mall to Nimbus Connection (Nimbus to Locust Street).**

Explanation: This project is identified as the 3<sup>rd</sup> priority in the Washington Square Regional Center Plan and is entirely within Tigard's jurisdiction. Given recent development proposals in this area, it may be more important to construct this project than other higher priority projects if additional funding is made available. In addition, a connection in this area will also complement the commuter rail project by providing better east/west connections to the Regional Center area. The transportation improvements within the Regional Center will ease existing congestion on State facilities (Hwy 217 and Hall Blvd). Estimated cost for construction (design to construction) is \$26 million.

**Projects Critical to remain on the Financially Constrained System**

In addition, Tigard supports the following projects being maintained on the financially constrained system:

- RTP project #6009 – Highway 217 Corridor Study
- RTP project #6014 – Greenburg Rd improvements
- RTP project #6015 – Greenburg Rd improvements, North
- RTP project #6016 – Greenburg Rd improvements, South
- RTP project #6034 – Walnut Street Improvements, Phase 3
- RTP project #6040 – 72<sup>nd</sup> Avenue Improvements, 99W to Hunziker Rd
- RTP project #6041 – 72<sup>nd</sup> Avenue Improvements, Hunziker Rd to Bonita rd
- RTP project #6042 – 72<sup>nd</sup> Avenue Improvements, Bonita Rd to Durham Rd

## **Projects to be removed from the Financially Constrained System**

A few projects in Tigard on the Financially Constrained system have been constructed and can be removed from the Financially Constrained system:

RTP project #6033 – Walnut Street Improvements, Phase I  
Reason - Completed (\$2,021,250 estimated project cost)

RTP project # 6046 – Walnut Street Improvements, Phase II  
Reason – Completed (\$6,601,356 estimated project cost)

## **Project clarifications for RTP**

Tigard has identified several clarification issues that need to be addressed in the RTP update. Below is a description of the issues with the necessary clarifications underlined.

**RTP project # 6011** is listed on the RTP project list, however it is not identified on the RTP map or in the text of the RTP. Also, this project should be a Tigard jurisdiction as well as ODOT. This is the South Mall to Nimbus Connection identified in the Regional Center Plan. The Washington Square Implementation Plan identifies this project cost at approximately \$26 million.

**RTP project # 6032** is listed on the RTP project list, however it is not identified on the RTP map or in the text of the RTP. The project description in Tigard's TSP states: "Realign Hunziker Road to meet Hampton at 72<sup>nd</sup> Avenue – requires overcrossing over ORE 217 - removes existing 72<sup>nd</sup>/Hunziker intersection." The TSP estimates the cost for this improvement at \$10 million.

**RTP project #6052** should have both Tigard and Beaverton under the jurisdiction as it enters both Cities. The project location is Nimbus Drive to Northern Mall area. The Washington Square Implementation Plan identifies this project cost at approximately \$30 million.

**RTP project #6053** – the Washington Square Implementation Plan identifies this project cost at approximately \$38 million.

A few **discrepancies** were noted between the RTP and TSP in the functional classification: Beef Bend, Gaarde and Walnut from Gaarde to Scholls are arterials in the TSP but listed as a collectors in the RTP. When Tigard adopted the TSP, it was acknowledged that these discrepancies exist.

Thank you for considering Tigard's comments in the RTP update process. We look forward to reviewing and commenting on the draft documents.

CC: Clark Barry, Washington County  
Jim Hendryx, City of Tigard  
Barbara Shields, City of Tigard

Kim -- sorry for the late submittal. I have reviewed the Metro and ODOT RTP project lists, and identified apparent differences. Some assorted discrepancies between ODOT and Metro Financially-Constrained (FC) lists. Some adjustments to projects proposed by City of Portland (CoP) for ODOT's list. See attached spreadsheet of ODOT projects in RTP FC list, and Expanded Financially-Constrained list. Items in spreadsheet highlighted in yellow indicate new cost estimates, or projects split into two projects; items highlighted in green indicate projects have been proposed for another category than earlier drafts, and/or are in different category than RTP assignment; items highlighted in red (Glencoe Interchange project phases) are proposed for FC and Expanded FC categories, since within Metro AQ boundary, but not Metro Planning boundary. More specific information on selected projects are explained below. If you have any questions, give me a call @ 731-8230.

**MEMORANDUM**

To: Tom Kloster, Metro  
From: Deena Platman, Transportation Planning  
CC: Laurel Wentworth, John Gillam  
Subject: Comments on draft 2004 Regional Transportation Plan (RTP) Update Documents

I have taken the opportunity to review the four update documents that comprise the 2004 RTP update and have the following comments:

**1 - Policy Update**

- The street design section has N Ivanhoe (Richmond to Philadelphia) updated to Community Street. This item should be removed from the list because the existing classification is Community Street.
- McLoughlin Blvd - Urban Road termini should change from SE 17<sup>th</sup> - City limits to Woodward - 17<sup>th</sup>.
- N Richmond (Lombard to Ivanhoe) should remain a Community Street.
- NE Sandy's termini for the Regional Street classification should change from 12<sup>th</sup> - 47<sup>th</sup> to 54<sup>th</sup> - 57<sup>th</sup>. The street design classification should change from Regional Blvd to Regional Street.
- NE Sandy's Regional Blvd classification termini should change from 47<sup>th</sup> - 82<sup>nd</sup> to 57<sup>th</sup> - 82<sup>nd</sup>.
- Sandy Blvd (98<sup>th</sup> - 122<sup>nd</sup>) is classified as a Regional Blvd in the 2000 RTP not a Community Blvd.
- SE 17<sup>th</sup> termini for Community Blvd should change from Tacoma - Andover to Tacoma - Linn.
- NE/SE 39<sup>th</sup> termini for the Regional Street classification should change from Broadway - Powell to Broadway - Holgate.
- SE 39<sup>th</sup> termini for Community Street should change from Powell - Woodstock to Holgate - Woodstock.

**2 - Project Update**

- Update the project names for the streetcar projects as follows:
  - #1015 - Portland Streetcar - Phase 3a (RiverPlace)
  - #1086 - Portland Streetcar - Phase 3b (Gibbs)
  - #1087 - Portland Streetcar - Phase 3c (Bancroft)
  - #1106 - Portland Streetcar - Eastside, Phase 1 (Lloyd District)
  - #1107 - Portland Streetcar - Eastside, Phase 2 (CEID)

- #1199 - Barbur Blvd Pedestrian Access to Transit Improvements should be moved to the Preferred System. The I-5/Barbur Corridor Study will precede improvements in this corridor.
- #2016 – NE Halsey Bikeway should be moved to the Preferred System. Due to right-of-way constraints, the project needs additional study to determine feasibility. The Tillamook Bike Boulevard provides an alternative route through this section of northeast Portland.
- #4015 – US-30 Bypass Improvements Study should be combined with #4037. Delete #4015.
- #4030 – NE 11-13<sup>th</sup> Avenue Connector should be combined with #4037. Delete #4030.
- #4037 – Columbia and Lombard Intersection Improvements should be updated as follows:

Name: Lombard – Columbia Connection near MLK Jr Blvd.

Description: Improve road connection between Columbia Blvd and Lombard in the vicinity of MLK Jr Blvd to 11<sup>th</sup>/13<sup>th</sup>, to facilitate freight movement.

Est. Cost: \$16, 835,000

Jurisdiction: Portland/Port

RTP Program Years: 2004 – 2009

### **3 – Technical Update**

No changes

### **4 – Air Quality Conformity**

No changes

Nov. 20, 2003

To: Kim Ellis, Metro  
From: Clark Berry *CB*  
Subject: **Revisions to RTP Project List**

Attached are suggested changes to the RTP Project List (10/31/03 Public Comment Draft). Changes are grouped into one of three categories consisting of Project Description Revisions, Project Additions and Project Deletions. Many of the proposed changes are requested to maintain consistency between this RTP update and the Washington County Transportation Plan adopted in Oct. 2002.

Project Description Revisions

- #1185 – Change program years to 2004-09 to reflect scheduled project completion under MSTIP3 in 2004/05.
- #3011 – Change project description to read Cornell to 185<sup>th</sup> to be consistent with #3009.
- #3036 – Change cost estimate to \$12.7 million to be consistent with County Transportation Plan.
- #3066 and #3067 - Change 2040 link from Beaverton Corridor to Bethany TC.
- #3069 – Change location to Allen to Beaverton-Hillsdale Hwy. and cost estimate to \$13.3 million to be consistent with County Transportation Plan.
- #3099 – Change jurisdiction to Washington County because road is planned to remain part of Countywide Road System (i.e., is and will be under County's roadway jurisdiction) and change cost estimate to \$14.8 million to be consistent with County Transportation Plan.
- #3103 – Change project location to 185<sup>th</sup> to Brookwood and cost estimate to \$34.8 million to be consistent with County Transportation Plan.
- #3115 – Change jurisdiction to Wash. Co. to reflect current roadway jurisdictional responsibility.
- #3133 – Change project description to read "Construct eastbound on-ramp, westbound off-ramp and southbound auxiliary lane" to reflect anticipated improvements already funded under OTIA.
- #3137 – Change cost estimate to \$12.5 million to reflect County Transportation Plan.
- #3142 – Change project location to read "170<sup>th</sup> to Cornelius Pass" with an estimated cost of \$21 million and program year of 2010-15.

#3149 – Change project description to read “Relocate westbound on-ramp to construct westbound to southbound loop ramp and widen overcrossing to accommodate additional southbound through-lane”.

#3174 – Change project location to “Leahy to 84<sup>th</sup> Ave.” and project description to “widen to 5 lanes...” to be consistent with County Transportation Plan.

#3176 – Change project name to 95<sup>th</sup> Avenue Extension.

#3180 – Change project description to read “Construct new collector with sidewalks and bike lanes”

#3186 – Change project location to read “Hwy. 26 to Cornell” to be consistent with new proposed MSTIP project.

#3188 – Change project location to read “Cornell to Laidlaw” to be consistent with new proposed MSTIP project.

#3199 – For consistency with County Transportation Plan, change project location to read “143<sup>rd</sup> Avenue to future Springville Extension” and change cost estimate to \$21.3 million.

#3202 – For consistency with County Transportation Plan, change project location to read “Future Springville Extension to Cornelius Pass” and include cost estimate of \$12.4 million.

#3209 – Change 2040 link from Tanasbourne TC to Bethany TC.

#3214 – Delete phrase “complete boulevard design improvements” from project description because project is not designated for boulevard design considerations in County Transportation Plan.

#3215 – Change cost estimate to \$15.4 million to be consistent with County Transportation Plan.

#6030 – Change cost estimate to \$41.6 million to be consistent with County Transportation Plan.

#6043 – Change cost estimate to \$8.2 million to be consistent with County Transportation Plan.

### Project Additions

New project – Add to Preferred System the widening of 209<sup>th</sup> from Kinnaman to Farmington Rd. @ \$21 million in the 2010-2015 time period.

New project – Add to Preferred System the widening of 173<sup>rd</sup> from Bronson to Meadowgrass to 3 lanes with bikelanes and sidewalks @ \$13.9 million in the 2016-25

time period. This project is the continuation of RTP project #3205 the 173<sup>rd</sup>/174<sup>th</sup> undercrossing of Hwy. 26. This route is also designated as an arterial road in both the 2000 RTP and the County's Transportation Plan.

New project – Add to Preferred System the widening of Springville Rd. from 185<sup>th</sup> to PCC access to 5 lanes @ \$3.8 million in the 2010-15 time period.

New project – Add to Preferred System the widening of Springville Rd. from PCC access to Kaiser Rd. to 3 lanes @ \$9.6 million in the 2016-25 time period.

New project – Add to Preferred System the widening of Laidlaw Rd. from West Union to Kaiser to 3 lanes @ \$11 million in the 2010-15 time period.

New project – Add to Preferred System the widening of Kaiser Rd. from Bethany Blvd. to Cornell Rd. to 3 lanes @ \$18.6 million in the 2010-15 time period.

New project – Add to Preferred System the widening of Kaiser Rd. from Springville to Bethany Blvd. to 5 lanes @ \$4.6 million in the 2016-25 time period.

New project – Add to Preferred System the widening of Jenkins Rd. from Murray to 185<sup>th</sup> to five lanes @ \$7.3 million in the 2010-15 time period (this may already be on the list but I couldn't find it).

New project – Add to Preferred System the widening of 197<sup>th</sup>/198<sup>th</sup> from TV Hwy. to Baseline to 3 lanes @\$13.9 million in the 2016-25 time period. This is identified as a collector of regional significance in the 2000 RTP and is included in the County's Transportation Plan project list.

New project – Add to Preferred System "Cornelius Pass Interchange Improvement @ Hwy. 26 to add northbound to westbound loop ramp". Estimated cost is \$30 million and program year is 2016-25.

New project – To be consistent with County Transportation Plan, add to Preferred System "Widen Barnes Rd. from Leahy to County Line to 3 lanes for \$7.5 million in 2016-25 time period".

### Project Deletions

#3024 – Delete project on Hwy. 26 from Cornell to 185<sup>th</sup> which duplicates revised #3011.

#3043 – Delete seven-lane project on Walker Rd. from Cedar Hills to Murray because need shown in Wash. Co. Transportation Plan is only five lanes.

If you have questions or if any of these proposed changes conflict with other proposed changes you have received from Washington County jurisdictions, please call me at 503 846-3876 so we can reconcile the conflict before revising the RTP. Thanks.

**Subject: RTP update problem**

**Date:** Monday, November 17, 2003 1:44 PM

**From:** Platman, Deena <Deena.Platman@pdxtrans.org>

**To:** "Kim Ellis (E-mail)" ellisk@metro.dst.or.us

**Cc:** "Gillam, John" John.Gillam@pdxtrans.org

Hey Kim,

I'm yet again looking at the update list and I found a problem. #1106 is now the Eastside Streetcar Phase 1 but we still need the original Eastside Streetcar Feasibility Study that this project replaced. This study is actually separate from the Portland Streetcar, Eastside project. The idea is to look at extending the streetcar into neighborhoods outside of Central City.

Can you add this back in as a new # and put it into the preferred system?

**MEMORANDUM**

TO: Kim Ellis, Senior Transportation Planner, Metro  
FROM: John Wiebke, Urban Planner

RE: **2004 Regional Transportation Plan Update**

Upon review of the latest 2004 RTP Update draft language, the City has the following comments:

1. New projects added to the preferred and financially constrained lists for Hillsboro have RTP program years out to 2016-2025. The projects in question are:
  - RTP 3099 (1<sup>st</sup> Avenue/Glencoe Road widening)
  - RTP 3118 (TV Highway/Brookwood Avenue intersection alignment)
  - RTP 3117 (Grant Street East-West connector/extension to Brookwood Pkwy)
  - RTP 3139 (US 26 over crossing at 229<sup>th</sup> Avenue)

The program years for all these projects should be moved up to 2004-2009. In particular, Project 3118 (TV Highway/Brookwood Avenue) is the City's top priority and should be programmed for 2004-2009.

2. Table 1.3 of the 2000 RTP specifies the following non-SOV modal targets for 2040 land use types:
  - 45-55% for regional/town centers, main streets, station communities, and corridors.
  - 40-45% for industrial/employment areas, intermodal facilities and inner/outer neighborhoods.

Non-SOV modal target is an outstanding issue that was never thoroughly resolved when the 2000 RTP was adopted. How do we measure jurisdiction compliance? Are the targets achievable? These and other questions are what this section is trying to address. Therefore, it would be advisable to seek clarification on this topic from Metro staff during the next TPAC meeting.

Portland, OR 97232-2736

Dear Brian:

Re: Support for Tillamook Branch Trestle Addition to RTP

We are writing in support for the concept of adding the Tillamook Branch Trestle to the RTP being considered early next month. We understand that grant funds may be available and see this as a potentially important project. We also understand that the 4C Technical Advisory Committee has also expressed support.

The concept of an east/west connector and pedestrian path has great appeal and could be another step in better connecting our County that sometimes feels divided by the Willamette River. We see the potential of future pedestrian, bike and multi-uses that could join with other trail systems and networks being developed. An additional benefit is preserving the trestle as a possible commuter rail alignment in the future, another means of connecting our County. And, we also like the idea of preserving the trestle, an old, established Clackamas County landmark that links two of our important cities.

Please consider this project as you move the RTP forward.

Sincerely,

Bill Kennemer  
Chair

RE: RTP Update Public Comments

Dear Ms. Ellis:

The City of Wilsonville has several preliminary comments regarding the draft 2004 RTP Update. They are as follows:

1. As submitted at the October 29, 2003 TPAC Workshop, the City of Wilsonville has re-evaluated two project priorities since the last update of the financially constrained list and they would include the following changes to the draft 2004 RTP:
  - Remove project #6091, the Boeckman Road I-5 Overcrossing, from the financially constrained list and move it to the preferred system. The project total in the draft RTP is \$9,890,000.
  - Add project #6093, the Barber Street extension to the financially constrained list. The project total in the draft RTP is \$7,310,000.

As you can see, this would remove a burden of over 2.5 million dollars from the financially constrained system. The Barber Street Extension project was determined to be a higher priority project because of its ability to have a greater impact on providing relief to the Wilsonville Road Interchange. This was concluded as part of the *I-5/Wilsonville Freeway Access Study*, which was prepared by DKS Associates in November of 2002 in coordination with ODOT, Metro, and the City of Wilsonville.

2. Appendix 4 – Transportation Analysis Zone Assumptions, does not list Wilsonville as an Industrial Area (pg. 3) under 2040 Grouping. I suggest that we be included as a Tier 1 or, at least, as a Tier 2.
3. The City is currently reviewing the proposed Policy Map Amendments for compliance with the City of Wilsonville Transportation Systems Plan. If there are any modifications needed, we will forward these to you before December 4, 2003.

Thank you for the opportunity to provide these preliminary comments on the draft 2004 RTP Update. If you have any questions, please call me at (503) 682-4960.

Sincerely,

From: Andy Back, Washington County

**Re: Recommendations on the 2004 Regional transportation plan**

Below are our comments on the draft 2004 RTP. While we are supportive of going forward with adopting an RTP that meets federal regulations, we do not believe adopting an RTP that is adopted by ordinance and attempts to meet the Oregon Transportation Planning Rule is necessary. Simply, we believe it would be irresponsible for TPAC to recommend adoption of a "state" RTP given the level of effort that has gone into this planning exercise. There is no compelling reason to do this now. Instead, we urge that TPAC recommend the following to JPACT:

- 1. Proceed with adoption of the federal RTP*
- 2. At this time, do not adopt a revised RTP that attempts to meet the Transportation Planning Rule and other state land use requirements.*
- 3. Direct Metro staff to establish a work program for undertaking a comprehensive update of the RTP. The initial task in this effort would be the development of a coordinated, thoroughly reviewed 2025 forecast.*

The Washington County Coordinating Committee – Transportation Advisory Committee met and discussed this issue at their November 21, 2003 meeting. The WCCC-TAC agrees in principal with these recommendations. To date, we have not unearthed any fatal flaw to this approach. However, both the County and the WCCC-TAC hope that this approach continues to be looked at prior to formal adoption.

**Reasons for our recommendation**

Metro staff has described this effort as a "minor" update. We believe "minor" is a very subjective term. The plan is based on a new 2025 population and employment forecast, which, to date, has had absolutely no review by Washington County, and, to our knowledge, any other local governments in the Metro area. The forecast is essential in driving the development of the rest of the plan. We have no way to determine whether

or not this Forecast reasonably reflects the amount and location of future growth, and in turn, no way to determine whether or not the expected travel demand on the assumed transportation system is reasonable. To use an old, but appropriate analogy, adopting a new state RTP is like building a house without any knowledge of the quality of the foundation. This new 2025 forecast is a quantifiable vision of what the region looks like 20 years from now. Yet, the vision remains hidden and unreviewed. While it may be a good first draft, it's certainly unrealistic to assume that it will be endorsed, much less embraced, as a "shared vision" without months of rigorous review by local governments. Moreover, Statewide Planning Goal 2 requires an adequate factual base in order to make land use decisions. In this case, we don't believe an adequate factual base has been established.

The primary benefit, to local governments, in adopting a "state" RTP at this time is for simplicity sake. It is easy to explain to the public and others that there is just one single Regional Transportation Plan, and that it meets both Federal and State requirements. But, as we all know, transportation planning and funding is complex and is not simple. While having two Regional Transportation Plans may marginally add to the complexity, at this time, the benefits of one single Regional Transportation Plan simply don't outweigh the costs and problems that adopting a new state RTP may create.

Our concerns are primarily a result of reviewing the "Technical Update" dated October 31, 2003 (document #3 of 4). Our concerns include, but aren't limited to:

Page 6-5 660.012.00206-5 – Here is the beginning discussion about how the TSP adequately serves regional transportation needs. First off, because we haven't been part of a rigorous forecast or modeling development exercise, we have no idea what needs we are talking about in 2025. We have not seen any modeling results to understand whether or not the RTP adequately addresses those needs.

Page 6-5 660.012.0025 – It's stated here that this is the first regional RTP. While we hope that a new one isn't adopted, wouldn't this be the second?

Page 6-6 660.012.0030 – Determination of transportation needs. There is no evidence that this RTP followed these requirements.

Page 6-6 660.012.0035 – Define what a “minor” update is. In the bottom paragraph, it’s stated that the Preferred System is adequate to meet state and regional travel needs. To date, we have seen no data that makes this case. And, if we ultimately do see the data, it will likely be from a modeling and analysis exercise that did not involve local governments.

Page 6-6 660.012.0035(4) – So, how does this RTP address the modal targets? Are we making progress or losing ground? Is it a result of the transportation improvements in this plan, or different underlying population and employment assumptions in the individual TAZ’s? Isn’t this a future update of the RTP? So, has it adequately expanded on alternative measures?

Page 6-13, Chapter 2 – This states that local plans must be consistent with the 2025 population and employment forecasts. After several years, we finally developed and adopted an acknowledged plan that was based on the 2020 forecast. So, now what? Do we have to use the 2025 forecast for plan amendments? Do we need to use the new forecast for designing road projects? The more fundamental issue is we have no idea what is in the 2025 forecast or how it differs from the 2020 forecast.

Page 6-48, 6.7.7 Areas of Special Concern – Given the amount of congestion anticipated by the 2000 RTP, these are particular areas of the plan with which County staff has considerable concern. Simply, without a thorough analysis, it’s very difficult to say how existing areas of special concern have changed and whether there would be more areas of special concern. However, as a result of more growth and a different pattern of growth as indicated in a new 2025 forecast, there may be entirely new Areas of Special Concern where regional performance measures can not be met. We believe it’s irresponsible to go forward with a new RTP without a thorough analysis and public understanding of this issue.

If Metro does proceed with adopting a new state RTP, we believe the RTP should include those Deficiency Areas found in the County’s transportation plan that aren’t in the RTP. These additional Deficiency Areas (the County’s different, but probably more accurate term for Areas of Special Concern) include two portions of Cornell Road, Murray Boulevard from Walker to Beard, Farmington road from Hocken to 170<sup>th</sup>, Washington Square Regional Center, Beaverton Regional Center, and a corridor between Scholls Ferry and Hwy 99W. We would suspect there are other locations

outside of Washington County that don't meet the adopted performance measures.

6-58 Defining System Adequacy - We're not sure why there is a need to highlight this specific issue at this time. 660.012.0060 is clear that plan amendments need to be evaluated against planned transportation improvements. To us, that is clearly the "preferred" system. Very little land development is dependent on a plan amendment in order to proceed. Thus, we believe the larger issue is how well is the financially constrained system keeping up with actual development. It is a much, much larger issue than what the precise words of 660.012.0060 actually mean. We believe this discussion needs to be broader, and not limited to evaluating local plan amendments.

### Other issues

We are unsure, given the lack of analysis and coordination in developing the forecast, how Metro will make findings that this "new" RTP is consistent with the all of the policies in the current acknowledged State RTP. Several other parts of the RTP would need to be updated.

Here are some, but not all, of the Policies for which we believe it will be difficult to make findings:

Policy 1.0 Public Involvement – Given the "fast-track" nature of this RTP amendment process, it seems at odds with this policy. There simply isn't enough time to revise the plans based on public comment, as appropriate.

Policy 2.0 Intergovernmental Coordination – There has been very little coordination (in other words, none) regarding the forecast used to develop the new state RTP.

Policy 3.0 Urban Form – Does the new plan facilitate or hurt implementation of the 2040 Growth Concept. Has mobility and accessibility improved or decreased? Where is the data that backs up the findings?

Policy 7.0 Natural Environment – Is this effort consistent with Metro's goal 5 efforts. If so, why?

Policy 13.0 Regional Motor Vehicle System – “e” says that the plan will maintain an acceptable level of service on the regional motor vehicle system during peak and off-peak periods of demand, as defined in table. 1.2. So, where is the analysis that backs this up? Is it based on a forecast that has had sufficient intergovernmental coordination?

Policy 14.3 So how do the transit travel times measure up in this new plan? Where is the data to evaluate this Policy?

Policy 16.1 Does the bike mode share go up or down in this plan?

Policy 17.1 Does the pedestrian mode share go up or down in this plan?

Chapter 2 of the RTP – This entire 18 page chapter needs to be re-written to reflect the new forecast.

Chapter 3 – Much of this Chapter needs to be re-written to reflect the new forecast.

Chapter 4 – Will this Chapter be redone to reflect the new revenue forecasts?

Chapter 5 – Much of this Chapter needs to be re-written given the new forecast. The current RTP contains some excellent colored project maps. Is there a budget to reprint and redistribute a new RTP with new maps? We believe a broad redistribution is critical for broad acceptance, understanding and use.

## **Conclusion**

We applaud Metro staff’s efforts to pull together a financially constrained RTP that meets federal requirements. Given the timelines, we appreciate all of the hard work that has gone into this effort. However, at this time, we see no good reason to adopt (and a vast array of reasons not to adopt) an RTP update that attempts to meet the Transportation Planning Rule and other State requirements.

Instead, we urge that TPAC recommend the following to JPACT:

- *Proceed with adoption of the federal RTP*

- *At this time, do not adopt a revised RTP that attempts to meet the Transportation Planning Rule and other state land use requirements.*
- *Direct Metro staff to establish a work program for undertaking a comprehensive update of the RTP. The initial task in this effort would be the development of a coordinated, thoroughly reviewed 2025 forecast.*

Thank you again for the opportunity to comment.

Sincerely,

Andy Back  
Principal Planner

November 24, 2003

Brian Newman, Councilor  
Metro  
600 NE Grand Ave.  
Portland, OR 97232-2736

Dear Brian:

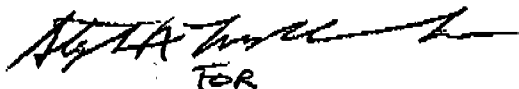

I am writing to follow up on our recent conversation about the need for a pedestrian bridge across the Willamette River near Lake Oswego. Adding facilities for bicyclists and pedestrians to the existing railroad bridge would appear to be the most efficient way of accomplishing this.

There is currently no pedestrian crossing of the Willamette between Oregon City and the Sellwood Bridge in Southeast Portland. The addition of a bridge for bicyclists and pedestrians at this location will do a great deal to improve connectivity for the entire region, and could eventually facilitate a connection all the way to the coast.

I will look forward to working with you on this proposal in the future.

If you have any questions about this, please feel free to contact me or our Community Development Director, Stephan Lashbrook.

Sincerely,

## Marilyn Matteson - RTP update public comments

---

**From:** Brad & Katrina Halverson <halverbk@att.net>  
**To:** <trans@metro.dst.or.us>  
**Date:** 11/25/2003 10:20 PM  
**Subject:** RTP update public comments  
**CC:** <halverbk@att.net>

---

Hello,

I would like to submit the following comments for the update of Metro's RTP:

-Policy update: Figure 1.17: Regional Freight System Map - I believe that N Greeley Ave between N Interstate Ave and N Going St was upgraded from a minor truck route to a major truck route during the City's last TSP update.

Project update: #1135 - Frequent Bus service for Line 6 - MLK - this is included as part of TriMet's proposed service plan for 5/1/04 and beyond.

#1138 - Frequent Bus service for Line 75 -

39th/Lombard - this is included as part of TriMet's proposed service plan for 5/1/04 and beyond.

#4001 - Frequent Bus service for Line 72 -

Killingsworth - this is included as part of TriMet's proposed service plan for 5/1/04 and beyond.

#1146 - Greeley Bikeway - construction is underway but not yet completed

I have not confirmed these discrepancies with the City of Portland or TriMet so I request that you do so. Please accept my apologies if I am in error.

I would appreciate a response regarding my questions if possible.

Sincerely,  
Brad Halverson  
4227 N Court Ave

**METRO**

November 25, 2003

Transportation Policy Advisory Committee (TPAC)  
c/o Metro Planning Department  
600 N.E. Grand Ave.  
Portland, Oregon 97232-2736

Dear TPAC Members

Subject: Periodic Update of Regional Transportation Plan (RTP)

We are requesting that the following five projects be added to the RTP's "Financially Constrained List." The trails are on the Metro Council approved Regional Trails System Plan and Map, and the RTP. These are trail projects that Metro Parks and Greenspaces and local partners are working on together. Four of the five the trail projects are complementary to Metro's 2040 Plan and Centers objectives, and lie within one-mile of Regional Centers and/or Town Centers.

Project:

**Sullivan's Gulch / Banfield Trail Feasibility Study (Regional Trail #37).** This trail which would be on the north side of the freeway would connect the Eastbank Esplanade Trail to the I-205 Bike and Pedestrian Trail. The Central City, Lloyd District Regional Center, Hollywood Town Center and Gateway Regional Center would all be connected by the future trail. Inter-modal transportation connections at LRT stations, particularly the Gateway Transit Center.

Cost:

\$150,000.

Partners:

Portland Parks, Portland Department of Transportation, Portland Development Commission, Sullivan's Gulch Neighborhood Association, PSU Urban Studies and Engineering departments

Project:

**Springwater to Trolley Trail Connection (Regional Trail #30).** Plan, design and construct sidewalks on S.E. 17<sup>th</sup> Ave. between the two trails. Bike lanes currently exist on the street. The project will connect the Springwater Corridor and Three Bridges project to the Milwaukie Town Center and Trolley Trail. The proposed project is within one-mile of downtown Milwaukie.

Cost:

Preliminary Engineering and Design cost of \$200,000. Implementation costs will be determined during the PE phase.

Partners:

City of Milwaukie, City of Portland, Sellwood Moreland Improvement League (SMILE), Friends of the Trolley Trail

Project:

**Mt. Scott Creek Trail (Regional Trail #48).** Feasibility study and cost of trail design and construction, including an under-crossing for the trail at S.E. Sunnyside Rd. Regional trail just east of the Clackamas Regional Center. The trail would connect Happy Valley to Mt. Talbert.

Cost:

Feasibility Study cost of \$75,000. \$692,000 for ROW Acquisition, Design, Preliminary Engineering and Construction of the trail

Partners:

City of Happy Valley

Project:

**Phillips Creek Trail (Regional Trail #32)** Trail loop around Clackamas Regional Center, connecting to I-205 Bike / Pedestrian Trail and the North Clackamas Greenway Trail, following Phillips Creek. Funds needed for trail studies, design, preliminary engineering, and construction.

Cost:

Feasibility Study cost of \$100,000. The study will estimate costs for right of way acquisition, preliminary engineering and construction of the trail.

Partners:

Clackamas County

Project:

**Columbia Slough Trail (Regional Trail #45).** Completion of trail from Kelley Point Park east to Blue Lake Regional Park. Funds needed for acquisition of rights of way and easements; trail design, preliminary engineering and construction.

Cost:

Feasibility Study cost of \$150,000. Implementation costs to be estimated following the completion of the study.

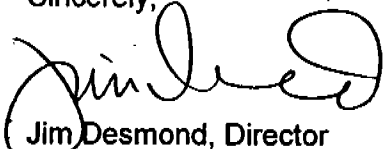

Partners:

City of Portland Parks, Portland Bureau of Environmental Services, Portland Development Commission, Port of Portland, Columbia Slough Watershed Group

If you have any questions or need more information on these proposed additions to the "Financially Constrained" List in the RTP, please contact: Mel Huie, Regional Trails Coordinator at (503) 797-1731 or Heather Nelson Kent, Planning and Education Manager at (503) 797-1739.

Thank you for your consideration.

Sincerely,

Jim Desmond, Director  
Metro Regional Parks and Greenspaces

## **MEMORANDUM**

Date: November 25, 2003  
To: Kim Ellis, Metro  
From: Robin Katz  
Re: Port's Comments on 2004 RTP Project Update (October 31, 2003)

The following comments are in response to the 2004 Regional Transportation Plan Project Update (October 31, 2003), Section 2. The numbers refer to projects.

**2070 - add**

The new 2070 is distinct from the old project, which was ODOT's "Widen I-205 SB on-ramp at Airport Way" for \$10 million (preferred system) in 2016-2025.

**4019 - delete**

There is no plan for another LRT station in PIC or for realigning track there. New 4060 is the correct LRT realignment project - to occur with future PDX terminal expansion east.

**4029 - change**

This project should occur in 2004-09.

**4030 - change**

This project is in the Columbia Corridor, not PDX IA.

**4037 and 4015 - combine**

These projects should be combined per direction from the City of Portland.

**4038 - change**

The project cost is \$790,000.

**4045 - change**

This project should occur in 2004-09.

**4060 - change**

This project should occur in 2010-15.

**4085 - change**

The project cost is \$350,000.

**4086 - change**

This project should occur in 2004-09.

11/26/03

To: Metro's Transportation Plan

From: Victoria Green, chair, Hayden Island Neighborhood Network (HiNoon)

To whom it may concern,

I have many concerns about your plans for Hayden Island. These include a railroad switching yard, and a bridge to the island from Marine Drive.

I join all of the North Portland neighborhood chairs in expressing my frustration with the I-5 Trade Corridor Study and their findings that would expand the existing lanes, and urge traffic to use I-205.

We want the bridge to go all the way across the Columbia River, and not stop at Hayden Island. We believe your plan would create a traffic nightmare, especially during the busy holiday shopping season at Jantzen Beach Mall.

Please read the enclosed letter from all the North Portland neighborhoods, who join the entire Columbia Blvd. business corridor, and the Ports of Vancouver and Portland.

We would like a reply back.

Thanks so much,

Victoria Green,  
Chair, HiNoon

Co-Chair Ginger Metcalf  
Executive Director  
Identity Clark County  
Phone: 360-695-4116

---

To: TPAC  
November 26, 2003 Meeting

## **The Project Name & Description:**

The Vancouver Rail Bridge Project is to replace the existing "swing span" with a "lift span" and place it closer to the middle of the river.

## **Estimated cost:**

The Coast Guard estimated the cost at \$42 million.

## **Fund Source:**

Highway Trust Funds (Bridge Discretionary Fund), as a Demonstration Project.

We are seeking funding from sources that are separate from the funding sources used to forecast the financially constrained RTP.

We hope to arrive at a funding strategy that does not negatively impact the JPACT "financially constrained system" funding forecasts, yet remains within JPACT's priority recommendations. Thus we will likely seek Highway Trust Funds through the Bridge Discretionary Fund and as a Demonstration Project for a nationally significant freight corridor, where we resolve difficult freight mobility and safety problems at an important multi-modal intersection of that corridor.

Jerry Grossnickle (503-289-3046)  
Chair, Bridge Committee, Columbia River Towboat Association

---

To: Bi-State Committee on Transportation  
October 23, 2003 Meeting

## The Request

We are asking the Bi-State Committee to recommend to JPACT and to the S.W. Washington RTC that the Vancouver Rail Bridge Project be included in the Financially Constrained System as a priority of the Regional Transportation Plan.

## The Project

The project is to replace the existing "swing span" with a "lift span" and place it closer to the middle of the river.

## The Problem

1. **Opening Too Narrow.** The current opening is too narrow. At less than 200 feet wide, it was built (in 1908) to handle much smaller paddlewheel-type freight vessels; today's tows are often over 600 feet long and over 80 feet wide. If there is current, wind or fog, passage can be very difficult.
2. **Too Close to I-5.** The navigational difficulties for downbound tows are compounded by the nearby I-5 bridge. The distance between the bridges is barely adequate to allow the difficult maneuvers required to safely negotiate the bridge openings. Although the rail bridge opening is reasonably well lined up with the I-5 lifts (both are near the Washington shore), captains do not call for these lifts when they can be avoided, nor are they allowed to use them during the peak traffic periods of morning and evening "rush hour" (6:30-9 AM and 2:30-6PM). So they usually navigate under the I-5 bridges' higher spans toward the middle of the river, which require tows to make a difficult "S" turn to line up with the narrow rail bridge opening. This maneuver becomes more dangerous as river levels rise and currents increase. When the river reaches 6 feet at the Vancouver gauge, the maneuver (through the high span) becomes too dangerous, and captains use the I-5 lifts. In years of high

run-off, the river can remain above 6 feet for 6 or 7 months at a time.

Bi-State Committee

October 23, 2003

Page 2

3. **Increasing Danger.** The dangers to tug & barge tows from a miscalculated maneuver are obvious and immediate, with the possibilities for loss of life and property a constant consideration for towboat captains. With increasing I-5 traffic, there has been increased pressure on captains to avoid using the lifts, and in 1999 the Coast Guard extended the length of rush-hour closures of the lifts. Thus the danger of a miscalculation has steadily increased. If a tow were to hit and disable the rail bridge (the closest alternative is east of The Dalles, at Wishram), the cost to the regional economy could be enormous.

### **The Benefits of a Relocated Lift Span**

1. **Ease Navigation.** If a rail bridge lift span is placed nearer the middle of the river, towboat captains will be able to use the higher spans of the I-5 without making the dangerous "S" turns to line up with the opening.
2. **Wider Opening.** The lift span would be about 300 feet wide if it were placed on current pier structures, making it a much safer opening for marine traffic.
3. **Faster Opening.** A lift opening could be made considerably faster than the present swing opening, resulting in less disruption to rail traffic.
4. **Avoid I-5 Lifts.** A lift opening placed more toward the middle of the river would allow marine traffic to nearly always avoid using the I-5 lifts. WSDOT calculated that the current average annual cost of lifts in I-5 traffic delay is about \$0.8 million and will steadily increase to a projected cost of \$12 million by 2021. Currently a lift causes about 20 minutes in midday traffic delay, but by 2021 the midday delay could exceed 90 minutes.
5. **Part of Existing Plan.** The project is part of an existing regional plan for improving I-5 freight and traffic mobility, for it is included in the Final Recommendations of the I-5 Trade and Transportation Partnership Strategic Plan. Although the Partnership study focused on the highway traffic problems of the I-5 corridor, it concluded that a modification of the rail bridge would have important positive impacts on traffic and freight mobility within the I-5 corridor.
6. **Planning for New I-5 Bridge.** The proposal would permit planners of a new I-5 crossing much greater flexibility, for the lifts at the north end of the bridge could be eliminated. This would result in lower construction costs and would

eliminate a large annual budget currently allocated to lift operations and maintenance. Removal of the lift towers would also increase safety for aircraft using the nearby Pearson airfield.

Bi-State Committee

October 23, 2003

Page 3

7. **A Third Track.** A new lift could be designed that would be able to accommodate a third track, if and when a third track is added to the bridge.

### **Cost**

Truman-Hobbs officials assumed the project would cost about \$42 million. This assumption was based on an unrelated study by SW Washington RTC for adding a third track to the bridge, and was considered relevant because it also contemplated adding a lift. However, the figure must be considered an educated guess, rather than resulting from an actual cost analysis. (Contact Bill Burgel [503-423-3728] at HDR Engineering, for information.)

### **Funding Considerations**

1. **Truman-Hobbs.** The CRTA initiated a "Truman-Hobbs" proceeding in 1999 to have the Coast Guard declare the rail bridge an "unreasonable hazard to navigation," thereby making it eligible for a federally funded modification under the Truman-Hobbs Act. In early 2003, the Coast Guard finally decided that the project did not meet the cost/benefit requirements of its regulations, partly because the bridge has not been hit often enough, and partly because the benefits to I-5 traffic could not be considered. The Coast Guard was also prevented by its regulations from considering the increasing danger of future accidents (which are inevitable, according to towboat captains' testimony) because of I-5 lift restrictions. Nor could the Coast Guard consider the massive disruption to freight movement that is likely to result from a major incident at the bridge, or the national security implications of such a disruption.
2. **Falling Through the Cracks - The Funding Conundrum.** The rail bridge project is truly multi-modal. It has significant benefits for marine safety as well as for highway traffic and freight mobility, and it also provides some benefits to rail from a faster opening (and even a potential benefit to air traffic safety at Pearson). But with the failure of Truman-Hobbs, there appears to be no single agency, federal or state, with the ability to take on the project and provide the funding. The bridge is private property, after all, and is not within the traditional jurisdiction of any highway department (even though they are now called transportation departments), and although the railroad owner is subject to the oversight of the Federal Railroad Administration, the FRA has

no legal ability to order a rail improvement for the primary benefit of marine and highway traffic. The Coast Guard has the legal ability to order a rail bridge improvement for the benefit of marine safety, but cannot use highway benefits in making its cost/benefit analysis to justify such an order.

Bi-State Committee

October 23, 2003

Page 4

3. **The Solution – Congressionally Mandated Truman-Hobbs.** However, Congress can declare on its own that the bridge is an unreasonable hazard to navigation, and it can direct the Coast Guard to apply Truman-Hobbs procedures. This has been done for other bridge projects. Thus, the Coast Guard would conduct the engineering study, do the EIS, and contract the entire project from beginning to end. The Coast Guard's Truman-Hobbs director at headquarters has indicated that their Congressional liaison office will work with our Congressional representatives to properly craft the necessary legislation. However, considering the benefits to I-5 traffic (as well as benefits to Amtrak and other federally supported rail projects from the new lift), funding would come from sources other than Truman-Hobbs, for which it technically does not qualify and which currently lacks sufficient funding in any event.
4. **SAFETEA** is the funding vehicle we would like to target to provide federal dollars for the project. To achieve funding under SAFETEA, we seek the support of the various transportation committees in both states, particularly the Bi-State Committee, JPACT and the SW Washington RTC.

### **Project Support**

In addition to support from the maritime community (CRTA, Columbia River Pilots, Port of Vancouver, Port of Portland, Pacific Northwest Waterways Association) and the Vancouver business community (Identity Clark County), the project received official support at the Truman-Hobbs hearing from the following:

Senators Patty Murray, Maria Cantwell, Gordon Smith and Ron Wyden  
Representatives Brian Baird, Earl Blumenauer, Peter Defazio, Darlene Hooley, Greg Walden and David Wu

WSDOT, ODOT, City of Portland, Metro

We expect support from these and others in our effort to seek funding for the project under a modified Truman-Hobbs approach, and have begun discussions with Congressional staffs about crafting the appropriate legislation.

## North Portland Neighborhood Services

November 28, 2003

Rex Burkholder  
Metro Councilor, District 5  
600 NE Grand Ave.  
Portland, OR 97232

Dear Councilor Burkholder:

As Chair of the Hayden Island Neighborhood Network, I have been authorized to write on behalf of the North Portland Neighborhood Associations:

Over the past year, the Bi-State I-5 Partnership has been pursuing options to alleviate traffic congestion on the I-5 Corridor. The group's suggestion is to widen the existing bridge.

The North Portland Neighborhood Associations think that just adding capacity to the existing Interstate Bridge does not solve the immediate or future needs of the greater regional area. Increasing capacity on I-5 burdens the communities along the corridor, and does not solve our congestion problem. Also, as safety becomes more of a concern to all types of commerce and freight movements, just widening I-5 leaves us in a very unstable situation.

**By putting another bridge across the Columbia River from Marine Drive at Portland Road to the Port of Vancouver we can help remove heavy freight congestion off the I-5 Corridor and direct it to where it needs to go – fast, efficiently and safely.**

As economies move to a more "deliver on order" commerce, we must be able to transit freight quickly. Global market growth in the container business is anticipated to have container volumes doubling or tripling over the next decade. In reviewing the broader themes, it is apparent that freight has unique characteristics when compared to passenger traffic. But the improvement of freight productivity warrants examining the linkages between both the main system miles and freight facilities. \* The current National Highway System International Connectors Infrastructures constraints are:

- Poor physical conditions
- Orphan status
- Inadequate coordination of investment strategies

**\*\*The Portland Development Commission agrees, saying the lack of inter-modal freight connections is the number one constraint to business investment in Portland after fears about the Superfund designation.**

By building freight priority passageways we can alleviate congestion and risk while improving commerce and freight movement through the industrial areas and ports, both northern Oregon and southern Washington. This is what the I-5 Trade Corridor Study was created to do.

November 28, 2003  
Page 2

**The North Portland Neighborhood Associations join the Columbia Corridor Business Association, the Pacific NW International Trade Association, and the Ports of Vancouver and Portland in recommending inclusion of study of a west side arterial bridge over the Columbia River between the Ports in the I-5 Trade Corridor Study.**

Sincerely,

Victoria Green  
Chair, Hayden Island Neighborhood Network

# MEMORANDUM

*Transportation Planning  
Community and Economic Development Department  
City of Gresham*

December 2, 2003

TO: Kim Ellis, Metro  
FROM: Ron Papsdorf, Principal Transportation Planner  
RE: 2004 RTP Update

---

In reviewing the October 31, 2003 public review materials for the Regional Transportation Plan update, it appears that a few of the project changes for Gresham are not properly reflected. These changes were included in the East Multnomah County submittal of October 20. That original submittal is attached for reference. The projects that need to be corrected are:

2047 - Division Boulevard - project limits and cost  
2027 - Civic Neighborhood LRT Station/Plaza - cost  
2014 - Glisan Street Bikeway - project limits and cost  
2057 - Gresham RC Pedestrian Improvements - cost  
new - MAX Path, Ruby Junction to Cleveland Station (\$2m)  
2048 - Burnside Blvd, Wallula to Hogan - add to FC system  
2028 - Powell Blvd - cost

Please feel free to contact me if you have any questions or need further information.

December 2, 2003

**Metro Council**  
600 NE Grand Ave.  
Portland, OR 97232-2736

**SUBJECT: Metro Council Public Hearing on RTP Update**

I am pleased to write this letter in support of the placement of the Sullivan's Gulch / I-84 Trail Feasibility Study on the RTP's "Financially Constrained" list.

Along with one of our graduate students in urban studies and planning, I have had the pleasure of meeting with staff from Metro Parks and Greenspaces and the City of Portland to develop a scope for a short-term class project for civil & environmental engineering undergraduate students at Portland State University. We are looking forward to connecting our students' educational experience with a real world project led by Metro and the City. We hope that in some small way our students' analysis can contribute to the overall success of the Feasibility Study.

The PSU Center for Transportation Studies is pleased to be working with Metro and other agency partners on this and other important projects in our region. Please do not hesitate to contact me at 503-725-4249 if you need any additional information.

Sincerely,

**Robert L. Bertini, Ph.D., P.E.**  
Director  
Center for Transportation Studies

# PORTLAND PUBLIC SCHOOLS

CLARENDON SCHOOL

Office of the Principal

December 2, 2003

Metro Regional Center  
600 NE Grand Ave.  
Portland, OR 97232-2736

Dear Metro:

Clarendon Elementary is located two blocks south of Columbia Boulevard and two blocks west of Portsmouth Boulevard.

We are concerned with the shifting of non-local truck traffic from Lombard to Columbia Blvd. We know that Lombard had one of the highest fatality rates in the state, and we worry that this shift will increase the danger to our children crossing Columbia Blvd. to get to our school.

The problem is that we do have a light to help us cross at Portsmouth and Columbia Blvd., but it is located at the top of a hill and is on a blind curve coming from the east. We would like to ensure that our children's crossing is appropriately labeled with school crossing signs, that trucks are aware of the need to stop at our stop signs and lights and that they watch for children, especially before, during and after school hours.

We see that your plan calls for education and enforcement of existing regulations and a truck-signing program. We think that it is important for you to follow through on these promises to keep our children safe.

Sincerely,

Antonio Lopez  
Principal

Sylvia Evans  
PTA President

and the School Site Council

**Subject: RTP freight routes**

**Date:** Wednesday, December 3, 2003 2:26 PM

**From:** Weinman, Ron <ronw@co.clackamas.or.us>

**To:** 'Kim Ellis' ellisk@metro.dst.or.us

**Cc:** "Skidmore, Ron" ronsk@co.clackamas.or.us

Kim,  
Clackamas County is recommending that McLoughlin Blvd be changed as follows

\* Mc Loughlin Blvd. (Hwy 224 to I-205 south ramps) - Clackamas  
County/Milwaukie/Gladstone

ACTION - Change the "Main Roadway Route" designation to "No  
Designation" "Road Connectors"

The reasons for these recommendations are

1. The route is one of the main routes between Oregon City, Gladstone and Milwaukie.
2. There are industrial properties throughout the Corridor with the largest being an area near Roethe Road of about 80 acres.
3. The area adjacent to McLoughlin is a major destination for freight. It serves everything from industrial to retail including a major auto sales area.
4. McLoughlin Blvd would be an alternative for traffic including freight when Highway-224 and I-205 is closed or congested do to incidents on this route.

My suggest is to leave the designation as is and plan on reviewing the classification as part of the major update that is expected to start within the next year. As mentioned, if a change is necessary I would recommend that McLoughlin Blvd be down graded to a Road connector.

## MEMORANDUM

To: Tom Kloster, Kim Ellis - Metro  
From: Laurel Wentworth, <sup>LN</sup> Chief Transportation Planner  
Subject: Recommendation on the draft 2004 RTP Update

Thank you for the opportunity to comment on the proposed amendments to the RTP. Other memos from PDOT address technical changes to classifications and projects. This memo raises the question of whether proceeding with the more significant proposed changes to the RTP are wise at this time. We share Washington County's concerns that this is too much change in a very constrained timeframe without adequate opportunity for review and comment. While not ideal, adopting an interim RTP for federal air quality purposes may better serve Metro and local jurisdictional needs at this time.

The points in support of this position are summarized below:

1. The RTP update references a new 2025 population and employment forecast (Page 6-13, Technical Update) that has not been evaluated by local jurisdictions. Local jurisdictions are required to use this forecast for purposes of TSP updates, including planning studies that amend TSPs. Making the change noted could be seen as a level of acceptance for a forecast that does not yet exist and could cause confusion for current planning projects.
2. Dropping the Priority System at this time is not a minor change. Portland has been using the Priority System for planning purposes since the adoption of the RTP. As noted on Page 6-58, Technical Update (New Section 6.8.15), moving to either the Financially Constrained or Preferred System for planning purposes can lead to significant underestimating or overestimating the available transportation system over the next 20 years. Moving to either system for planning purposes needs to be addressed, as the commentary in section 6.8.15 says, "in detail to ensure a balance between allowing desired development and preventing land use actions that outstrip the public ability to provide transportation infrastructure."
3. Making the changes proposed would require complete or partial rewrites of several RTP chapters – particularly Chapter 5, Growth and the Priority System. It will be very confusing to not have the entire RTP updated and reprinted to be consistent with the significant changes noted above.

While we appreciate the effort that staff has made to produce a financially constrained RTP that meets federal requirements, it is premature to adopt RTP amendments that will result in such significant changes at this time.

We urge TPAC to recommend the following to JPACT:

- Complete an RTP that will meet federal requirements
- Do not adopt changes to the RTP that include dropping the Strategic System in favor of Financially Constrained and Preferred Systems.
- Direct Metro staff to establish a work program that will provide for a comprehensive update of the RTP.

December 3, 2003

**MEMORANDUM**

To: Tom Kloster, Kim Ellis - Metro  
From: Deena Platman, Transportation Planning  
CC: Laurel Wentworth, John Gillam  
Subject: Requested changes to the draft 2004 RTP Policy and Project Update

After further review I have a few additional changes to the draft documents.

**1 - Policy Update**

- Add N Greeley Avenue between N Interstate Avenue and N Going Street as a Road Connector on the Regional Freight System map. Portland's TSP identifies Greeley as a Major Truck Street located in a Freight District.
- Delete the Gateway Regional Center from section 6.7.7 Areas of Special Concern. Portland's TSP has addressed this area in accordance with the Transportation Planning Rule. Delete or revise Figure 1.13b Gateway Regional Center -- Special Area of Concern to reflect its current status.

**2 - Project Update**

- Add a new project to the Financially Constrained System:

Project Name: Lombard/St. Louis/Ivanhoe Multimodal Improvements

Segment: St Louis - Philadelphia

Description: Implement signal and pedestrian crossing improvements to improve pedestrian safety and freight flow.

Estimated Cost: \$1.1 million

Timing: 2004 - 2009

Jurisdiction: PDOT

This project implements a portion of the St Johns pedestrian district improvements (#1150). This phase was selected for MTIP funding and should be identified as a stand-alone project in the RTP.

- # 1095 - Union Station Multi-modal Center Study, move project to Financially Constrained System and update cost estimate to \$300,000. This project is a priority for the City of Portland; submitted in the most recent MTIP process and likely to be resubmitted for MTIP funding in the future.

December 3, 2003

**MEMORANDUM**

To: Tom Kloster, Kim Ellis - Metro  
 From: John Gillam, Transportation Planning Division  
 CC: Laurel Wentworth, Deena Platman, Jeanne Harrison  
 Subject: Requested Changes to the draft 2004 RTP Project Update

Upon further review of the draft (10/31/03) 2004 RTP Project List we have a few additional requested changes to this document.

**Project Updates**

Add the following projects to the Financially Constrained System:

1. Project #1173, Hillsdale TC Pedestrian Improvements.

Project Name: Retain same name.

Project Location: Retain same location.

Description: Retain same project description.

Estimated Cost: Retain same project cost.

Program Year: 2010-2015

Jurisdiction: Retain as Portland

Pedestrian and street network improvements for a Town Center warrant inclusion in the Financially Constrained System. This project is identified in the Portland TSP as a mid-term timeframe.

2. Project #1096, Barbur/I-5 Corridor Study.

Project Name: Retain same name.

Project Location: Retain same location.

Description: Retain same project description.

Estimated Cost: Retain same project cost.

Program Year: 2004-2009

Jurisdiction: Retain as Portland

This study is part of the Metro Corridor Initiatives Planning Program and its completion and recommendations will provide improved project definitions for several RTP projects in the vicinity of the Barbur Boulevard/I-5 Corridor. This project is identified in the Refinement Plans and Studies Chapter of the Portland TSP.

3. New Project for the Capitol Hwy/Vermont/30<sup>th</sup> Ave. Intersection.

Project Name: Capitol Hwy/Vermont Intersection Improvements

Project Location: Capitol Hwy/Vermont/30<sup>th</sup> Ave. Intersection

Description: Provide traffic safety and pedestrian and bicycle facility improvements at this intersection and approaching street segments.

Estimated Cost: \$450,000

Program Year: 2010-2015

Jurisdiction: Portland

This project is identified as part of the Capitol Highway Plan adopted by City Council. It was not built as part of the initial street project improvements due to budget limitations. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe.

Add the following project to the Preferred System:

1. New Project for Capitol Hwy. between Sunset and Barbur

Project Name: SW Capitol Highway - Terwilliger Segment.

Project Location: Capitol Hwy.: Sunset - Barbur

Description: Provide pedestrian and bicycle facility improvements.

Estimated Cost: \$910,000

Program Year: 2010-2015

Jurisdiction: Portland

This project is identified as part of the Capitol Highway Plan adopted by City Council. Portions of this project segment are rated as higher priority improvements. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe.

2. New Project for Capitol Hwy. between Huber and Stephenson

Project Name: SW Capitol Highway – Marquam Segment.

Project Location: Capitol Hwy.: Huber- Stephenson

Description: Provide improved pedestrian crossings and median design treatments.

Estimated Cost: \$750,000

Program Year: 2016-2026

Jurisdiction: Portland

This project is identified as part of the Capitol Highway Plan adopted by City Council. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe.

Delete the following projects from the Financially Constrained System, add to the Preferred System:

1. Project #2024, Gateway RC Pedestrian District Improvements – Phase III.

Retain all other current project information.

This is the last of a three phase implementation schedule of local street network development in the regional center. The first and second phase of this project should remain as is in the Financially Constrained System.

**MEMORANDUM**

To: Tom Kloster, Kim Ellis - Metro  
 From: John Gillam, Transportation Planning Division  
 CC: Laurel Wentworth, Deena Platman, Jeanne Harrison  
 Subject: Allocation Adjustments for Requested Changes to the draft 2004 RTP Project Update

The following provides a summary of allocation adjustments to the Financially Constrained System resulting from our requested project list changes through memos of December 3 from Deena Platman and myself.

Projects added to the Financially Constrained System

Project #1173, Hillsdale TC Pedestrian Improvements	\$3,465 000
Project #1096, Barbur/I-5 Corridor Study	\$1,732,000
New Project, Capitol Hwy/Vermont/30 <sup>th</sup> Ave. Intersection	\$ 450,000
New Project, Lombard/St. Louis/Ivanhoe Multi-Modal Imps.	\$1,100,000
Project #1095, Union Station/Multi-Modal Center Study	<u>\$ 300,000</u>
Subtotal	\$7,047,000

Projects deleted from the Financially Constrained System\*

Project #2024, Gateway RC Ped. District Imps. - Phase III	\$6,930,000
---	-------------

\* Project is added to the Preferred System

As you can see, our adjustments place our requests within \$117,000 of balance. This should be within acceptable estimate range at this level of detail. But if these figures need to exactly balance, then reduce Project #1173 by this amount. Please call me if you have any questions.

**From:** "Chris Smith" <[chrissm@easystreet.com](mailto:chrissm@easystreet.com)>

-----Original Message-----

From: Don Baack [<mailto:baack@pacifier.com>]

Greater SW Portland is going to be the loser in the latest changes to The Regional Transportation Plans if commissioner Jim Francesconi and the Portland Department of Transportation, PDOT, have their way. Guess what, a huge slush fund, \$80,375,000, for yet to be designed projects associated with the Tram and North MacAdam development will be the winner. The Tram is slated to get \$15 million, and changes to the west end of the Ross Island Bridge are slated to get over \$25 million from the scarce funds that will be spent in the immediate future. That will just be the beginning, notice how the tram costs have doubled in the past month? Is this huge slush fund going to pay for the tram cost over runs?

To pay for the largess in the North MacAdam to encourage development, we are asked to forgo improvements planned long ago and patiently awaiting funding.

The net effect on SW Portland will be a longer wait to get through the light on Barbur at Sheridan just south of I-405, we now must wait for 5 light cycles at the 5-6 pm rush hour, a two lane Front Avenue (Naito Parkway) which will force more traffic onto Barbur, and adversely affect our ability to get downtown to Oldtown, to the Ross Island Bridge and to NE Portland via the Steel Bridge. What will Barbur Blvd be like in this area when Front becomes constricted? We will wait even more signal cycles at Sheridan, we will still walk in the mud along Capitol Highway or worse, not be able to safely walk or bike along Capitol Highway at all. We will not be able to walk along Barbur Blvd for lack of sidewalks. We will not have signals at intersections which are very difficult to negotiate.

How is this grand theft of our transportation dollars happening? PDOT and Metro are in the process of a quick, stealth (there has been no City of Portland public comment opportunity, just a tiny postcard early in October, and the Portland City Council has not approved the changes) updating the Regional Transportation Plan, RTP. The RTP specifies which projects will be funded with federal transportation dollars in the next and subsequent rounds. To get considered in the next 5 years, your project must be on the preferred or financially constrained list. Everything else is eyewash.

I want to explain why I call the Barbur Streetscape Project the silk purse for a sow's ear project. In 1997 and 1998 the Oregon Department of Transportation Department, ODOT, was preparing to resurface Barbur Blvd. ODOT was preparing to address a number of sidewalk and bike lane deficiencies but did not want to install street trees as was required by City of Portland standards. A number of folks in SW Portland objected. The net result was an agreement between the citizens of SW Portland and Charlie Hales, at that time the Commissioner of Transportation, that an urgent study would be done for the bike and pedestrian needs of the entire length of Barbur Blvd, and that funding would follow on a priority basis. The study was completed within 6 months. To date, Tri-Met has funded and built just one small pedestrian crossing. 3 additional pedestrian crossings have been promised.

Until now the funding for the project, 4,620,000 has been on the preferred list. Now it is being dumped into the ignore category and we can put up with no sidewalks, interrupted and dangerous bike lanes for at least 10 years. Really makes you want to trust your government doesn't it.

You will be interested to know that just 2 capital projects have been built in SW Portland in the last 2 or 3 years with a total cost of under \$800,000.

What can we do? We can testify at the 2pm Metro Council hearing on December 4th about our objections to these changes. Ask them to put the following projects on the financially constrained list: 2 Capitol Highway Plan projects, Hoot Owl Corner and Sunset to Terwilliger, the section from Multnomah to Taylor's Ferry is already on that list. Ask them to keep the promises made on Barbur in 1998 and put the entire 4.6 million Barbur Streetscape Project back on the financially constrained list, ask that the signals at SW Multnomah Blvd and Garden Home, SW 62nd and Taylors Ferry, SW Vermont and Capitol Highway at SW 25th, and the bike and ped improvements for BH Highway be on the financially constrained list. Ask that 5 million in funding for the pedestrian crossing of I-5 associated with the tram be broken out as a separate project so that the funds cannot be used for other purposes. Ask that the Newberry and Vermont Bridges on Barbur be put on the list for replacement in 5 years or so to assure the funds are available when these bridges must be replaced. (They underwent temporary repairs 5 years ago and were scheduled to last 10 years from that time.)

Ask that the total funds designated for the I-5, North MacAdam, Ross Island Bridge changes be reduced from the \$80,375,000, (projects 1025, 1027, 1030, 1087 and 1098) currently in the financially constrained budget. Ask that the projects be broken into a number of projects and a portion of them be removed from the financially constrained budget.

You can let Jim Francesconi and the rest of the Portland City Council know what you think of their transportation decisions and spending priorities. We are being screwed and I for one am tired of it. We need a more equitable distribution of transportation dollars. Here are a few facts:

Per the 1999 street inventory information I have: SW has 50.9 miles of substandard arterial street mileage, which represents 45% of the total substandard arterial street mileage in the entire City of Portland. Arterials are streets like Barbur, BH Highway, and Capitol Highway. SW has 144.7 miles of substandard local streets, 35% of the total substandard local streets in the City of Portland. The reason the arterials and streets are classified substandard is mostly due to not having sidewalks.

This is not going to change unless we decide to do something to change it. It will take each of us making our voice heard loud and clear. Join me in objecting to this theft.

Pass this on to your friends and neighbors. Speak up now.

# Southwest Neighborhoods, Inc.

7688 SW Capitol Highway, Portland, OR 97219 (503) 823-4592

December 3, 2003

Metro Regional Center  
600 NE Grand Ave  
Portland, OR 97232

Our coalition of 16 neighborhoods serving Southwest Portland has reviewed the RTP as posted on your website. We have also coordinated our concerns with the Portland Bureau of Transportation planning staff.

- Southwest Portland is behind the rest of the metropolitan area regarding the transportation infrastructure serving the communities. Within Portland itself, 45% of the substandard arterials in the entire city are within Southwest Portland, even though it comprises only about 1/7<sup>th</sup> of the land area. Pedestrian facilities, so important to our school children and our transit system, as well to air quality and personal health, are almost non-existent, with only 15+/-% of the city streets having sidewalks. Priority funding to bring Southwest Portland up to the standard of the rest of the metropolitan area must be provided if progress is to be made to counteract this historic neglect. These improvements can be accomplished in accordance with the Portland Transportation System Plan (TSP) but only if both the City and Metro provide funding.
- Comprehensive project development concept plans have been carried for three major project areas during the past decade in Southwest Portland. These are for Capitol Highway, Barbur Boulevard Streetscape, and South Portland Circulation.
  - Capitol Highway Plan. This is the oldest of these priority plans. Project funding to complete this construction has not been incorporated into the funded portion of the RTP. Specifically, The Portland TSP 90029 and 90070 need to be given immediate funding priority within the RTP, and RTP# 1202 must be retained.
  - Barbur Boulevard Steetscape Plan. This 1999 project to create a series of safer pedestrian crossings as well as construct longitudinal sidewalks along this major trafficway was to have

Arnold Creek • Ashcreek • Bridlemile • Collins View • Corbett-Terwilliger-Lair Hill • Crestwood  
• Far Southwest • Hayhurst • Hillsdale • Homestead • Maplewood • Markham • Marshall Park  
• Multnomah • South Burlingame • West Portland Park

commenced upon plan completion. It hasn't, with only one crossing constructed in 4 years. This project appears to be RTP# 1199. It should have been completed prior to the current reconstruction of I-5 through the corridor and the construction of the ITS system designed to handle the added traffic demands of this corridor, but these projects were funded while the community and personal safety needs were not. Recommend immediate full funding. Note that subsequent studies of this corridor are also being recommended in the RTP, but the value of these improvements will be unaffected the results of those studies.

- South Portland Circulation Plan. This plan is contained in the RTP as #1027, with full funding at \$28,293,000. This is better handled as a series of projects, with those elements adding to the transportation infrastructure, such as the pedestrian bridge over Interstate 5 and the safer access to the Ross Island Bridge receiving priority and funding during the life of this RTP, and the other elements moved to the priority classification.
- In addition to those projects contained within specific plans, we offer comment on the following projects in the Portland TSP or in you your RTP.
  - We strongly support RTP# 1211, Garden Home Road, SW (Capitol Hwy-Multnomah and RTP# 1189, Beaverton Hillsdale Hwy at 62<sup>nd</sup> Ave pedestrian improvements and urge the construction of these in the immediate future. These intersections are extremely dangerous at this time.
  - We urge Metro to consider moving RTP#'s 1176 and 1177 to the 2004-2009 time frame.
  - The recently identified safety improvements (guardrails) to Boonesferry Road and Arnold Street need to be added to both the TSP and RTP.
  - RTP# 1181, "Beaverton-Hillsdale Highway ITS" needs to have its description clarified to "Capitol Highway/Beaverton-Hillsdale Highway ITS". The project location appears to start on Capitol Highway as it includes Terwilliger within the project description. The Beaverton-Hillsdale Highway does not intersect Terwilliger, and the project most likely incorporates the signal at Capitol Highway and Terwilliger. Further, any ITS improvements that project excess traffic must be accompanied by adequate pedestrian facilities when placed in an urban setting such as this. Accordingly, the cost of this project needs to be increased to include the construction of any missing sidewalk and street crossing sections.
  - Key projects for moving traffic through SW Portland have not been included within the 2025 RTP Financially constrained system. These projects would provide relief to the I-5/Barbur/South Portland

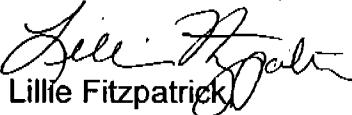

corridor. Specific items that should be brought into the funding umbrella to assure their construction are RTP#'s 1004, 1031, 1195, and 1196.

- Barbur Boulevard structures over Vermont and Newberry, in the vicinity of the northerly Capitol Highway/Barbur intersection. Five years ago ODOT performed emergency repairs to these structures while heavy traffic was detoured through residential areas. They indicated at that time the remaining physical life of these timber structures was 10 years. Reconstruction of these structures, with the addition of appropriate bike and pedestrian facilities, must be included in the immediate time frame.
- Key projects for moving traffic through SW Portland have not been included within the 2025 RTP Financially constrained system. These projects would provide relief to the I-5/Barbur/South Portland corridor. Specific items that should be brought into the funding umbrella to assure their construction are RTP#'s 1004, 1031, 1195, and 1196.

# How to Comment on the update to the 2004 Regional Transportation Plan

The public comment period for the 2004 Regional Transportation Plan (RTP) begins on October 31, 2003 and concludes with a public hearing on December 4, 2003. You may submit comments online at Metro's website:

[www.metro-region.org/rtp](http://www.metro-region.org/rtp)

Comments and questions may also be mailed using the form below, or left on Metro's Transportation hotline at (503) 797-1900, Option 2.

## Comments:

Highway 26 (Sunset Highway) Needs AN expansion of at least one lane on each side from Highway 217 interchange west to Cornelius Pass Rd. Building this infrastructure will support Oregon's economic recovery AND increase our ability to move goods, services and people. Clatsop, Columbia & Washington County citizens would benefit significantly with short commute time thus being able to spend more time with their families. Business will benefit with faster delivery times (over)

<input checked="" type="checkbox"/> Please add me to the RTP interested citizens mailing/e-mail lists	

And quicker access to distribution hubs.

The existing infrastructure is over loaded and is a significant bottleneck for commuters, truck traffic AND service vehicles

The new lanes could be designed for High Occupancy Vehicles or for truck traffic only. A final decision for the use of the new infrastructure would require a refinement study to determine the most efficient traffic usage and air quality impact.

Re: Mount Scott Creek Trail Project #48

Dear Councilors:

The Mount Scott Creek Trail was included in 1992 in the Metro Regional Trail plan as Project # 48. A segment of that project in Happy Valley has already been completed. With the completion of the new Sunnyside road bridge over Mt. Scott Creek the time is right to proceed to connect the Springwater trail on the north of Happy Valley with the existing trails on the portion of Mt. Talbert owned by Metro that is located just south of Happy Valley. This trail would allow for bicycle and pedestrian access to extensive trails in both north and south directions from Happy Valley. As you know Happy Valley is in great need of these means to get its residents out of their cars and exercising their bodies. This trail will also provide a very useful means of pedestrian and bicycle access from Happy Valley to the shopping center that is located at 122<sup>nd</sup> and Sunnyside Road. Most importantly this trail will provide the fast growing population of Happy Valley with a trail connection to the premier Metro amenities in the vicinity to Powell Butte via the Springwater Corridor and to Mt. Talbert on the south. Happy Valley is very willing to provide local funds to help complete this trail, but needs the help that will come from adding this trail to the Regional Transportation Plan. The City Council considers this our number one trail priority and we thank you for consideration of helping us complete the trail.

Very Truly

Eugene Grant  
Mayor

RE: RTP Update Public Comments

Dear Ms. Ellis:

The City of Wilsonville has the following comments regarding the draft 2004 RTP Update:

1. Place the entire Wilsonville Road Interchange project within the Financially Constrained list, not just the PE and ROW with construction on the Preferred List. This is important because this project has been identified as a high priority project both by the City and by ODOT, as well as regional and federal partners who participated in ODOT's 2002 Freeway Access Study.

The critical nature of this project is evidence by the City of Wilsonville's commitment of \$3.5 million in the city's current budget to begin Phase 1 of the needed improvements. However, this is a very limited fix to the problems that exist at the interchange and a more comprehensive solution is now moving through the OTIA 3 process as a freight mobility project. Placing the entire project on the Financially Constrained list recognizes the level of significance this project has on the I-5 south metro region and for freight mobility.

In response to the proposed update to the RTP System Maps, the City has attached an updated map of our major freight distribution centers and truck terminals (see Figure 3a). There are several industrial areas in south Wilsonville that utilize the Wilsonville Road Interchange on a daily basis and the importance of improving the interchange for freight mobility and safety can not be emphasized enough.

2. As submitted at the October 29, 2003 TPAC Workshop, the City of Wilsonville has re-evaluated two project priorities since the last update of the financially constrained list and they would include the following changes to the draft 2004 RTP:
  - Remove project #6091, the Boeckman Road/I-5 Overcrossing, from the financially constrained list and move it to the preferred system. The project total in the draft RTP is \$9,890,000.
  - Add project #6093, the Barber Street extension to the financially constrained list. The project total in the draft RTP is \$7,310,000.

As you can see, this would remove a burden of more than \$2.5 million from the financially constrained system. The Barber Street Extension project was determined to be a higher priority project because of its ability to have a greater impact on providing relief to the Wilsonville Road Interchange. This was concluded as part of the *I-5/Wilsonville Freeway Access Study*, which was prepared by DKS Associates in November of 2002 in coordination with ODOT, Metro, and the City of Wilsonville.

Letter to Kim Ellis, Metro

RE: RTP Update

December 4, 2003

Page 2

3. UPDATE Appendix 4 – Transportation Analysis Zone Assumptions, does not list Wilsonville as an Industrial Area (pg. 3) under 2040 Grouping. With Interstate 5 running through the middle of Wilsonville, the City has a significant Industrial land base which utilizes both the Wilsonville Road Interchange and Stafford Road Interchange. The majority of our industrial areas are located near established street and transit routes, therefore the City of Wilsonville should be included as a Tier 1 Industrial area.
4. The City has reviewed the proposed Policy Map Updates and there are several changes to be made to have the maps reflect the City's Transportation Systems Plan. The proposed modifications are summarized in a spreadsheet and shown on several figures attached to this letter.
5. In Appendix 8, under Title 6: Regional Accessibility, Regional Street Designs, the City of Wilsonville should now meet compliance with the adoption of the Transportation Systems Plan.

Thank you for the opportunity to provide these comments on the draft 2004 RTP Update. If you have any questions, please call Danielle Cowan, Public Affairs Director, at (503) 682-1011 or Laurel Byer, Assistant City Engineer, at (503) 682-4960.

Sincerely,

Arlene Loble  
City Manager

Metro Council Meeting

DEC 05 2003

To: Metro Council Members  
From: Jill Fuglister, Coalition for a Livable Future  
Catherine Ciarlo, Bicycle Transportation Alliance

Re: Comments on the 2004 RTP Update

Thank you for the opportunity to comment on the 2004 update of the Regional Transportation Plan. On behalf of the Coalition for a Livable Future and the Bicycle Transportation Alliance, we would like to express our concern about the process of the update. We recognize that Metro is under considerable pressure to meet federally imposed deadlines. However, we believe the public has not been given an opportunity for meaningful involvement in an update that, far from being a "minor" update, will have a tremendous impact on the region's transportation system.

The Coalition for a Livable Future (CLF) is a coalition of 60 community organizations working to protect, restore, and maintain healthy, equitable, and sustainable communities in the greater Portland metropolitan region. The Bicycle Transportation Alliance (BTA) is a non-profit organization working to create healthy, sustainable communities by making bicycling safer, more convenient and more accessible in Oregon. Both organizations support Metro's Region 2040 vision for the Portland metro area as a place where people of all ages, incomes and ability have an array of daily transportation options available to them. We believe that this can only be accomplished by deliberate, strategic investment that ensures the development of complete networks for all modes of travel – including transit, walking and bicycling – as well as motor vehicles.

We are concerned that the current RTP update, in the crunch to meet a constrained timeline, will move the region away from the principles and modal goals set out in the 2000 RTP. Furthermore, the public has not had a meaningful opportunity to understand and comment on these changes. Characterized as a "housekeeping" update, the proposed revisions add over \$1.5 billion in projects to the Financially Constrained list, according to Table 1, *Summary of 2004 RTP Financially Constrained System Project List Changes*.

Despite the scope of these proposed additions, Metro began work on the Air Quality Conformity Analysis on November 3, only three days after the public comment period opened. This raises a critical question: how would the Metro Council and JPACT respond if public comment were to reveal a lack of support for major projects being modeled? Clearly, with air quality modeling well underway, Metro would not be well positioned to respond in any meaningful fashion. Again, we understand that the region is facing tight deadlines with potentially significant effects. However, characterizing the update as "minor" is inaccurate at best.

The heart of CLF's and the BTA's concern about the update centers around the project mode split in the new Financially Constrained System. At the beginning of this RTP update, Metro staff laid out a set of guiding principles and targets that were to drive the update process.

A key goal (driven by the need to keep the region in air quality compliance) was that project mode splits should remain relatively stable in the 2004 RTP Update process.

This goal has not been met. The table below is copied from Metro's public outreach materials, with a final column added. It reveals an 11% increase in road and bridge projects and a 14 % drop in transit dollars.

Distribution of Financially Constrained System Projects

Balancing Modes of Transportation	[TARGET SPLIT]		
	2000 RTP	Draft 2004 RTP	Change
Road and Bridge	35%	46%	+11%
Bicycle and Pedestrian	7%	9%	+2%
Transit Projects	55%	41%	-14%
Boulevard Projects	3%	4%	+1%

While we recognize that the changes result from OTIA III, the availability of state funding should not preempt Metro's planning process. Furthermore, if the region is going to make such a substantial shift away from the mode split outlined in the 2000 RTP, the public should understand that shift and have a meaningful opportunity to comment on it. Again, such a change is hardly "housekeeping."

Recognizing that the region must move forward with this RTP update in order to meet federal deadlines, CLF and the BTA urge the Council to note that the project mix in this update does not reflect a well-thought-out, well-coordinated strategy to achieve a truly multi-modal transportation system.

Looking forward to the next major RTP update, we urge the Metro Council to set a clear goal of achieving a mode split that looks more like that contained in the 2000 RTP – a document developed with extensive and meaningful public involvement. With virtually no public process and little technical evaluation, the current RTP update with its substantially shifted mode split should be considered an interim document. It should not be the basis of future plans.

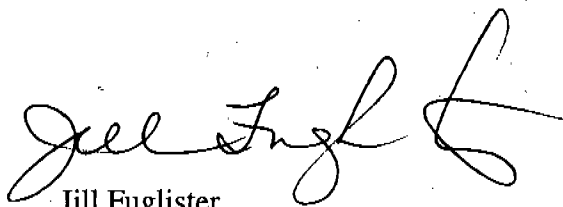

Specifically, CLF and the BTA request that the Council adopt a resolution to use the 2000 mode split as the starting point for the next RTP. Moving forward, we urge you to set even more aggressive targets for transit, bicycle and pedestrian mode shares to guide the next update.

Thank you for your consideration of these comments. We look forward to working with Metro, the region's jurisdictions, and its citizens on the 2006 RTP update.

**RE: METRO REGIONAL TRANSPORTATION PLAN POLICY UPDATE  
PUBLIC COMMENTS**

Dear Mr. Bragdon:

STAFF

Rita Pedersen  
Executive Secretary

Thank you for the opportunity to comment on Metro's Policy Update concerning the 2004 Regional Transportation Plan (RTP). I have taken this occasion to review Metro's updated documents and compared its project highlights and amendments with proposals found in the City's Transportation System Plan (TSP).

I speak to you as the President of SW Hills Residential League (SWHRL) on matters of concern in our neighborhood. The League was established and incorporated in 1969. We are recognized by the City as the official neighborhood association representing Portland's SW Hills neighborhood. That includes the Sunset Highway and the Terwilliger Parkway. Currently we have 23 Directors on our board who represent the various areas of the Neighborhood. We have been *Preserving Our Neighborhood's Heritage For 35 Years*. Today I speak of our neighborhood's future. I think you may know of our neighborhood—it's the one used familiarly by Portland civic leaders as a backdrop for the downtown livability. The Neighborhood is used by all Portlanders and visitors; we welcome that, but it has come with a cost.

The League is disappointed that the Metro Transportation Plan fails to recognize the true needs of the SW Hills. Conversely, Portland's Transportation System Plan continues to identify the Neighborhood's needs as genuine, just as they have done in past years—in their previous Twenty Year Transportation Plan. The problem is the City has not really done anything with the plan, except to construct lots of speed bumps on our neighborhood's streets. I will limit my remarks to two areas of the Metro plan: The Oregon Health Sciences University's (OHSU) Aerial Tram and Highway 26's Sunset Corridor. Metro proposes pumping millions and millions of transportation dollars into these two projects alone.

The OHSU Aerial Tram proposal, which we see you have allocated some \$ 15 million, does not adequately represent the authentic needs of the Neighborhood.

It's not innovative, rather it's elitist. Moreover, Metro should not be in the business of funding a private transportation system. It is noteworthy that many Oregonians have become cynical about the function and cost of big government bureaucracies, like Metro. The League is not a part of that movement. We remain optimistic about the potentials of government in solving problems. However, when Metro seemingly has abundant money to spend on risky, expensive and divisive projects, we pay attention. It is an outrageous waste of our transportation dollars. We strongly suggest deleting this project from Metro's Regional Transportation Plan, placing it reasonably where it belongs, in the Projects Dropped category. This would eliminate a burden of \$ 15 million from the financially constrained transportation system.

The League believes the City's proposal for the OHSU Aerial Tram is not responsive to the true needs of the Neighborhood and that it is irresponsible to use our City's transportation dollars to fund such a venture. OHSU and current city officials have underestimated the importance of cultivating friendly democratic relations with the leaders in our neighborhood system. Lately their theme resembles, "Damn the torpedoes! Full steam ahead!" It's not the Portland Way. SW Hills residents would definitely not identify one our transportation needs as an aerial tram traveling above our streets. It is utterly not needed and it has been a highly divisive issue in all of the neighborhoods located in the OHSU vicinity (Homestead, Corbett/Terwilliger/Lair Hill, Hillsdale and SWHRL). OHSU has become committed to building higher and higher fences in the Neighborhood, mostly beneficial to themselves and their developers. Metro is adding fuel to the fire by proposing it partially fund this private and very expensive private transportation venture. Lastly, on this matter, there exist no compelling reason to build an aerial tram in the Neighborhood and it certainly does not conform to the City's own transportation plan. Portland's Transportation System Plan is highly supportive of making "it more convenient for people to walk, bicycle, use transit and drive less to meet their daily needs. By "transit" we assumed they meant public transportation, not private. The league joins collectively with other neighborhood associations in urging Metro to focus funding on public oriented projects that are highly beneficial to public and neighborhood needs.

Our second area of concern is Highway 26's Sunset Corridor. This is a portrait of a monstrous transportation failure. It's appearance is revolting, its congestion, noise, pollution and injury are legendary, yet Metro continues to propose spending millions and millions of transportation dollars improving this funnel. That is precisely what it is, a transportation funnel, because no matter how many lanes you add or improve, it still must pass through the tunnel entering or exiting the downtown. There's no getting around that fact. It's Paradise Lost and the concrete walls constructed to hold back Mother Nature's landscape resembles something from a dystopian science fiction scene, where humanity is diminished, cast aside to make room for machines. It's about as disastrous as it gets. It's not the future, it's the past and it's a huge failure. Apparently Metro still believes the automobile is indomitable, however there exist urban transportation models that promote the use of public transportation. Rather than perpetuating a poor transportation model, which has wasted enormous amounts of human time and resources the League proposes that a different trajectory be funded, one geared toward viable mass transit and multi-use transit ways for non-motorized travelers. We feel that reasonable progress can be

made toward constructing such transportation models if Metro refocuses the funding and expertise there. Portland needs the leadership to thoroughly prepare us for the future. Sadly Metro's current proposals falls short of meeting this need, as well as failing to address the here and now.

Back in the heyday of the civil rights movement, a wonderful, eloquent speaker, Fannie Lou Hamer, observed that she was sick and tired or being sick and tired. Well, that statement today nicely summarizes how many SW Hills residents feel. We live in an area of the City with no real multi-use transit ways, that are separated from increasingly speeding motor vehicle traffic. Intriguingly, every Twenty Year Plan that comes along identifies the same streets to be improved for a new generation. But it never seems to get done. The City's Transportation System Plan is the latest version of these prospects. In its introduction, City transportation leaders argues that "alternative approaches must be used to ensure integrated, comprehensive solutions." Our neighborhood loves this idea. Many of the streets identified for improvements in this current version have appeared before, so it leave us perpetually wondering what happened during the last twenty years. The streets and project numbers are as follows:

90001 Davenport  
90024 Broadway  
90029 Capitol  
90031 Dosch  
90034 Hamilton  
90038 Humphrey  
90049 Marquam  
90054 Patton  
90063 Sunset

There<sup>are</sup> all there again cited for bicycle and pedestrian improvements. Certainly we would add SW Fairmount Boulevard to the streets identified. Fairmount is a scenic destination for all Portlanders and is long overdue for pedestrian improvements.

In sum, SW Hills Residential League recommends the following:

- \*Delete funding for the OHSU Aerial Tram project
- \*Direct the Metro staff planners to focus their talents on solving the Sunset Corridor's problems in practical and intelligent ways that utilize viable modern models
- \*Direct the Metro staff planners to undertake a comprehensive update of the RTP, coordinating it thoroughly with the City's TSP
- \*Re-direct the millions of dollars these additions will save the regional transportation program toward the "alternative approaches" Portland's transportation experts suggest

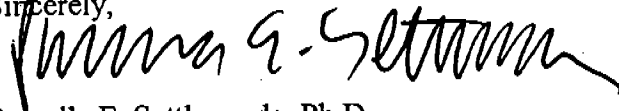

\*Moving up the program years for the SW Hills street projects to 2004-10

SW Hills Residential League supports our City's vision for making our neighborhood's streets safe and friendly for non-motorized travelers. We believe such transportation improvement programs should be a transportation priority at Metro. In the SW Hills, the transportation experts long ago took away the Neighborhood's streetcars, which delivered people efficiently and safely up and down the hills and throughout the downtown. What has evolved are very large, noisy and polluting cars, that travel at very high speeds, up and down our narrow, windy, hilly and scenic streets. It's scary and the majority of people in the Neighborhood recognize this dangerous condition. There's a strong feeling that residents must transport themselves and their loved ones in cars, in order to protect themselves. In a sense, we've become caged birds with our cars and it only exacerbates the problem.

There's a systematic practice of denying Southwest neighborhoods their due. Metro and Portland's decisions in planning priorities have deprived us of safely being able to walk our streets, which remain largely devoid of transit ways for non-motorized people. There needs to be a corrective plan in place that promotes people not their automobiles. Metro's leadership can be the major catalyst for changing these deplorable conditions. Designing, funding and constructing a SW Hills transit way, for all Portlanders to utilize, would reverse the course of past actions.

Thank you for your attention to this very sensitive issue. SW Hills Residential League and our neighbors and friends look forward to working with Metro and City transportation leaders on these proposals in the near future.

Sincerely,

Pamella E. Settlegoode, Ph.D.

Re: Support for including the Columbia Slough Trail in RTP

One of my earliest civic activities after moving to Portland in 1991 was taking a community-sponsored walk on the yet-unfinished Springwater Corridor Trail. Over the years I have seen the benefits that this tremendous transportation feature provides to the public.

Metro knows that in order to achieve a balanced transportation system it is important to include multi-use trails in the Regional Transportation Plan. Providing citizens choices other than the automobile is critical to building livable communities. I support this.

I want you to know there is strong support for regional trails in the Columbia Slough Watershed area. In June of this year, after much work, the Watershed Council completed a long awaited Watershed Action Plan. In developing this plan we interviewed business and land owners, and worked with a wide array of community members. Our job, as a Watershed Council, is to encourage the community to implement the Action Plan.

The Action Plan's highest category is called Top Priority. One of our Top Priority projects is: *Completion of the Columbia Slough Trail*. As you may know, portions of the Columbia Slough trail are finished – and if you been on the trail, you know how beautiful it is – but there are many missing links and gaps. A fully-completed trail will provide multiple benefits. For example, there are hundreds of businesses along the Slough. When it is finished I am confident workers will use the Columbia Slough trail to access jobs. There will be access from Interstate MAX, I-205 bike path, and multiple bus routes that cross or travel near the Slough.

The Columbia Slough Watershed Council urges that you add the Columbia Slough Trail to the RTP's financially constrained list. We support this action.

*A feasibility study*  
Thank you very much.

**Subject: TPlan 2000 update comments to go into record. Request for response.**

**Date:** Monday, December 8, 2003 8:01 PM

**From:** Roger M. Ellingson <rogere@rmegen.net>

**To:** Trans System Accounts trans@metro.dst.or.us

Hello,

I am writing to be put on the record for the 2000 transportation plan update review. I am concerned that the regional transportation plan is not taking into account the increased levels of transportation system noise pollution around the metro area and the impact this is having on regional livability.

I have measured the traffic noise pollution levels at my home which is located in a residential area adjacent to SW Barnes Road. The levels exceed the 66-67dBA State of Oregon and Federal guidelines for this type of developed area 50% of the time. 10% of the time the noise levels are twice the standards. The noise peaks due to unmuffled vehicle exhaust routinely exceed 100dBA SPL! All measurements are taken in a position recommended by a Ph.D. noise expert. These problems I have at my home are not unique to the Metro area.

The main noise generators I have observed are 1) unmuffled heavy trucks routinely using illegal exhaust/compression system brakes, 2) increased tire and engine noise due to increasing vehicle speeds both legal and above the legal limit, 3) heavy increases in the number of illegally muffled Harley-davidson motorcycles being operated, 4) huge increases in the number of modified "performance" resonator type exhaust vehicles being driven, 5) poor education, general confusion, and lack of will at the local jurisdiction levels to enforce what few vehicle noise emission laws are currently in force.

According to FHWA documents the main contributors to vehicle noise pollution are medium and heavy trucks. All transportation system planning is based upon these estimates. But the problem with metro and local transportation planning is the lack of enforcement of federal and state motor vehicle noise emission laws. If the laws are not enforced, then transportation system planning does not work either. There needs to be a balance to the overall system. Sound transportation system planning must be based upon sound foundational principles.

Upon further investigation, I and others have found there is no coordination between jurisdictions across the Metro area regarding noise pollution. Some cities have recently updated noise ordinances, but other areas like Washington County where I live have consciously avoided addressing the noise pollution levels from associated traffic impacts for decades. To our knowledge, Metro does not have any policy, knowledge, or understanding of the noise pollution impacts of the transportation system either.

I request that Metro review the current planning being undertaken to account for the items I have pointed out in this letter. I will be looking forward to hearing exactly how Metro and the Joint commission will be addressing this regional livability deficiency and how I can help.

Thank you for responding to this request.

Sincerely yours,

Roger M. Ellingson

MEMORANDUM

TO: Kim Ellis  
Metro

FROM: Ed Abrahamson *EA*  
Principal Planner

RE: Corrections to Regional Transportation Plan (RTP) Project List

A review of 2004 RTP Project Update document revealed a number of Multnomah County projects that required corrections, as follows:

- #2041—257<sup>th</sup> Ave., Division St. to Powell Valley Rd.: Project is included in the Financially Constrained List but was left off the Table 1 summary list.
- #2120—Sandy Blvd. Bike/Ped project: Remove project from Table 1 and RTP
- #2124—Halsey St., 238<sup>th</sup> Ave. to Historic Columbia River Highway: Project is included in the Financially Constrained List but was omitted from Table 1 summary list. Project cost should be changed to \$3,240,000.

If you have any questions or require additional information, please call me at (503) 988-5050 x29620.

**Subject: RTP Amendment Request**

Kim: As we discussed on the phone, we want to withdraw our request of Nov. 12 to move project #1199 - Barbur Blvd. Pedestrian Access to Transit Improvements from the Financially Constrained system to the Preferred system. Unlike other larger scale projects planned along the I-5/Barbur corridor, this project is smaller in scope, more flexible in design regarding adjacent land uses and helps implement the Barbur Boulevard Streetscape Plan. These projects are not dependent upon recommendations that may result from the Regional Corridor Planning Program for the I-5/Barbur corridor. Please retain this project in the Financially Constrained system and advance it to the 2004-2009 timeframe.

Subject: Comments on RTP 2004 12/10/2003

December 10, 2003 4:15 pm.

I have the following comments on the RTP 10/31/2004 draft as it relates to SW Portland. The numbers refer to the Project List #.

First of all, please pass a resolution requiring each member city to adopt the amendments to the RTP after a suitable previously announced comment period to permit the citizens of each of these cities an opportunity to comment and make their views known. The current game rules make it an insiders game and not what we the citizens need or want.

1095 Barbur Blvd multi-modal improvements 15,000,000. This project was promised to SW Portland in lieu of having much of it done by ODOT when Barbur was re paved in 1999. We were promised it would be receive funding priority. That promise should be kept. The Barbur Corridor Study is desired to identify the new southbound on-ramp prior to Capitol Highway South, and the changes needed at Capitol Highway and Barbur.

1193 could be put off for a few years until 1096 the I-5 Barbur 405-217 Corridor is complete. It is my understanding that 1096 is in the financially constrained alternative. If it is not, it needs to be made a part of the constrained system. It is key to many changes in SW Portland.

Cannot find: Earthquake retrofitting for the bridge on Capitol Highway over SW Bertha Blvd, repairs or replacement to Vermont and Newberry Structures (Bridges) on Barbur just south of the north connection with I-5. They should be in the plan.

North MacAdam: A huge pile of money is proposed for this area including Naito Parkway, connections to the Ross Island Bridge, etc. No attention has been paid to the direct connections to I-405, I-5 while much attention has been directed to getting the spaghetti out of the east end of the Ross Island Bridge. The direct connections to the freeways are the logical next steps in implementing the North MacAdam plan, not messing around with the traffic that will not be there when the direct connections are completed. Make this project a top priority, taking funds from all the other projects designed to enhance North MacAdam.

Pedestrian bridge over I-5 and adjacent streets associated with the North MacAdam project should be specified as such to make sure the funds are not diverted to another project. I understand it is a \$5,000,000 or so project.

2004 RTP UPDATE

# Summary of Recommendations on Public Comments Received

December 5 – December 10, 2003

## Consent Items

### PACKET 1 – POLICY UPDATE

No additional comments received.

### PACKET 2 – PROJECT UPDATE

Comment 131: Add Project #2041 (257th Avenue improvements) to the Table 1 summary of financially constrained system changes. Project is included in the Oct. 31, 2003 financially constrained project list, but is not shown on Table 1. (Multnomah County, 12/09/03)

Staff Recommendation: Agree. Amend as requested.

Comment 132: Add Project #2124 (Halsey St. improvements) to the Table 1 summary of financially constrained system changes. Project is included in the Oct. 31, 2003 financially constrained project list, but is not shown on Table 1. Update project cost to be \$3,240,000. (Multnomah County, 12/09/03)

Staff Recommendation: Agree. Amend as requested.

Comment 133: Delete Project #2120 (Sandy Boulevard improvements) from the Table 1 summary of financially constrained system changes. This project is not included in the Oct. 31, 2003 financially constrained project list, but is shown on Table 1. (Multnomah County, 12/09/03)

Staff Recommendation: Agree. Amend as requested.

Comment 134: Withdraw request of November 12, 2003 (Comment #38) to remove Project #1199 - Barbur Boulevard Pedestrian Access to Transit Improvements from the Financially Constrained System. Unlike other larger scale projects planned along the I-5/Barbur corridor, this project is smaller in scope, more flexible in design regarding adjacent land uses and helps implement the Barbur Boulevard Streetscape Plan. These projects are not dependent upon recommendations that may result from the Regional Corridor Planning

Program for the I-5/Barbur corridor. Retain this project in the Financially Constrained system and advance it to the 2004-2009 timeframe. (City of Portland, 12/10/03)

Staff Recommendation: Agree. Amend as requested.

Comment: 135: Project #1095 (Barbur Blvd multi-modal improvements). This project was promised to SW Portland in lieu of having much of it done by ODOT when Barbur was repaved in 1999. That promise should be kept. The Barbur Corridor Study is desired to identify the new southbound on-ramp prior to Capitol Highway South, and the changes needed at Capitol Highway and Barbur. (Don Baack, 12/10/03)

Staff Recommendation: See Recommendation in Comment #134. This project will be included in the financially constrained system.

Comment 136: Project #1193 could be put off for a few years until 1096 the I-5 Barbur 405-217 Corridor is complete. It is my understanding that 1096 is in the financially constrained alternative. If it is not, it needs to be made a part of the constrained system. It is key to many changes in SW Portland. (Don Baack, 12/10/03)

Staff Recommendation: No change recommended. Project #1096 is not in the financially constrained. Other corridors have been identified as higher priorities at this time.

Comment 137: Add a project to complete earthquake retrofitting for the bridge on Capitol Highway over SW Bertha Blvd, repairs or replacement to Vermont and Newberry Structures (Bridges) on Barbur just south of the north connection with I-5. (Don Baack, 12/10/03)

Staff Recommendation: See TPAC Recommendation to Comment 125.

Comment 138: A lot of money is proposed for the North Macadam area including Naito Parkway, connections to the Ross Island Bridge, etc. No attention has been paid to the direct connections to I-405, I-5 while much attention has been directed to getting the spaghetti out of the east end of the Ross Island Bridge. The direct connections to the freeways are the logical next steps in implementing the North Macadam plan, not messing around with the traffic that will not be there when the direct connections are completed. Make this project a top priority, taking funds from all the other projects designed to enhance North Macadam. (Don Baack, 12/10/03)

Staff Recommendation: See TPAC Recommendation to Comment 124.

Comment 139: Pedestrian bridge over I-5 and adjacent streets associated with the North Macadam project should be specified as such to make sure the funds are not diverted to another project. I understand it is a \$5,000,000 or so project. (Don Baack, 12/10/03)

Staff Recommendation: No change recommended. Project #1200 is not proposed to be included in the financially constrained at this time. Other priority projects have been included for this area.

## PACKET 3 – TECHNICAL UPDATE

*2004 RTP Update*

*Summary of Recommendations on Public Comments Received: December 5, 2003 – December 10, 2003*

Comment 140: Do not make changes recommended in Section 6.2 (Demonstration of Compliance with State Requirements) based on TPAC recommendation in Comment #1, and provide clarifying language in introduction and Section 6.1 (Demonstration of Compliance with Federal Requirements) that this update will only address federal planning requirements. (Metro staff, 12/10/03)

Staff Recommendation: Agree. Amend as requested.

## OTHER

Comment 141: The RTP update has not adequately addressed increased levels of noise pollution due to transportation. The main noise generators I have observed are 1) unmuffled heavy trucks routinely using illegal exhaust/compression system brakes, 2) increased tire and engine noise due to increasing vehicle speeds both legal and above the legal limit, 3) heavy increases in the number of illegally muffled Harley-davidson motorcycles being operated, 4) huge increases in the number of modified "performance" resonator type exhaust vehicles being driven, 5) poor education, general confusion, and lack of will at the local jurisdiction levels to enforce what few vehicle noise emission laws are currently in force. The lack of enforcement of federal and state motor vehicle noise emission laws is the main problem with regional and local planning. (Roger Elligsen, 12/8/03)

Staff Recommendation: No change recommended. Noise ordinances are regulated and monitored locally. This comment will be forwarded to local governments.

## STAFF REPORT

### IN CONSIDERATION OF RESOLUTION NO. 03-3380A, FOR THE PURPOSE OF ADOPTING THE 2004 REGIONAL TRANSPORTATION PLAN AS THE FEDERAL METROPOLITAN TRANSPORTATION PLAN TO MEET FEDERAL PLANNING REQUIREMENTS

---

Date: December 10, 2003

Prepared by: Kim Ellis

#### PROPOSED ACTION

This resolution would adopt the 2004 Federal update to the Regional Transportation Plan (“Federal RTP”) as the federal metropolitan transportation plan and would bring the RTP into compliance with the Clean Air Act and federal planning requirements, pending approval of Resolution No. 03-3382 (the 2004 RTP/2004-07 MTIP Air Quality Conformity Determination). Metro is not required to update the regional transportation plan for state planning purposes until 2007.

The Federal RTP, included as Exhibit “A,” contains:

- Policy Packet (Part 1) – Chapter 1 of the Regional Transportation Plan (RTP) presents the overall policy framework for specific transportation policies, objectives and actions identified throughout this plan. It also sets a direction for future planning and decision-making by the Metro Council and the implementing agencies, counties and cities.

The Policy Packet includes the proposed policy amendments for the Federal RTP, which includes changes to several transportation system maps in Chapter 1 and changes to Chapter 1 policy text to establish two tiers of industrial areas (“regionally significant” and “local”) for the purpose of transportation planning and funding. The updated system maps include a number of “housekeeping” amendments that reflect fine-tuning of the various modal system maps. Many of these amendments were recommended by local cities and counties as part of local transportation plans adopted since the last RTP update in August 2000. In addition, a new map that identifies the Metropolitan Planning Organization (MPO) Planning Boundary is proposed to be added to Chapter 1 of the RTP. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes.

- Project Packet (Part 2) - The Project Packet includes an updated Financially Constrained System that will be eligible for state and federal funding and a larger “Illustrative System” that identifies the 20-year transportation needs for the region. As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. This packet incorporates new projects recommended in local transportation plans or corridor studies adopted since 2000 and endorsed by Metro as “friendly amendments” as part of the local review process. The updated financially constrained system is required for federal planning purposes, serves as the basis for a conformity determination with the federal Clean Air Act that will be addressed through a separate Resolution No. 03-3382. Projects that have been added to the Federal RTP and that are not included in the 2000 RTP priority system would require compliance with statewide planning goals through a separate amendment to the 2000 RTP Priority System prior to construction,
- Technical Packet (Part 3) - The Technical Packet incorporates technical changes to the Chapter 6 of the RTP that delete technical requirements that have been addressed through recently adopted

corridor studies and frame future work that must still be completed as part of future updates to the Federal RTP.

### EXISTING LAW

Metro is required to complete a periodic update of the Regional Transportation Plan (RTP) in order to maintain continued compliance with the federal Clean Air Act. The U.S. Department of Transportation (DOT) and the U.S. Environmental Protection Agency (EPA) approved and acknowledged the 2000 RTP air quality conformity determination on January 26, 2001. Under federal regulations, the RTP must be updated every three years to ensure that the plan adequately addresses future travel needs and is consistent with the federal Clean Air Act. As a result, a new plan demonstrating conformity with the Clean Air Act must be approved and acknowledged by US DOT and US EPA in a formal conformity determination by January 26, 2004, when the current US DOT/US EPA conformity determination for the 2000 RTP expires. If the conformity determination expires, the plan is considered to “lapse,” meaning that federally-funded transportation improvements could not be obligated during the lapse period. This consequence would apply to engineering, right-of-way acquisition or construction of any federally funded or permitted transportation project, except those defined as exempt because they do not have the possibility of increasing vehicle emissions.

Because the 2000 RTP was the result of a major update and was completed relatively recently, the Federal update to the RTP represents a minor effort that was limited to meeting state and federal requirements, and incorporating new policy direction set by Joint Policy Advisory Committee on Transportation (JPACT) and the Metro Council as part of various corridor and special studies adopted since 2000. The update also incorporated a number of “friendly amendments” proposed as part of local transportation plans adopted since 2000.

In addition, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Area Boundary. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes. The boundary includes the area inside Metro's jurisdictional boundary, the urban growth boundary and the 2000 census defined urbanized area boundary for the Portland metropolitan region. A new map has been added to chapter 1 of the RTP to meet this requirement.

### FACTUAL BACKGROUND AND ANALYSIS

The most pressing need for this update to the RTP is continued compliance with the federal Clean Air Act. Most of the federal requirements only required minor revisions to the RTP in order to maintain compliance. The more involved efforts involve the requirement for a “financially constrained” plan and demonstration of conformity with the federal Clean Air Act. The conformity finding is based on the projects that make up the “financially constrained” plan. The financial constraint exercise consists of developing a projection of reasonably expected transportation funding over the 20-year plan period, and selecting a subset of projects from the plan that fit within this “constraint.” The financially constrained system of projects is then evaluated to determine whether implementation of the projects would violate the federal Clean Air Act.

In October 2003, Metro staff worked with members of the Transportation Policy Alternatives Committee (TPAC) and other interested parties to develop a comprehensive inventory of regional transportation projects identified in local plans and special studies adopted since the 2000 RTP was completed in order to update the 2000 RTP project list. This inventory included:

- new projects or studies that are not currently in the 2000 Regional Transportation Plan, but that have been adopted in local transportation system plans (TSPs) and regional corridor studies through a public process
- updates to existing 2000 RTP projects or studies to reflect changes in project location, description, cost and recommended timing

Nearly all city and county transportation plans in the Metro region have been updated during the past three years to be consistent with the 2000 RTP. In the process of completing these updates, many local plans identified new transportation projects of regional significance that are proposed as part of the draft Federal RTP as amendments. Some corridor studies that have been completed (or are nearing completion) since the last RTP update in August 2000 have been endorsed by resolution with the expectation that the new projects generated by these studies would be incorporated into the current RTP update. This includes the Powell/Foster Corridor Study, Phase 1.

Finally, the Pleasant Valley Concept Plan, Powell Boulevard Streetscape Study and the McLoughlin Boulevard Enhancement Plan were completed in 2003 with the expectation that new projects generated by these local planning efforts would be incorporated into the Federal RTP. The recommendations endorsed in each of these efforts are also reflected Federal RTP.

The updated “Illustrative System” of projects served as the basis for defining an updated financially constrained system of improvements that represents a subset of roughly half of the Illustrative system. Development of the financially constrained system followed the basic principles of (a) maintaining the Region 2040 Plan policy emphasis of the 2000 RTP by focusing improvements in areas that serve as the economic engines for the region, including centers, ports and industrial areas, and (b) maintaining a similar project balance among travel modes, including roads, transit, bikeways, pedestrian improvements and other project categories.

The Federal RTP provides an updated set of financially constrained projects and programs for future MTIP allocations and is anticipated to meet the federal clean air act. As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. The MTIP allocates federal funds in the region, and is updated every two years, and includes a rolling, four-year program of transportation improvements.

### ***Technical Considerations***

Because of the inherent time and resource constraints, a single round of modeling and analysis was utilized for this update. The principal purpose for this approach was to complete the federal air quality conformity analysis required to demonstrate that the updated plan is consistent with the region’s air quality maintenance plan.

To achieve this, the Federal RTP update combined the preferred and priority systems contained in the 2000 RTP as a single “Illustrative” system that established the universe of projects eligible for inclusion in the financially constrained system that is eligible for federal funding. Exceptions to this guideline were local and regional projects identified in corridor refinements and local transportation plans since the 2000 RTP was adopted. This approach focused TPAC’s activities on defining the financially constrained system, and was based on the assumption that the combination of “Illustrative” system projects from the existing plan, and new projects from subsequent studies, will be adequate to meet travel demand in the new 2025 horizon year.

The Federal RTP did not include an iterative process of multiple rounds of modeling to test new projects against the congestion management system and other RTP performance measures.

In addition to updating transportation projects and growth forecasts, Metro must demonstrate that the Federal RTP meets federal and state air quality analysis requirements. During November and December, Metro completed a technical analysis known as air quality conformity.

The results of the Federal RTP update work tasks are included in the 2004 Regional Transportation Plan Public Comment document, which is included as Exhibit "A" (Parts 1, 2 and 3). A public comment period was held from October 31, 2003 through December 10, 2003. The Metro Council held a public hearing on Dec. 4, 2003. Exhibit "B" includes a "Summary of Public Comments: Receive October 31, 2003 through December 4, 2003," dated December 5, 2003. Exhibit "C" includes a "Supplemental Public Comments: Received December 5, 2003 through December 10, 2003," dated December 11, 2003.

The Metro Council is being asked to approve Exhibit A as amended by Exhibit "B" and "C" and direct this resolution, the updated Federal RTP and Resolution 03-3382 upon its adoption by the Metro Council be submitted to the U.S. Department of Transportation and the U.S. Environmental Protection Agency prior to January 26, 2004 for review for acknowledgement that these documents conform with the requirements of the Clean Air Act.

## **ANALYSIS/INFORMATION**

### **1. Known Opposition**

None known. The region is and has been in compliance with the Clean Air Act since 1996. The Federal RTP financially constrained system of transportation improvements is anticipated to meet federal clean air act requirements.

### **2. Legal Antecedents**

There are a wide variety of past Federal, State and regional legal actions that apply to this action.

Federal regulations include:

- the Clean Air Act, as amended [42 U.S. C. 7401, especially section 176(c)]; and
- Federal statutes concerning air quality conformity [23 U.S.C. 109(j)];
- US EPA transportation conformity rules (40 CFR, parts 51 and 93)
- USDOT rules that require Metro to update RTPs on a three-year cycle [23 CFR 450.322(a)].

State regulations include:

- Oregon Administrative Rules for Transportation Conformity, (OAR Chapter 340, Division 252);
- Portland Area Carbon Monoxide Maintenance Plan and Portland Area Ozone Maintenance Plan each prepared in 1996 and which received Federal approvals on September 2, 1997 and May 19, 1997 respectively.

Previous related Metro Council actions include:

- Metro Resolution No. 00-2969, adopting the air quality conformity for the 2000 RTP;
- Metro Resolution No. 02-3186A, amending the 2000 RTP and 2002 MTIP to incorporate OTIA bond projects;
- Metro Ordinance 03-1007A, amending the 2000 RTP to incorporate the two phases of the South Corridor Study

- Metro Resolution 03-3351, amending the 2000 RTP and MTIP to incorporate the South Corridor LRT Project (again, using a less than full analysis method to assess air quality impacts from the project when added to the RTP and MTIP).

### **3. Anticipated Effects**

Approval of this Resolution will allow submittal of the Federal RTP as set forth in Exhibit A and amended by Exhibit “B” and Exhibit “C” to the U.S. Department of Transportation (Federal Highway Administration and Federal Transit Administration) as well as the U.S. Environmental Protection Agency for their review and hopefully, acknowledgement by U.S. DOT and U.S. EPA in a formal conformity determination that the Federal RTP complies with the federal Clean Air Act and federal planning requirements. This approval will allow Metro and local, regional and state agencies to proceed with transportation investments within the region.

### **4. Budget Impacts**

None. The subject transportation investments are allocations of Federal and State transportation funds.

### **RECOMMENDED ACTION**

Adopt Resolution 03-3380.

## STAFF REPORT

IN CONSIDERATION OF RESOLUTION NO. 03-3380<sup>A</sup>, FOR THE PURPOSE OF ADOPTING THE 2004 REGIONAL TRANSPORTATION PLAN AS THE FEDERAL METROPOLITAN TRANSPORTATION PLAN TO MEET FEDERAL PLANNING REQUIREMENTS

---

Date: ~~November 6, 2003~~December 10, 2003  
Ellis

Prepared by: Kim

### PROPOSED ACTION

This resolution would adopt the 2004 Federal update to the Regional Transportation Plan (“Federal RTP”) as the federal metropolitan transportation plan and would bring the RTP into compliance with the Clean Air Act and federal planning requirements, pending approval of Resolution No. 03-3382 (the 2004 RTP/2004-07 MTIP Air Quality Conformity Determination). Metro is not required to update the regional transportation plan for state planning purposes until 2007.

The 2004-Federal RTP, included as Exhibit “A,” includes/contains:

- RTP Policies/Policy Packet (Part 1) – Chapter 1 of the Regional Transportation Plan (RTP) presents the overall policy framework for specific transportation policies, objectives and actions identified throughout this plan. It also sets a direction for future planning and decision-making by the Metro Council and the implementing agencies, counties and cities.

The Policy Packet includes ~~The~~ proposed policy amendments for the 2004-Federal RTP, Regional Transportation Plan which includes are limited to changes to several transportation system map changes in Chapter 1 and changes to Chapter 1 policy text to establish two tiers of industrial areas (“regionally significant” and “local”) for the purpose of transportation planning and funding. ~~No changes to Chapter 1 policy text are proposed as part of this update.~~ The updated system maps include a number of “housekeeping” amendments that reflect fine-tuning of the various modal system maps. Many of these amendments were recommended by local cities and counties as part of local transportation plans adopted since the last RTP update in August 2000. In addition, a new map that identifies the Metropolitan Planning Organization (MPO) Planning Boundary is proposed to be added to Chapter 1 of the RTP. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes.

- RTP Projects and Systems Analysis/Project Packet (Part 2) - Chapters 2 through 5 of the The Project Packet RTP includes an updated Financially Constrained System that will be eligible for state and federal funding and a larger “Illustrative System” that identifies the 20-year transportation needs for the region, detail the scope and nature of proposed improvements that address the 20-year needs and a financial plan for implementing the recommended projects. ~~The chapters have been updated to~~ As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. This packet incorporates new projects amendments recommended in local transportation plans or corridor studies adopted since 2000 and endorsed by Metro as “friendly amendments” as part of the local review process, and technical or factual updates to the plan text that reflect updated population, employment and other empirical data needed to establish a new planning horizon year of 2025. Chapter 5 also includes a description of the The updated financially constrained system, which is required for federal certification/planning purposes, and serves as the basis for a conformity determination with the federal Clean Air Act that will be addressed through a separate Resolution No.

03-3382. Projects that have been added to the Federal RTP and that are not included in the 2000 RTP priority system would require compliance with statewide planning goals through a separate amendment to the 2000 RTP Priority System prior to construction.

- RTP Implementation Technical Packet (Part 3) - Chapter 6 of the RTP establishes regional compliance with state and federal planning requirements, and sets requirements for city and county compliance with the RTP. This chapter also establishes criteria for amending the RTP project lists, and the relationship between the RTP and the Metro Transportation Improvement Program (MTIP). Chapter 6 also identifies future studies needed to refine the RTP as part of future updates. The Technical Packet incorporates technical changes to the Chapter 6 of the RTP that delete technical requirements that have been addressed through recently adopted corridor studies and frame future work that must still be completed as part of future updates to the Federal RTP.

## EXISTING LAW

Metro is required to complete a periodic update of the Regional Transportation Plan (RTP) in order to maintain continued compliance with the federal Clean Air Act. The U.S. Department of Transportation (DOT) and the U.S. Environmental Protection Agency (EPA) approved and acknowledged the 2000 RTP air quality conformity determination on January 26, 2001. Under federal regulations, the RTP must be updated every three years to ensure that the plan adequately addresses future travel needs and is consistent with the federal Clean Air Act. As a result, a new plan demonstrating conformity with the Clean Air Act must approved and acknowledged by US DOT and US EPA in a formal conformity determination by January 26, 2004, when the current US DOT/US EPA conformity determination for the 2000 RTP expires. If the conformity determination expires, the plan is considered to “lapse,” meaning that federally-funded transportation improvements could not be obligated during the lapse period. This consequence would apply to engineering, right-of-way acquisition or construction of any federally funded or permitted transportation project, except those defined as exempt because they do not have the possibility of increasing vehicle emissions.

Because the 2000 RTP was the result of a major update and was completed relatively recently, the 2004 Federal update to the RTP represents a minor effort that was limited to meeting state and federal requirements, and incorporating new policy direction set by Joint Policy Advisory Committee on Transportation (JPACT) and the Metro Council as part of various corridor and special studies adopted since 2000. The update also incorporated a number of “friendly amendments” proposed as part of local transportation plans adopted since 2000.

In addition, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Area Boundary. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes. The boundary includes the area inside Metro's jurisdictional boundary, the urban growth boundary and the 2000 census defined urbanized area boundary for the Portland metropolitan region. A new map has been added to chapter 1 of the RTP to meet this requirement.

## FACTUAL BACKGROUND AND ANALYSIS

The most pressing need for this update to the RTP is continued compliance with the federal Clean Air Act. Most of the federal requirements only required minor revisions to the RTP in order to maintain compliance. The more involved efforts involve the requirement for a “financially constrained” plan and demonstration of conformity with the federal Clean Air Act. The conformity finding is based on the projects that make up the “financially constrained” plan. The financial constraint exercise consists of developing a projection of reasonably expected transportation funding over the 20-year plan period, and

selecting a subset of projects from the plan that fit within this “constraint.” The financially constrained system of projects is then evaluated to determine whether implementation of the projects would violate the federal Clean Air Act.

In October 2003, Metro staff worked with members of the Transportation Policy Alternatives Committee (TPAC) and other interested parties to develop a comprehensive inventory of regional transportation projects identified in local plans and special studies adopted since the 2000 RTP was completed in order to update the 2000 RTP project list. This inventory included:

- new projects or studies that are not currently in the 2000 Regional Transportation Plan, but that have been adopted in local transportation system plans (TSPs) and regional corridor studies through a public process
- updates to existing 2000 RTP projects or studies to reflect changes in project location, description, cost and recommended timing

Nearly all city and county transportation plans in the Metro region have been updated during the past three years to be consistent with the 2000 RTP. In the process of completing these updates, many local plans identified new transportation projects of regional significance that are proposed as part of the draft [2004 Federal RTP](#) as amendments. Some corridor studies that have been completed (or are nearing completion) since the last RTP update in August 2000 have been endorsed by resolution with the expectation that the new projects generated by these studies would be incorporated into the current RTP update. This includes the Powell/Foster Corridor Study, Phase 1.

Finally, the Pleasant Valley Concept Plan, Powell Boulevard Streetscape Study and the McLoughlin Boulevard Enhancement Plan were completed in 2003 with the expectation that new projects generated by these local planning efforts would be incorporated into the [2004-Federal RTP](#). The recommendations endorsed in each of these efforts are also reflected [2004-Federal RTP](#).

The updated ~~preferred~~ “[Illustrative sSystem](#)” of projects served as the basis for defining an updated financially constrained system of improvements that represents a subset of roughly half of the ~~preferred~~ [Illustrative](#) system. Development of the financially constrained system followed the basic principles of (a) maintaining the Region 2040 Plan policy emphasis of the 2000 RTP by focusing improvements in areas that serve as the economic engines for the region, including centers, ports and industrial areas, and (b) maintaining a similar project balance among travel modes, including roads, transit, bikeways, pedestrian improvements and other project categories.

The [2004-Federal RTPRegional-Transportation-Plan](#) provides an updated set of financially constrained projects and programs for future MTIP allocations and is anticipated to meet the federal clean air act. As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. The MTIP allocates federal funds in the region, and is updated every two years, and includes a rolling, four-year program of transportation improvements.

### ***Technical Considerations***

Because of the inherent time and resource constraints, a single round of modeling and analysis was utilized for this update. The principal purpose for this approach was to complete the federal air quality conformity analysis required to demonstrate that the updated plan is consistent with the region’s air quality maintenance plan.

To achieve this, the 2004 Federal RTP update combined the preferred and priority systems contained in the 2000 RTP as a single ~~preferred~~ “Illustrative” system that established the universe of projects eligible for inclusion in the financially constrained system that is eligible for federal funding. Exceptions to this guideline were local and regional projects identified in corridor refinements and local transportation plans since the 2000 RTP was adopted. This approach focused TPAC’s activities on defining the financially constrained system, and was based on the assumption that the combination of ~~preferred~~ “Illustrative” system projects from the existing plan, and new projects from subsequent studies, will be adequate to meet travel demand in the new 2025 horizon year.

~~As part of documenting findings from this limited RTP modeling exercise, staff reviewed and updated system performance conclusions from the 2000 RTP, as appropriate, to reflect the new preferred and financially constrained systems. The 2004 Federal RTP Update did not include an iterative process of multiple rounds of modeling to test new projects against the congestion management system and other RTP performance measures, since the new preferred system of improvements is expected to perform adequately. Any outstanding issues that were identified are referenced for future corridor or area studies.~~

In addition to updating transportation projects and growth forecasts, Metro must demonstrate that the 2004 Federal RTP meets federal and state air quality analysis requirements. During November and December, Metro completed a technical analysis known as air quality conformity.

The results of the 2004 Federal RTP update work tasks are included in the 2004 Regional Transportation Plan Public Comment document, which is included as Exhibit "A-" (Parts 1, 2 and 3). A ~~30-day~~ public comment period was held from October 31, 2003 through December 4~~10~~, 2003. The Metro Council held a public hearing on Dec. 4, 2003. Exhibit “B” includes a “Summary of Public Comments: Receive October 31, 2003 through December 4, 2003,” dated December 5, 2003. Exhibit “C” includes a “Supplemental Public Comments: Received December 5, 2003 through December 10, 2003,” dated December 11, 2003.

The Metro Council is being asked to approve Exhibit A as amended by Exhibit “B” and “C” this work and direct that a request be this resolution, the updated Federal RTP and Resolution 03-3382 upon its adoption by the Metro Council be submitted for to the U.S. Department of Transportation and the U.S. Environmental Protection Agency prior to January 26, 2004 for review and for acknowledgement that these documents conform with the requirements of the Clean Air Act of the 2004 RTP Conformity Determination.

## ANALYSIS/INFORMATION

### 1. Known Opposition

None known. The region is and has been in compliance with the Clean Air Act since 1996. The 2004 Federal RTP financially constrained system of transportation improvements is anticipated to meet federal clean air act requirements.

### 2. Legal Antecedents

There are a wide variety of past Federal, State and regional legal actions that apply to this action.

Federal regulations include:

- the Clean Air Act, as amended [42 U.S. C. 7401, especially section 176(c)]; and
- Federal statutes concerning air quality conformity [23 U.S.C. 109(j)];
- US EPA transportation conformity rules (40 CFR, parts 51 and 93)
- USDOT rules that require Metro to update RTPs on a three-year cycle [23 CFR 450.322(a)].

State regulations include:

- Oregon Administrative Rules for Transportation Conformity, (OAR Chapter 340, Division 252);
- Portland Area Carbon Monoxide Maintenance Plan and Portland Area Ozone Maintenance Plan each prepared in 1996 and which received Federal approvals on September 2, 1997 and May 19, 1997 respectively.

Previous related Metro Council actions include:

- Metro Resolution No. 00-2969, adopting the air quality conformity for the 2000 RTP;
- Metro Resolution No. 02-3186A, amending the 2000 RTP and 2002 MTIP to incorporate OTIA bond projects;
- Metro Ordinance 03-1007A, amending the 2000 RTP to incorporate the two phases of the South Corridor Study
- Metro Resolution 03-3351, amending the 2000 RTP and MTIP to incorporate the South Corridor LRT Project ( again, using a less than full analysis method to assess air quality impacts from the project when added to the RTP and MTIP).

### **3. Anticipated Effects**

Approval of this Resolution will allow submittal of the [2004-Federal RTP](#) as set forth in Exhibit A [and amended by Exhibit "B" and Exhibit "C"](#) to the U.S. Department of Transportation- (Federal Highway Administration and Federal Transit Administration) as well as the U.S. Environmental Protection Agency for their review and hopefully, acknowledgement by U.S. DOT and U.S. EPA in a formal conformity determination that the [2004-Federal RTP](#) complies with the federal Clean Air Act and federal planning requirements. This approval will allow Metro and local, regional and state agencies to proceed with transportation investments within the region.

### **4. Budget Impacts**

None. The subject transportation investments are allocations of Federal and State transportation funds.

## **RECOMMENDED ACTION**

Adopt Resolution 03-3380.

BEFORE THE METRO COUNCIL

FOR THE PURPOSE OF DESIGNATION OF ) RESOLUTION NO. 03-3380  
THE 2004 REGIONAL TRANSPORTATION )  
PLAN AS THE FEDERAL METROPOLITAN )  
TRANSPORTATION PLAN TO MEET ) Introduced by Councilor Park  
FEDERAL PLANNING REQUIREMENTS )

WHEREAS, federal law requires Metro to demonstrate every three years that its Regional Transportation Plan (“RTP”) conforms to the Clean Air Act; and

WHEREAS, the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency last found the RTP to conform to the requirements of the Clean Air Act on January 26, 2001; and

WHEREAS, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Boundary; and

WHEREAS, a post-adoption air quality analysis must demonstrate conformity with the federal Clean Air Act for continued federal certification; and

WHEREAS, the Metro Council has received and considered the advice of its Joint Policy Advisory Committee on Transportation and its Metro Policy Advisory Committee, and all proposed amendments identified in Exhibit “A” have been the subject of a 30-day public review period; and

WHEREAS, the Council held a public hearing on the 2004 RTP on December 11, 2003; now therefore,

BE IT RESOLVED that the Metro Council:

1. The 2004 Regional Transportation Plan (“RTP”), adopted by the Council in Ordinance No. 03-1024, shall be the federal Metropolitan Transportation Plan
2. The map in Part 1 (Policy Update) of the 2004 Regional Transportation Plan Update, adopted by the Council in Ordinance No. 03-1024, shall be the Metropolitan Planning Organization Planning Area Boundary for purposes of the federal Metropolitan Transportation Plan.

3. The Chief Operating Officer shall submit this resolution and the 2004 RTP and the 2004 RTP/2004-07 MTIP Air Quality Conformity Determination as set forth in Part 4 (Air Quality Conformity) of Exhibit A to the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency for review for acknowledgement that these documents conform with the requirements of the Clean Air Act prior to January 26, 2004.

4. The Findings of Compliance in Exhibit B, attached and incorporated into this resolution, explain how the 2004 RTP conforms to the requirements of the Clean Air Act and federal planning requirements.

ADOPTED by the Metro Council this \_\_\_\_ day of December 2003.

---

David Bragdon, Council President

Approved as to Form:

---

Daniel B. Cooper, Metro Attorney

## STAFF REPORT

### IN CONSIDERATION OF RESOLUTION NO. 03-3380, FOR THE PURPOSE OF DESIGNATION OF THE 2004 REGIONAL TRANSPORTATION PLAN AS THE FEDERAL METROPOLITAN TRANSPORTATION PLAN TO MEET FEDERAL PLANNING REQUIREMENTS

---

Date: November 6, 2003

Prepared by: Kim Ellis

#### PROPOSED ACTION

This resolution would adopt the 2004 Regional Transportation Plan (RTP) as the federal metropolitan transportation plan and would bring the RTP into compliance with the Clean Air Act and federal planning requirements. The 2004 RTP includes:

- RTP Policies – Chapter 1 of the Regional Transportation Plan (RTP) presents the overall policy framework for specific transportation policies, objectives and actions identified throughout this plan. It also sets a direction for future planning and decision-making by the Metro Council and the implementing agencies, counties and cities.

The proposed policy amendments for the 2004 Regional Transportation Plan are limited to several transportation system map changes in Chapter 1. No changes to Chapter 1 policy text are proposed as part of this update. The updated system maps include a number of "housekeeping" amendments that reflect fine-tuning of the various modal system maps. Many of these amendments were recommended by local cities and counties as part of local transportation plans adopted since the last RTP update in August 2000. In addition, a new map that identifies the Metropolitan Planning Organization (MPO) Planning Boundary is proposed to be added to Chapter 1 of the RTP. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes.

- RTP Projects and Systems Analysis - Chapters 2 through 5 of the RTP identify the 20-year transportation needs for the region, detail the scope and nature of proposed improvements that address the 20-year needs and a financial plan for implementing the recommended projects. The chapters have been updated to incorporate project amendments recommended in local transportation plans adopted since 2000 and endorsed by Metro as "friendly amendments" as part of the local review process and technical or factual updates to the plan text that reflect updated population, employment and other empirical data needed to establish a new planning horizon year of 2025. Chapter 5 also includes a description of the financially constrained system, which is required for federal certification, and serves as the basis for a conformity determination with the federal Clean Air Act that will be addressed through a separate Resolution No. 03-3382.
- RTP Implementation - Chapter 6 of the RTP establishes regional compliance with state and federal planning requirements, and sets requirements for city and county compliance with the RTP. This chapter also establishes criteria for amending the RTP project lists, and the relationship between the RTP and the Metro Transportation Improvement Program (MTIP). Chapter 6 also identifies future studies needed to refine the RTP as part of future updates.

#### EXISTING LAW

Metro is required to complete a periodic update of the Regional Transportation Plan (RTP) in order to maintain continued compliance with the federal Clean Air Act. The U.S. Department of Transportation (DOT) and the U.S. Environmental Protection Agency (EPA) approved and acknowledged the 2000 RTP

air quality conformity determination on January 26, 2001. Under federal regulations, the RTP must be updated every three years to ensure that the plan adequately addresses future travel needs and is consistent with the federal Clean Air Act. As a result, a new plan demonstrating conformity with the Clean Air Act must be approved and acknowledged by US DOT and US EPA in a formal conformity determination by January 26, 2004, when the current US DOT/US EPA conformity determination for the 2000 RTP expires. If the conformity determination expires, the plan is considered to “lapse,” meaning that federally-funded transportation improvements could not be obligated during the lapse period. This consequence would apply to engineering, right-of-way acquisition or construction of any federally funded or permitted transportation project, except those defined as exempt because they do not have the possibility of increasing vehicle emissions.

Because the 2000 RTP was the result of a major update and was completed relatively recently, the 2004 update represents a minor effort that was limited to meeting state and federal requirements, and incorporating new policy direction set by Joint Policy Advisory Committee on Transportation (JPACT) and the Metro Council as part of various corridor and special studies adopted since 2000. The update also incorporated a number of “friendly amendments” proposed as part of local transportation plans adopted since 2000.

In addition, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Area Boundary. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes. The boundary includes the area inside Metro's jurisdictional boundary, the urban growth boundary and the 2000 census defined urbanized area boundary for the Portland metropolitan region. A new map has been added to chapter 1 of the RTP to meet this requirement.

#### FACTUAL BACKGROUND AND ANALYSIS

The most pressing need for this update to the RTP is continued compliance with the federal Clean Air Act. Most of the federal requirements only required minor revisions to the RTP in order to maintain compliance. The more involved efforts involve the requirement for a “financially constrained” plan and demonstration of conformity with the federal Clean Air Act. The conformity finding is based on the projects that make up the “financially constrained” plan. The financial constraint exercise consists of developing a projection of reasonably expected transportation funding over the 20-year plan period, and selecting a subset of projects from the plan that fit within this “constraint.” The financially constrained system of projects is then evaluated to determine whether implementation of the projects would violate the federal Clean Air Act.

In October 2003, Metro staff worked with members of the Transportation Policy Alternatives Committee (TPAC) and other interested parties to develop a comprehensive inventory of regional transportation projects identified in local plans and special studies adopted since the 2000 RTP was completed in order to update the 2000 RTP project list. This inventory included:

- new projects or studies that are not currently in the 2000 Regional Transportation Plan, but that have been adopted in local transportation system plans (TSPs) and regional corridor studies through a public process
- updates to existing 2000 RTP projects or studies to reflect changes in project location, description, cost and recommended timing

Nearly all city and county transportation plans in the Metro region have been updated during the past three years to be consistent with the 2000 RTP. In the process of completing these updates, many local

plans identified new transportation projects of regional significance that are proposed as part of the draft 2004 RTP as amendments. Some corridor studies that have been completed (or are nearing completion) since the last RTP update in August 2000 have been endorsed by resolution with the expectation that the new projects generated by these studies would be incorporated into the current RTP update. This includes the Powell/Foster Corridor Study, Phase 1.

Finally, the Pleasant Valley Concept Plan, Powell Boulevard Streetscape Study and the McLoughlin Boulevard Enhancement Plan were completed in 2003 with the expectation that new projects generated by these local planning efforts would be incorporated into the 2004 RTP. The recommendations endorsed in each of these efforts are also reflected 2004 RTP.

The updated preferred system of projects served as the basis for defining an updated financially constrained system of improvements that represents a subset of roughly half of the preferred system. Development of the financially constrained system followed the basic principles of (a) maintaining the Region 2040 Plan policy emphasis of the 2000 RTP by focusing improvements in areas that serve as the economic engines for the region, including centers, ports and industrial areas, and (b) maintaining a similar project balance among travel modes, including roads, transit, bikeways, pedestrian improvements and other project categories.

The 2004 Regional Transportation Plan provides an updated set of financially constrained projects and programs for future MTIP allocations and is anticipated to meet the federal clean air act. As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. The MTIP allocates federal funds in the region, and is updated every two years, and includes a rolling, four-year program of transportation improvements.

### ***Technical Considerations***

Because of the inherent time and resource constraints, a single round of modeling and analysis was utilized for this update. The principal purpose for this approach was to complete the federal air quality conformity analysis required to demonstrate that the updated plan is consistent with the region's air quality maintenance plan.

To achieve this, the 2004 RTP update combined the preferred and priority systems contained in the 2000 RTP as a single preferred system that established the universe of projects eligible for inclusion in the financially constrained system that is eligible for federal funding. Exceptions to this guideline were local and regional projects identified in corridor refinements and local transportation plans since the 2000 RTP was adopted. This approach focused TPAC's activities on defining the financially constrained system, and was based on the assumption that the combination of preferred system projects from the existing plan, and new projects from subsequent studies, will be adequate to meet travel demand in the new 2025 horizon year.

As part of documenting findings from this limited RTP modeling exercise, staff reviewed and updated system performance conclusions from the 2000 RTP, as appropriate, to reflect the new preferred and financially constrained systems. The 2004 RTP Update did not include an iterative process of multiple rounds of modeling to test new projects against the congestion management system and other RTP performance measures, since the new preferred system of improvements is expected to perform adequately. Any outstanding issues that were identified are referenced for future corridor or area studies.

In addition to updating transportation projects and growth forecasts, Metro must demonstrate that the 2004 RTP meets federal and state air quality analysis requirements. During November, Metro completed a technical analysis known as air quality conformity.

The results of the 2004 RTP update work tasks are included in the 2004 Regional Transportation Plan Public Comment document, which is included as Exhibit "A." A 30-day public comment period was held from October 31, 2003 through December 4, 2003. The Metro Council is being asked to approve this work and direct that a request be submitted for US Department of Transportation and U.S. EPA review and acknowledgement of the 2004 RTP Conformity Determination.

## **ANALYSIS/INFORMATION**

### **1. Known Opposition**

None known. The region is and has been in compliance with the Clean Air Act since 1996. The 2004 RTP financially constrained system of transportation improvements is anticipated to meet federal clean air act requirements.

### **2. Legal Antecedents**

There are a wide variety of past Federal, State and regional legal actions that apply to this action.

Federal regulations include:

- the Clean Air Act, as amended [42 U.S. C. 7401, especially section 176(c)]; and
- Federal statutes concerning air quality conformity [23 U.S.C. 109(j)];
- US EPA transportation conformity rules (40 CFR, parts 51 and 93)
- USDOT rules that require Metro to update RTPs on a three-year cycle [23 CFR 450.322(a)].

State regulations include:

- Oregon Administrative Rules for Transportation Conformity, (OAR Chapter 340, Division 252);
- Portland Area Carbon Monoxide Maintenance Plan and Portland Area Ozone Maintenance Plan each prepared in 1996 and which received Federal approvals on September 2, 1997 and May 19, 1997 respectively.

Previous related Metro Council actions include:

- Metro Resolution No. 00-2969, adopting the air quality conformity for the 2000 RTP;
- Metro Resolution No. 02-3186A, amending the 2000 RTP and 2002 MTIP to incorporate OTIA bond projects;
- Metro Ordinance 03-1007A, amending the 2000 RTP to incorporate the two phases of the South Corridor Study
- Metro Resolution 03-3351, amending the 2000 RTP and MTIP to incorporate the South Corridor LRT Project ( again, using a less than full analysis method to assess air quality impacts from the project when added to the RTP and MTIP).

### **3. Anticipated Effects**

Approval of this Resolution will allow submittal of the 2004 RTP as set forth in Exhibit A to the US Department of Transportation, Federal Highway Administration and Federal Transit Administration as well as the US Environmental Protection Agency for their review and hopefully, acknowledgement by US DOT and US EPA in a formal conformity determination that the 2004 RTP complies with the federal Clean Air Act and federal planning requirements. This approval will allow Metro and local, regional and state agencies to proceed with transportation investments within the region.

#### **4. Budget Impacts**

None. The subject transportation investments are allocations of Federal and State transportation funds.

#### **RECOMMENDED ACTION**

Adopt Resolution 03-3380.

RE: Conformity Determination for the Fiscal Year 2004 Regional Transportation Plan (RTP) and Fiscal Year 2004-2007 Metropolitan Transportation Improvement Program (MTIP)

Dear Mr. Bragdon:

The Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) have completed our review of the Portland Metro local conformity determination for the Fiscal Year (FY) 2004 RTP and FY 2004-2007 MTIP. A joint FHWA/FTA air quality conformity determination for the RTP and the TIP is required by *Section 93.104* of the Environmental Protection Agency's (EPA) August 15, 1997, *Transportation Conformity Rule Amendments: Flexibility and Streamlining: Final Rule, 40 CFR Parts 51 and 93 (Transportation Conformity Rule)* and the FHWA/FTA Metropolitan Planning Rule, *23 CFR 450*. Our USDOT conformity determination is based upon Metro's conformity determination analysis and documentation submitted to our offices, by your March 4, 2004, letter and attachments, as well as supplemental documentation.

The Metro Council and Joint Policy Advisory Committee on Transportation adopted the local conformity determination on the FY 2004 RTP and FY 2004-2007 MTIP on March 4, 2004. The local conformity analysis and supplemental documentation provided by Metro indicates that all air quality conformity requirements have been met. Based on our review, we find that the FY 2004 RTP and the FY 2004-2007 MTIP conform to the applicable state implementation plan in accordance with: *40 CFR Parts 51 and 93*; the January 2, 2002, *Revised Guidance for Implementing the March 1999 Circuit Court Decision Affecting Transportation Conformity*; and, the EPA's May 14, 1999, *Conformity Guidance on Implementation of the March 2, 1999, Conformity Court Decision*. This USDOT conformity determination has been developed in accordance with *Oregon Administrative Rule (OAR) Chapter 340 Division 252, Transportation Conformity*, which defines the procedures and frequency for demonstrating conformity within the State of Oregon. This federal conformity determination was made after consultation with EPA Region X, pursuant to the *Transportation Conformity Rule*.

This letter constitutes the joint FHWA/FTA air quality conformity determination for Metro's FY 2004 RTP and FY 2004-2007 MTIP. If you have any questions regarding this federal conformity finding, please contact Michelle Eraut, FHWA, at (503) 587-4716 or Jennifer Bowman, FTA, at (206) 220-7953.

Sincerely,

David O. Cox  
Division Administrator

RE: 2004-2007 Statewide Transportation Improvement Program (STIP)  
Amendment No.04-07-02 METRO-Region 1 - APPROVED

Dear Mr. Warner:

Your letter of January 28, 2004 transmitted Metro's 2004-2007 Transportation Improvement Program (TIP) for approval as part of the Oregon Department of Transportation's (ODOT) 2004-2007 STIP. The Federal Transit Administration (FTA) and Federal Highway Administration (FHWA) jointly approved the STIP on February 6, 2004 but, because Metro's air quality conformity process was still underway, that approval was limited to projects in the Portland area that are exempt from conformity.

Conformity of the Metro 2004-2007 TIP was accomplished on March 5, 2004. On March 17, 2004 Ms. Judy Sherrard, ODOT STIP Coordinator, provided a letter and tables by email, which summarize the ODOT Region 1 and METRO projects included in the Metro 2004-2007 TIP. A table was also provided which identifies Metro TIP projects that will not appear in the printed 2004-2007 STIP document because they have already advanced as part of ODOT's 2002-2004 STIP. It is our understanding that these tables have been fully coordinated with Metro staff.

Based on the above, approval is given to amend the Metro 2004-2007 TIP into ODOT's 2004-2007 STIP as outlined in the tables provided with Ms. Sherrard's March 17, 2004 letter.

Please distribute a copy of this letter to appropriate ODOT staff.

Sincerely,

Fred P. Patron  
Senior Transportation Planner  
Federal Highway Administration

Rebecca Reyes-Alicca  
Community Planner  
Federal Transit Administration

## Federal Transportation Planning Factors

## **Transportation Equity Act for the 21<sup>st</sup> Century Planning Factors and the 2004-07 MTIP**

The Transportation Efficiency Act for the 21<sup>st</sup> Century (TEA-21) requires MPO's to describe how their activities address seven planning factors identified in the plan. The MTIP is one of the MPO activities that need to describe how those factors are addressed. The TEA-21 planning factors are:

- Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity and efficiency;
- Increase the safety and security of the transportation system for motorized and non-motorized users;
- Increase the accessibility and mobility options available to people and for freight;
- Protect and enhance the environment, promote energy conservation and improve quality of life;
- Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight;
- Promote efficient management and operations; and
- Emphasize the preservation of the existing transportation system.

Following is a description of the how this MTIP addresses the TEA-21 planning factors.

**1. Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity and efficiency.**

- All Transportation Priorities projects evaluated on their impact on economic development and promotion of "primary" land use elements of the 2040 growth concept development such as centers, industrial areas and inter-modal facilities.
- Special category for freight improvements calls out the unique importance for these projects.
- All freight projects evaluated on their impact on industrial jobs and businesses in the "traded sector."

**2. Increase the safety and security of the transportation system for motorized and non-motorized users.**

- All Transportation Priorities projects ranked according to specific safety criteria.
- Road modernization and reconstruction projects are scored according to relative accident incidence.
- All Transportation Priorities projects must be consistent with regional street design guidelines that provide safe designs for all modes of travel.

**3. Increase the accessibility and mobility options available to people and for freight.**

## ***Appendix 2: Metropolitan Transportation Improvement Program 2004-07***

---

- Measurable increases in accessibility to priority land use elements of the 2040-growth concept is a criterion for all Transportation Priorities projects.
  - The Transportation Priorities program places a heavy emphasis on non-auto modes in an effort to improve multi-modal accessibility in the region.
- 4. Protect and enhance the environment, promote energy conservation and improve quality of life.**
- The MTIP conforms to the Clean Air Act.
  - The MTIP focuses on allocating funds for clean air (CMAQ), livability (Transportation Enhancement) and multi- and alternative – modes (STIP).
  - Bridge projects in lieu of culverts have been funded through the MTIP to enhance endangered salmon and steelhead passage.
  - "Green Street" demonstration projects funded to employ new practices for mitigating the effects of storm water runoff.
  - All road projects scored on their commitment to planting street tree species that are high performers for storm water interception and summer energy conservation.
- 5. Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight.**
- Projects funded through the Transportation Priorities process must be consistent with regional street design guidelines that integrate minimum acceptable facilities for all modes of travel.
  - The Transportation Priorities process funds categories of projects such as Boulevards and Pedestrian improvements that integrate multi-modal facilities in the public right-of-way where they do not exist or are substandard.
  - Freight improvements are evaluated according to potential conflicts with other modes and their impact on connecting industrial areas with the regional freight network and inter-modal facilities.
- 6. Promote efficient management and operations.**
- Transportation Priorities projects are scored according to relative cost effectiveness (measured as a factor of total project cost compared to measurable project benefits).

## ***Appendix 2: Metropolitan Transportation Improvement Program 2004-07***

---

- TDM projects are solicited in a special category to promote improvements or programs that reduce SOV pressure on congested corridors.
  - TSM/ITS projects are funded through the MTIP.
- 7. Emphasize the preservation of the existing transportation system.**
- Reconstruction projects that provide long-term maintenance are identified as a funding priority.

Technical ranking criteria (by mode)	13
Qualitative Considerations	32
Local Public involvement checklist	33

## **Introduction**

A summary of the Transportation Priorities 2004-07 program and the application materials for allocation of regional flexible funds for the years 2006 and 2007 is included in this packet. Metro anticipates allocating approximately \$52 million of Surface Transportation Program (STP) and Congestion/Air Quality (CMAQ) grant funds.

An outreach process preceded this allocation process to determine a policy objective for the allocation of regional flexible funding and to learn how the allocation process could be improved. The outreach process led to the adoption of Metro Resolution 02-3206, which includes policy direction for the allocation of regional flexible funds and instructions for the Transportation Priorities 2004-07 application process.

## **Summary of Annual Regional Spending on Transportation**

Approximately \$635 million is spent on transportation in the Metro region each year. This includes spending on maintenance and operation of the existing road and transit system, construction of new facilities to meet growing demand for additional capacity and service and programs to manage or reduce demand for new facilities. Figure 1 shows how funds are spent in this region.

*Figure 1. Regional Transportation Spending*

Regional flexible funds represent \$26 million of this annual spending, or approximately 4 percent of the total amount of money spent on transportation in this region. These funds receive a relatively high degree of attention and scrutiny, because unlike most sources of transportation revenue, regional flexible funds may be spent on a wide variety of transportation projects or programs.

## **Policy Guidance**

As distributors of the regional flexible funds portion of transportation spending in this region, JPACT and the Metro Council reviewed the regional flexible fund allocation program given the small percentage that these funds represent of total regional spending, the funding program's flexibility in application and the links between transportation, land use and economic vitality. In July 2002, JPACT and the Metro Council adopted new policy direction for the allocation of regional flexible funds and instructions for the Transportation Priorities 2004-07 application process.

The primary policy objective for the Transportation Priorities 2004-07 program is to leverage economic development in priority 2040 land-use areas through investments that support:

- centers
- industrial areas and
- urban growth boundary expansion areas with completed concept plans

Other policy objectives include:

- emphasize modes that do not have other sources of revenue
- complete gaps in modal systems
- develop a multi-modal transportation system

The Transportation Priorities 2004-07 program will address this policy guidance in two ways. First, the program provides a financial incentive to nominate projects that leverage economic development in priority 2040 land-use areas. Projects that meet this threshold will be eligible for up to a full regional match of 89.73 percent. Other transportation projects that may have systemic transportation merit but do not meet the priority 2040 land-use threshold will only be eligible for up to 70 percent regional match (see page 11 for further explanation of regional match eligibility).

The second means by which the program will address the policy guidance is through the technical evaluation and ranking criteria. Forty points out of the possible 100 points technical evaluation score is dedicated to evaluation of the development of the land uses served by the candidate transportation project or program.

New in this year's allocation program is a qualitative assessment of the development potential of the land uses served. This will provide a broader assessment and understanding of the ability of the transportation project to leverage other community investments, including job retention and creation.

## **Solicitation Packet Summary**

### **Transportation Priorities 2004-07 program and regional flexible funding**

The amount of regional flexible funds available to be allocated is determined through the Congressional authorization and appropriation process. Funds are estimated to be available based on an authorization bill, currently named the Transportation Efficiency Act for the 21<sup>st</sup> Century (or TEA-21), which grants spending authority for a six-year period. A new authorization bill is expected in 2003.

Regional flexible funds are derived from two components of federal transportation authorization and appropriations process; the Surface Transportation Program (STP) and the Congestion Management / Air Quality (CMAQ) program. Approximately \$52 million dollars is expected to be available to the Portland metropolitan region from these two grant programs during the years 2006 and 2007. The Transportation Priorities program is the regional process to identify which transportation projects and programs will receive these funds.

Adjustments to the previous allocation of these funds for the years 2004 and 2005 will also be made as necessitated by delays in project readiness or special appropriations effecting those years.

### **Type of funding available**

As mentioned, regional flexible funds come from two sources; Surface Transportation Program (STP) and Congestion Mitigation / Air Quality (CMAQ) funding programs. Each program's funding comes with unique restrictions.

- **Surface Transportation Program funds** may be used for virtually any transportation project or program except for construction of local streets.
- **Congestion Mitigation / Air Quality program funds** cannot be used for construction of new lanes for automobile travel. Additionally, projects that use these funds must demonstrate that some improvement of air quality will result from building or operating the project or program.

As in previous allocations, the region expects to select a variety of projects so that funding conditions may be met by assigning projects to appropriate funding sources after the selection of candidate projects. Applicants do not need to identify from which program they wish to receive funding.

### **Eligible applicants and project cost limits**

Project applications may be submitted on behalf of eligible sponsors by: Metro, Tri-Met, SMART, Oregon DEQ, ODOT, Washington County and its cities, Clackamas County and its cities, Multnomah County and its eastern county cities, City of Portland, Port of Portland, and Parks and Recreation Districts.

Washington County and its cities, Clackamas County and its cities, Multnomah County and its eastern cities, and the City of Portland will be assigned a target for the maximum amount of project costs that may be submitted for funding consideration. These jurisdictions shall work through their transportation coordinating committees to determine which projects will be submitted based on the target amount.

### **Eligible projects**

To be eligible for regional flexible funds, projects must be a part of the 2000 Regional Transportation Plan's financially constrained system. To make a project eligible for allocation of regional funds during this allocation process, JPACT and the Metro Council need to approve a proposed amendment to the financially constrained project list. If a project is proposed to be amended to the financially constrained system that is not considered "exempt" for air quality analysis purposes, an air quality analysis would need to be completed and approved before the project(s) could be amended into the financially constrained system.

To be eligible for consideration for regional flexible funding in this allocation process, JPACT and the Metro Council may consider awarding funding to a project and amending the financially constrained system under the following general condition.

A jurisdiction may petition JPACT and the Metro Council to exchange a project that is currently in a publicly adopted plan for a project(s) currently in the financially constrained network of similar cost (+ or - 10%).

The projects should be expected to result in a neutral or improved impact on air quality.

Application for freeway interchange projects and preliminary engineering of projects for addition of new freeway lanes are eligible. Projects to acquire right of way or to construct new freeway capacity are not eligible.

Application for funding of regional transportation related programs are eligible.

### **Preliminary screening criteria**

1. Project design must be consistent with regional street design guidelines for its designated design classification. Vehicle facility design classifications may be found in Chapter 1 of the Regional Transportation Plan (RTP). Regional street design guidelines may be found in Metro's *Creating Livable Streets* handbook. Green street design alternatives consistent with the design guidelines of the *Creating Livable Streets* handbook may be found in Metro's *Green Streets: Innovative Solutions for Stormwater and Stream Crossings* handbook. If you have any questions regarding classification of a candidate facility, contact Tom Kloster at 503-797-1832.
2. Project design must be consistent with regional functional classification system described in the 2000 RTP. Chapter 1 of the RTP contains maps designating the motor vehicle, transit, freight, pedestrian, and bike systems. Projects that are proposed on facilities identified on these systems maps must be consistent with the associated system functions.
3. Candidate projects must be included in the Financially Constrained system of the 2000 RTP or otherwise eligible for consideration to amendment of the Financially Constrained system, consistent with the process described in the above section "Eligible Projects."
4. The total cost of submitted projects must be consistent with targets adopted by JPACT and Metro Council for the jurisdictions eligible to apply for funding.
5. Projects of any amount, up to jurisdictional cost targets, may be submitted. Projects costing less than \$200,000 are not encouraged because administrative costs of bringing a project to bid would be relatively high. Refinement of project definition or scope may be encouraged during the preliminary stage for small projects.

### **Public involvement**

Projects must meet Metro's requirements for public involvement. Projects must be identified in a plan that meets the standards identified in the Metro' Local Public Involvement Checklist (see page 33 of this packet).

Furthermore, any public agency nominating a project must have its governing body identify that project(s) as their priority for application of regional flexible funds. The governing body shall identify these priority projects in a meeting open to the public prior to the release of a technical evaluation of the project(s). Adopting a resolution stating the intentions of the governing body with regard to project priority for regional flexible funds is an example of a process that would satisfy this requirement.

### **Technical ranking methodology**

Information about how projects within each mode will be ranked and other special instruction follow in the sections below. Metro staff will calculate a draft technical score for each project based on the information provided in the application and performance of the project relative to the technical criteria and the other candidate projects within the same mode category.

### **Allocation process information**

The draft technical score and other qualitative considerations will be summarized within each modal category and presented to TPAC for review. Metro staff and TPAC will then make a recommendation to narrow the projects for further consideration to JPACT and the Metro Council. Metro staff and TPAC may not recommend further consideration of a project within a particular mode category that has a technical score of 10 or more fewer points than another project not recommended for further consideration.

JPACT and the Metro Council will select projects for further consideration, narrowing the candidate projects to approximately 150 percent of available funding. Further environmental information of remaining candidate projects may be required at that time. A final recommendation and selection of projects within available funding revenues will then be made.

### **TRANSPORTATION PRIORITIES 2004-07 Program Schedule**

<b>September 2002</b>	Project solicitation begins Applications released
<b>December 2002</b>	Project applications due
<b>February 2003</b>	Technical rankings and draft environmental justice analysis released Public hearings held
<b>February/March 2003</b>	150% cut list recommendations released
<b>March/April 2003</b>	Public hearings held Final recommendation approved
<b>May/June 2003</b>	Air quality conformity determination Public hearing held STIP reporting and documentation
<b>July 2003</b>	Full MTIP adoption
<b>October 2003</b>	Obligation of funding begins

## TRANSPORTATION PRIORITIES 2004-07: Investing in the 2040 Growth Concept

### PROJECT SOLICITATION FORM

(complete this cover form for each candidate project)

**1. Project Title:**

**2. RTP Project No.:**

**3. Lead Agency** (i.e., responsible for match):

**4. Project Contact:**

- a. Name \_\_\_\_\_
- b. Title \_\_\_\_\_
- c. Phone \_\_\_\_\_
- d. Fax \_\_\_\_\_
- e. E-mail (if any) \_\_\_\_\_
- f. Mailing Address: \_\_\_\_\_  
\_\_\_\_\_

**5. Project Cost/Requested Funds** (PLEASE PROVIDE INFORMATION ON THIS FORM):

	PE	ROW	CONSTRUCTION	TOTAL
Federal				
Local				
Private				
TOTAL				

**6. Project Description** (summary for public presentation purposes, use 8.5" x 11" sheets)

- a. Street or Facility, if applicable
- b. Termini or project boundaries.
- c. Brief physical description of main project features (e.g., length, number and width of lanes, bike lanes and/or sidewalks, bridge crossings, medians, planting strip, etc.)
- d. Explain current transportation problem and how the nominated project would address the problem.
- e. Describe significant unique aspects of the project that transcend technical evaluation.
- f. Provide photo(s) of project area; digital preferred (no more than five).
- g. Attach 8.5" X 11" vicinity map indicating project and nearest major arterial intersection.
- h. Complete the ODOT Prospectus, following. **Parts 1 and 2 must be completed for all projects.** Part 3 (Environmental Checklist) will be required of projects advanced to the semi-final candidate list. Consult with your ODOT Local Program Coordinator (Martin Andersen, at 503-731-8288, and Tom Weatherford, at 503-731-8238) if you have questions regarding elements of the form.
- i. See the special instructions with the criteria and measures description for each modal category. Make sure the project description addresses all special instructions.

ODOT Prospectus Part 1 & 2

ODOT Prospectus Part 3

**METRO**  
**TRANSPORTATION PRIORITIES 2004-07**  
**Project Match Eligibility by Location**

**Determination of Level of Regional Match**

Projects will be determined eligible for different levels of regional match depending on whether they directly and significantly benefit a 2040 primary or secondary land use (Central city, regional or town center, main street, station community or industrial area/inter-modal facility). Projects that are determined to have a direct and significant benefit to these areas will be eligible for up to 89.73% regional match on the project. Other projects will be eligible for up to a 70% regional match. This determination will be based on the guidelines outlined below within each project category. Metro staff will make a preliminary determination on match level based on an early summary of the project that addresses these project definitions. Final determination of match level eligibility will be made by JPACT and the Metro Council.

**Road Capacity, Road Reconstruction, Transit, and Bicycle projects**

The following projects will be eligible for up to an 89.73% regional match:

- projects located in a 2040 primary or secondary land-use area,
- projects fully within one mile of a 2040 primary land-use area or town center if the facility directly serves that land-use area.

All other projects will be eligible for up to a 70% regional match.

**Freight projects**

The following projects will be eligible for up to an 89.73% regional match:

- projects located in an industrial area,
- projects fully within one mile of an industrial area or inter-modal facility<sup>1</sup> if the project facility directly serves the industrial area or inter-modal facility.

All other projects will be eligible for up to a 70% regional match.

**Bridge, Pedestrian, TOD and Green Street demonstration projects**

The following projects will be eligible for up to an 89.73% regional match:

- projects located in a 2040 primary or secondary land-use area.

All other projects will be eligible for up to a 70% regional match.

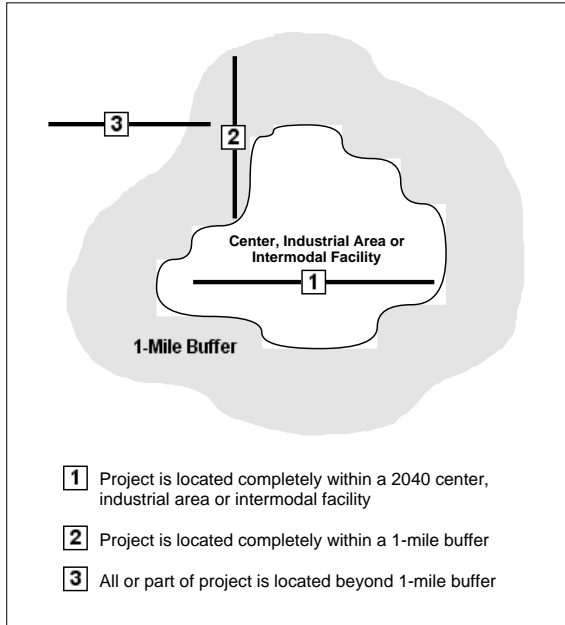

**TDM**

See TDM evaluation sheet.

**Planning**

All planning projects will be eligible for up to an 89.73% regional match.

<sup>1</sup> An inter-modal facility is a facility, terminal or railyard as defined in the Regional Transportation Plan Figure 1.17.

- Road, transit, bicycle and freight projects would be eligible for full regional match of 89.73% under project conditions 1 and 2 above.
- Bridge, Pedestrian and TOD projects would be eligible for full regional match of 89.73% under project condition 1 above.
- Other projects in these categories would be eligible for up to 70% regional match.

**Bike**

**GOAL: Ridership (Usage) (25 points)**

What is the project's potential ridership based on travel shed, existing socio-economic data and existing travel behavior survey data consistent with 2020 modal targets?

**Numerical change between existing year riders and forecast year riders (10 points)**

To improve the accuracy of the numerical change measure, it is recommended that project submittals include "before" bike counts in order to calibrate actual existing year riders and estimated existing year riders in the Metro bicycle travel demand model.

Points

- 10 High
- 7 Medium
- 3 Low

PLUS

**Total Forecast Year population and employment within one-half mile of the project (5 points)**

Points

- 5 High
- 3 Medium
- 1 Low

PLUS

**System Connectivity (project completes a gap in the Regional Bikeway System (10 points)**

Points

- 10 High (for greater than 67% of bike trips to and within centers)
- 7 Medium (for 34 to 66% percent of bike trips to and within centers)
- 3 Low (for 0 to 33% of bike trips to and within centers)

**GOAL: Safety (20 points)**

Does the project address an existing deterrent to bicycling?

**Target roadway a deterrent to bicycling.**

The staff resource to be utilized for this measure is the 2002 Metro "Bike There!" Map. The map rates roadways where bicyclists currently share the travel lane with motorists. The map uses a suitability rating to describe low, moderate, and high motorized traffic volumes, based on field work and existing traffic counts in the Region.

Points

- 15 High auto speed and volume (Daily traffic volumes greater than 10,000 and speeds greater than 35 miles per hour)
- 8 Moderate auto speed and volume (Daily traffic volumes of 3,000 to 10,000 and speeds of 25 to 35 miles per hour)
- 3 Low auto speed and volume (Daily traffic volumes of less than 3,000 and speeds of less than 25 MPH)

**Other safety factors: Multi-Use Path**

<u>Points</u>	
5	Yes
0	No

**GOAL: Address 2040 Land Use Objectives (40 points)**

**Regional Bikeway System Hierarchy from RTP (10 points)**

Points

- 10 Regional Access Function
- 7 Regional Corridor Function
- 3 Bikeway Connector Function

PLUS

**Region 2040 Mapped Land Use Designation (10 points)**

Points

- 10 Central City, Regional and Town Centers, Main Streets, Industrial areas
- 7 Corridors and Employment Areas
- 3 Inner and Outer Neighborhoods

PLUS

**Level of Community Focus (20 points) See Attachment A**

**GOAL: Cost Effectiveness (15 points)**

Total project cost divided by ridership usage points

<u>Points</u>	
15	Low cost
8	Medium cost
3	High cost

**Special notes and instructions for bike projects:**

- 1. Provide specific alignment information for the entire project to facilitate ridership calculation.**
- 2. Direct any questions to Bill Barber at 503-797-1758.**

<b>Boulevard</b>	
<b>GOAL: Reduce motor vehicle speeds (10 points)</b>	
Implement design elements that will help to reduce automobile speeds <sup>1</sup> along boulevard segments, with a goal of reducing speeds to 25 miles per hour, or less. (10 points)	
<u>Points</u>	
10	High – 5 or more design elements
7	Medium – 4 design elements
5	Low – 3 design elements
3	2 or fewer design elements
<b>GOAL: Enhance walking, biking and use of transit (15 points)</b>	
Does project achieve optimum sidewalk width of at least 10 feet? (5 points)	
(Note: Candidate projects that are constrained by narrow right-of-way may obtain full 5 points upon demonstration that all practical means are employed to maximize sidewalk width including: narrowing travel lanes an center median, elimination of on-street parking on one or both sides of street and transfer of bike facilities to parallel facility. Credit for transfer of bike lanes to a parallel facility may only occur if the parallel facility is in reasonable proximity and is included in the jurisdictions transportation system plan with bike preferential treatments and improvements.)	
Does project include design elements that enhance walking, biking and use of transit <sup>2</sup> ? (10 points)	
<u>Points</u>	
10	5 or more design elements
7	4 design elements
5	3 design elements
3	1 to 2 design elements
0	No design elements
<b>GOAL: Implement Proven Green Street Elements (10 bonus points)</b>	
<ul style="list-style-type: none"> <li>• Project includes planting of street trees consistent with the Trees for Green Streets handbook; see page 17 for tree species and page 56 for planting area dimensions. (5 points)</li> <li>• Project includes any of the Green Street design elements described in Section 5.3 of the Green Streets handbook. (5 points)</li> </ul>	

<sup>1</sup> Design elements that reduce automobile speeds include: narrowed travel lanes, remove travel lanes, on-street parking, reduced turn radii, marked pedestrian crossings, new pedestrian refuges, street trees, curb extensions and signal timing.

<sup>2</sup> Design elements that enhance alternative modes include: transit amenities, landscaped buffer, curb extensions, raised pedestrian refuge median, increased pedestrian crossings (including mid-block crossings), bike lanes (on or parallel street), removing obstructions from the primary pedestrian-way and street amenities such as benches, pedestrian scale lighting, public art, etc.

**GOAL: Improve Safety (20 points)**

Does project remove hazards to walking, biking and use of transit<sup>3</sup>? (10 points)

<u>Points</u>	
10	5 or more elements
7	4 elements
5	3 elements
3	1 to 2 elements
0	No elements

Project is located on a transit corridor. (4 points)

Project is located on regional bicycle system (3 points)

Project is located within 1/4-mile of a school, civic complex or cultural facility. (3 points)

**GOAL: Addresses 2040 Land Use Objectives (40 points)**

2040 Land Use Designation; Project is located in: (5 points)

<u>Points</u>	
5	Central city, regional centers
3	Town centers, main streets, station communities
0	All other areas

Direct access to or circulation within the 2040 priority land use area. (10 points)

<u>Points</u>	
10	High (% of trips to and from priority land use areas greater or equal to 40%)
8	Medium (25-39% of trips to and from priority land uses)
4	Low (10-24% of trips to and from priority land uses)
0	(% of trips to and from priority land use less than 10%)

Note: %of trips to and from Tier 2 land uses (town centers, main streets and station communities) was dropped because they are now included in "priority 2040 land uses."

Regional Street Design Hierarchy; Project is: (5 Points)

<u>Points</u>	
5	Located in a boulevard designation
2	Located in a street designation
0	Located outside of above areas

Level of Community Focus (20 points) – see Attachments A and B

<u>Points</u>	
20	High
10	Medium
0	Low

<sup>3</sup> Project includes actions to correct the following safety elements: 5 travel lanes, 12-foot lane widths or greater, travel speeds greater than 40 mph, lack of pedestrian refuge, more than 330 feet between marked pedestrian crossings, poor vertical delineation of pedestrian-way (e.g., no curb, intermittent curb, numerous driveways, substandard width, utilities) and high incidence of pedestrian and bicycle injuries).

**GOAL: Cost-Effectiveness Criteria (15 points)**

Implement maximum feasible, highest priority boulevard design elements at lowest cost.

Points

- |    |                           |
|----|---------------------------|
| 15 | Low cost/effectiveness    |
| 8  | Medium cost/effectiveness |
| 0  | High cost/effectiveness   |

Note: Cost effectiveness = Total project cost is divided by use factor points (reduce motor vehicle speeds + enhance alternative mode travel)

**Special notes and instructions for boulevard projects:**

- 1. Under grounding of utilities is not eligible for federal reimbursement, nor may such costs be counted as local contribution toward matching fund requirements.**
- 2. Direct any questions to Kim White at 503-797-1617.**

<p><b>Freight</b></p> <p><b>GOAL: Addresses 2040 Land Use Objectives (40 points)</b></p> <p>Improvement of freight access to or within an industrial area or to an inter-modal facility via rail or road (High, Med, Low – 10 pts)</p> <p>Ability of the project to leverage and retain economic development and traded sector employment; traded sector employment in year 2020 in area of project effect (High, Med, Low – 10 pts)</p> <p>Readiness of industrial area or inter-modal facility to develop or to retain existing development</p> <ul style="list-style-type: none"> <li>• Local/regional jurisdiction protection of industrial area or inter-modal facility beyond Title 4 requirements (High, Med, Low – 5 pts)</li> <li>• Removal of a barrier on a Tier B or D industrial parcel within the UGB that elevates the parcel to Tier A (Y/N – 5 pts)</li> </ul> <p>Reduction of truck freight out-of-direction travel</p> <ul style="list-style-type: none"> <li>• Reduction in freight VMT (High, Med, Low – 5 pts)</li> <li>• Reduction in through freight traffic in mixed use areas or neighborhoods (Y/N – 5pts)</li> </ul>
<p><b>GOAL: Supports the region’s ability to attract or retain industrial business overall (first-order economic benefits)</b></p> <p>Reduction in regional and local freight travel time (High, Med, Low – 5 pts each)</p> <p>Improves opportunities for job retention and growth and economic development (High, Med, Low – 10 pts) Qualitative description that may reference RLS Study, the MPAC Jobs Subcommittee jobs memo, traded sector, high tech, and warehouse/distribution jobs.</p>
<p><b>GOAL: Cost effectiveness (20 points)</b></p> <p>Hours of reduction in regional and local freight travel time v. project cost (High, Med, Low – 10 pts each)</p>
<p><b>GOAL: Safety (High, Med, Low – 20 points)</b></p> <p>Project improves safety, reviewing factors such as:</p> <ul style="list-style-type: none"> <li>• Truck movement geometry</li> <li>• Reduction in potential for freight conflicts with non-freight modes</li> <li>• Accident rates at the location</li> <li>• Site distance improvements</li> <li>• Other relevant factors identified by the applicant</li> </ul>
<p><b>Special notes and instructions for freight projects:</b></p> <ol style="list-style-type: none"> <li><b>1. Metro will determine the area of effect of a freight project and will collaborate with PSU to determine the traded sector relationship of freight projects.</b></li> <li><b>2. Direct any questions to John Gray at 503-797-XXXX.</b></li> </ol>

**Green Street Demonstration: Retrofit Project**

Note: Performance monitoring plan that includes before and after measurements of storm water runoff quantity and quality is required for allocation of regional flexible funds to this project category.

**GOAL: Addresses 2040 Land Use Objectives (10 points)**

2040 Land Use Designation; Project is located in:

Points

- 10 Central city, regional centers, industrial areas, town centers
- 7 Main streets, station communities
- 3 Corridors
- 0 All other areas

**GOAL: Effective removal of stormwater runoff from piped system and infiltration of stormwater near source of runoff. (60 points)**

Size of project area (10 pts)

Points

- 10 High
- 7 Medium
- 3 Low

Design Elements (50 points)

- Preserving existing large trees and/or planting trees consistent with recommendations of Trees for Green Streets handbook (10 points)
- Removal of impervious surface area (High = 10 points, Medium = 7 points, Low = 3 points)
- Sidewalks and/or low traffic areas constructed with pervious material (10 points)
- Curb options consistent with handbook options (10 points)
- Use of Infiltration and/or detention devices (swale, filter strip, infiltration trench, linear detention basin, street tree well, engineered products) (10 points)

**GOAL: Cost effectiveness (30 points)**

Amount of project area that is infiltrated v. project cost (High, Med, Low – 30 pts)

**Special notes and instructions for green street demonstration projects:**

1. Performance monitoring plan that includes before and after measurements of storm water runoff quantity and quality is required for allocation of regional flexible funds to this project category.
2. **Direct any questions to Ted Leybold at 503-797-1759.**

**Green Street Demonstration: Culvert Project**

Note: Culvert must be on regional inventory of culverts on regional facilities identified as inhibiting fish passage. A geomorphology analysis is required as part of preliminary engineering of the project to prevent negative impacts. Design solution should be consistent with Green Street handbook design guidance. Multiple culvert projects on the same stream system may be rated as one project to maximize overall benefit to the stream system.

**GOAL: Effectiveness (70 points)**

Type of fish passage solution (20 points)

Fish barrier replaced or retrofitted with:

Points

- 20 Bridge structure over natural hydraulic area
- 13 Stream simulation culvert
- 5 Repair of fish ladder, jump pools, etc.

Amount of upstream habitat (stream miles) with improved fish passage (25 points)

Points

- 25 High
- 15 Medium
- 5 Low

Quality of habitat at fish barrier passage (10 points)

Points

- 10 High
- 7 Medium
- 3 Low

Presence of downstream fish barriers (15 points)

Points

- 15 None
- 10 One
- 5 Two
- 0 Three or more

**GOAL: Cost effectiveness (30 points)**

Amount of habitat (stream miles) with new or improved fish access vs. project cost (30 points)

**Special notes and instructions for green street culvert demonstration projects:**

1. Culvert must be on regional inventory of culverts on regional facilities identified as inhibiting fish passage.
2. A geomorphology analysis is required as part of preliminary engineering of the project to prevent negative impacts.
3. Design solution should be consistent with Green Street handbook design guidance.
4. Multiple culvert projects on the same stream system may be rated as one project to maximize overall benefit to the stream system.
5. **Direct any questions to Ted Leybold at 503-797-1759.**

<b>Pedestrian Projects</b>	
<b>GOAL: Encourage Walking (25 points)</b>	
Project will encourage walking as a form of travel. The following elements will be considered in determining the projected increase in pedestrian mode share, consistent with 2040 modal targets:	
Project is located in an area with a high potential for pedestrian activity. (15 Points)	
Points	
15	Most potential (within a Pedestrian district) <sup>4</sup>
10	Moderate potential (along a Transit/mixed use corridor <sup>5</sup> within a 1/4-mile of a major transit stop, school, civic complex or cultural facility)
5	Less potential (along a Transit/mixed-use corridor location not specified above)
0	Least potential (other areas)
Project will correct a deficiency/ significantly enhance the pedestrian system in the area such that new pedestrian trips will be generated. (10 Points)	
Points	
5	Completes missing sidewalk link
5	Removes pedestrian obstacles <sup>6</sup>
<b>GOAL: Improve Safety (20 points)</b>	
Project corrects a safety problem. Very wide roads with fast moving traffic make crossing difficult and dangerous. Factors such as high number of collisions involving pedestrians, traffic volume, posted speed greater than 30 mph, number of travel lanes, road width, complexity of traffic environment <sup>7</sup> and existence of sidewalks will be considered in determining critical safety problems.	
Project addresses a documented safety problem. (10 Points)	
Points	
10	High (>30 incidents during three-year period)
7	Medium (16-30 incidents during three-year period)
3	Low (0-15 incidents during three-year period)
Project location includes factors that deter walking. <sup>8</sup> (10 Points)	
Points	
10	High (5 or more factors exist)
7	Medium (3-4 factors exist)
3	Low (less than 3 factors exist)

<sup>4 and 2</sup> Refer to Figure 1.19 in the Regional Transportation Plan, which designates pedestrian districts and transit/mixed-use corridors.

<sup>6</sup> Obstacles include missing curb ramps, >330' spacing between pedestrian crossing and lack of pedestrian refuges.

<sup>7</sup> Complexity of traffic environment refers to number of driveways and turning movements in project area.

<sup>8</sup> Factors that impact walking safety include: travel speeds greater than 30 mph, lack of landscaped pedestrian buffer, curb-to-curb widths greater than 70 feet, more than 20,000 ADT, more than 2 travel lanes, complex traffic environment, lack of sidewalks, poor pedestrian way delineation and lack of marked pedestrian crossings.

**Pedestrian Projects (continued)**

**GOAL: Addresses 2040 Land Use Objectives (40 points)**

2040 Land Use (10 points)

Points

- 10 Central city, regional centers
- 7 Town centers, main streets, station communities
- 3 All other areas

Direct access to or circulation within the 2040 priority land uses (10 points)

Points

- 10 High (project is located within or connects directly to priority land uses)
- 7 Medium
- 3 Low

Level of community focus – see Attachment A (20 points)

**GOAL: Provide Mobility at Reasonable Cost (15 points)**

Points

- 15 Low Cost/increase pedestrian mode share
- 10 Moderate Cost/increase pedestrian mode share
- 5 High Cost/ increase pedestrian mode share

Note: Cost effectiveness = Total project cost is divided by use factor points (increase pedestrian mode share)

**Special notes and instructions for pedestrian projects:**

1. Performance monitoring plan that includes before and after measurements of storm water runoff quantity and quality is required for allocation of regional flexible funds to this project category.
2. **Direct any questions to Kim White at 503-797-1617.**

<p><b>Roadway Capacity</b></p>	
<p><b>GOAL: Reduce Congestion (25 points)</b>                  (Project derives from CMS, consistent with 2020 per capita VMT targets)</p>	
<p><b>1998 V/C Ratio</b> (pm peak hr &amp; direction)</p>	<p><b>2020 V/C Ratio</b> (pm peak hr &amp; direction)</p>
<p><u>Points</u></p> <p>15 &gt;1.0                  10 &gt;0.9                  5 &lt;0.9</p>	<p><u>Points</u></p> <p>10 &gt;1.0                  7 &gt;0.9                  3 &lt;0.9</p>
<p><b>GOAL: Implement Proven Green Street Elements (10 bonus points)</b></p> <ul style="list-style-type: none"> <li>• Project includes planting of street trees consistent with the Trees for Green Streets handbook; see page 17 for tree species and page 56 for planting area dimensions. (5 points)</li> <li>• Project includes any of the Green Street design elements described in Section 5.3 of the Green Streets handbook. (5 points)</li> </ul>	
<p><b>GOAL: Enhance Safety (20 points)</b></p> <p>A panel of transportation professionals will rank projects based on a description of safety issues, including:</p> <ul style="list-style-type: none"> <li>• Accident Rate per Vehicle Mile (Use ODOT Accident Rate Book); per vehicle for intersections.</li> <li>• Sight line distance improvements.</li> <li>• Vehicle channelization (turn pockets – new or replacing free left turn lane, refined vehicle lane definition at intersections, etc.).</li> <li>• Design elements to reduce speeds where speed is an identified safety issue and existing speeds are higher than appropriate for the street’s functional classification.</li> <li>• New pedestrian and/or bicycle facilities added where no or substandard facilities previously existed.</li> <li>• Other relevant factors as identified by the applicant.</li> </ul> <p><u>Points</u></p> <p>20 High                  10 Medium                  0 Low</p>	
<p><b>GOAL: Addresses 2040 Land Use Objectives (40 points)</b></p> <p>Is a high proportion of travel on the project link seeking access to/from:</p> <p>Priority 2040 land use areas: High = 10 pts, Medium = 7 pts, Low = 5 pts                  Secondary 2040 land use areas: High = 7 pts, Medium = 5 pts, Low = 3 pts                  Other 2040 land use areas: High = 3 pts, Medium = 0 pts, Low = 0 pts</p> <p>Is a high number of vehicles on the project link seeking access to/from:</p> <p>Priority 2040 land use areas: High = 10 pts, Medium = 7 pts, Low = 5 pts                  Secondary 2040 land use areas: High = 7 pts, Medium = 5 pts, Low = 3 pts                  Other 2040 land use areas: High = 3 pts, Medium = 0 pts, Low = 0 pts</p> <p>Community Focus (20 points) See Attachment A</p>	

**GOAL: Provide Mobility at a Reasonable Cost (15 points)**

Cost per VHD eliminated in 2020: VHD = 2020 No-Build VHD - Build VHD

<u>Points</u>	
15	Top 1/3
10	Mid 1/3
5	Low 1/3

**Special notes and instructions for pedestrian projects:**

- 1. Mainline freeway right-of-way or construction projects are not eligible for regional flexible funds.**
- 2. Direct any questions to Terry Whisler at 503-797-1747.**

**Roadway Reconstruction**

**GOAL: Project brings facility to current urban design standard or provides long-term maintenance (25 points)**

2002 Condition: pavement base, etc.  
from ODOT

<u>Points</u>	
15	Fair
10	Poor
5	Very Poor

2012 Condition: pavement, base, etc.  
(without earlier improvement)

<u>Points</u>	
0	Fair
5	Poor
10	Very Poor

**OR**

2002 Condition: pavement base, etc.  
from ODOT

<u>Points</u>	
5	Fair
3	Poor
1	Very Poor

2012 Condition: pavement, base, etc.  
(without earlier improvement)

<u>Points</u>	
0	Fair
3	Poor
5	Very Poor

Project adds urban design elements where current elements do not exist or are substandard.

- Sidewalks (3 points)
- Pedestrian crossing and/or transit stop improvements (3 points)
- Bike facilities (3 points)
- Storm water facilities (3 points)
- Lighting (3 points)

**GOAL: Implement Proven Green Street Elements (10 bonus points)**

- Project includes planting or preserving street trees consistent with the Trees for Green Streets handbook; see page 17 for tree species and page 56 for planting area dimensions. (5 points)
- Project includes any of the Green Street design elements described in Section 5.3 of the Green Streets handbook. (5 points)

**GOAL: Enhance Safety (20 points)**

A panel of transportation professionals will rank projects based on a description of safety issues, including:

- Accident Rate per Vehicle Mile (Use ODOT Accident Rate Book); per vehicle for intersections.
- Sight line distance improvements.
- Vehicle channelization (turn pockets – new or replacing free left turn lane, refined vehicle lane definition at intersections, etc.).
- Design elements to reduce speeds where speed is an identified safety issue and existing speeds are higher than appropriate for the street’s functional classification.
- New pedestrian and/or bicycle facilities added where no or substandard facilities previously existed.
- Other relevant factors as identified by the applicant.

<u>Points</u>	
20	High
10	Medium
0	Low

**GOAL: Addresses 2040 Land Use Objectives (40 points)**

Is a high proportion of travel on the project link seeking access to/from:

Priority 2040 land use areas: High = 10 pts, Medium = 7 pts, Low = 5 pts  
 Secondary 2040 land use areas: High = 7 pts, Medium = 5 pts, Low = 3 pts  
 Other 2040 land use areas: High = 3 pts, Medium = 0 pts, Low = 0 pts

Is a high number of vehicles on the project link seeking access to/from:

Priority 2040 land use areas: High = 10 pts, Medium = 7 pts, Low = 5 pts  
 Secondary 2040 land use areas: High = 7 pts, Medium = 5 pts, Low = 3 pts  
 Other 2040 land use areas: High = 3 pts, Medium = 0 pts, Low = 0 pts

Community Focus (20 points) See Attachment A

**GOAL: Provide Mobility at Reasonable Cost (15 points)**

Cost per year 2020 VMT (or VT at interchanges & intersections)

Cost/Year 2020 Vehicles or VMT

<u>Intersections/Interchanges</u>		<u>Interstate Projects</u>		<u>Link Improvement</u>	
<u>Points</u>		<u>Points</u>		<u>Points</u>	
15	<\$.51 per vehicle	15	<\$.51 per vehicle	15	<\$.33/VMT
8	\$.51-.99 per vehicle	8	\$.51-.99 per vehicle	8	\$.24-\$.99 VMT
0	>\$1.00 per vehicle	0	>\$1.00 per vehicle	0	>\$.99/VMT

- Note.

**Special notes and instructions for pedestrian projects:**

1. Costs per year ranges will be updated to reflect current costs or points may be assigned for low medium and high cost.
2. Direct any questions to Terry Whisler at 503-797-1747.

**Transportation Demand Management (TDM) Regional Core Program**

Completely revise the technical project selection criteria for the Regional TDM Program, TDM is generally programmatic rather than project oriented. TDM and TMA programs requiring staffing would be classified as "Planning Projects" for the purposes of the Transportation Priorities solicitation. These components of the Regional TDM Program include the "core" TDM program at Metro and Tri-Met, new TMA start-ups, and the Wilsonville / SMART TDM Program.

TDM programs such as Region 2040 Initiatives (which includes the web-based rideshare project, etc.) and TMA Assistance (new and innovative projects/programs) that are more project-oriented will be ranked by the TDM subcommittee and submitted to TPAC. Refer to the technical project selection criteria below titled "TDM Program: TMA Assistance and Region 2040 Initiatives" for more specific detail.

**TDM Program: TMA Assistance and Region 2040 Initiatives**

TDM programs such as Region 2040 Initiatives (which includes the web-based rideshare project, etc.) and TMA Assistance (new and innovative projects/programs) that are project-oriented will be ranked by the TDM subcommittee and submitted to TPAC as part of the total Regional TDM Program. These programs are currently administered by Tri-Met.

**GOAL: Increase Alternative (Non-SOV auto) Modal Share (35 points)**

**Mode share increase for transit, bike, walk, shared-ride, telecommute or elimination of trip.**

<u>Points</u>	
35	High
20	Medium
5	Low

**GOAL: Addresses 2040 Land Use Objectives (40 points)**

**Region 2040 Mapped Land Use Designation (10 points)**

<u>Points</u>	
10	Central City, Regional and Town Centers, Main Streets, Industrial areas
7	Corridors and Employment Areas
3	Inner and Outer Neighborhoods

**Transit: Start-up Service**

Note: Applicant must demonstrate the ability and a commitment to continue new service after the expiration of application funding to be eligible for allocation of regional flexible funds.

**GOAL: Increase Ridership (35 points)**

New Boardings per vehicle revenue hour	
<u>Points</u>	
35	High boardings per revenue hour
20	Medium boardings per revenue hour
5	Low boardings per revenue hour

**GOAL: Address 2040 Land Use Objectives (40 points)**

Access to Centers; Central City, Regional and Town centers (10 points)  
 Number of centers served

Access to Mixed Use development (10 points)

- Forecast value of mixed-use index (High = 5, Med = 3, Low =1)
- Growth in forecast mixed-use index from current value (High = 5, Med = 3, Low =1)

Level of Community Focus: See Attachment A (20 points)

**GOAL: Provide Cost Effective Improvements (25 points)**

Cost/New Boarding	
<u>Points</u>	
25	Low Cost per new boarding
15	Medium cost per new boarding
5	High cost per new boarding

**Transit: Capital**

**GOAL: Increase Service Efficiency (20 points)**

Does the project include transit preferential and stop spacing treatments that reduce travel time and increase schedule reliability? Transit service hours saved.

<u>Points</u>	
20	High transit service hours saved
13	Medium transit service hours saved
5	Low transit service hours saved

**GOAL: Improve passenger experience (20 points)**

Does the project include improved passenger amenities such as shelters, benches, pad and sidewalk improvements, real time schedule information and other elements that improve the passenger experience through their entire trip? Maximize the number of passengers served by new amenities.

<u>Points</u>	
20	High number of riders served by new amenities
13	Medium number of riders served by new amenities
5	Low number of riders served by new amenities

**Appendix 3: Metropolitan Transportation Improvement Program 2004-07**

---

**GOAL: Address 2040 Land Use Objectives (40 points)**

Project location

Points

- 20 Tier I land use area (Central City, regional center, industrial area)
- 13 Tier II land use area (Town center, main street, station community)
- 5 Tier III land use area (Inner and outer neighborhoods, employment area)

Level of Community Focus: See Attachment A (20 points)

**GOAL: Provide Cost Effective Improvements (20 points)**

Cost/Service hour saved (10 points)

Points

- 10 Low cost per service hour saved
- 5 Medium cost per service hour saved
- 0 High cost per service hour saved

Cost/Riders served with new amenities (10 points)

Points

- 10 Low cost per rider served
- 5 Medium cost per rider served
- 0 High cost per rider served

**Special notes and instructions for transit projects:**

- 1. Direct any questions to Ted Leybold at 503-797-1759.**

**Attachment A; Measure of Level of Community Focus**

**(For projects serving mixed use areas and inner/outer neighborhoods)**

Up to twenty points will be awarded for how well a project leverages or complements development of other center activities. Consideration will be given to the maturity of a mixed use area, the level of community commitment to achieve a dynamic, mixed use, community center and the impact the proposed project will have on implementing a mixed use area. (20 points)

1. Progress in developing and quality of the mixed use center<sup>1</sup> (10 points)

What level of planning and planning implementation are completed in the priority land-use area?

- Concept or Vision plan only
- Comprehensive plan adopted
- New zoning in compliance with Comprehensive or Concept plan adopted
- New development code regulations in compliance with Comprehensive or Concept plan adopted
- Plan is in compliance with 2040 target densities

What financial tools are available for mixed use plan implementation?

- Market based implementation plan adopted<sup>2</sup>
- Tax increment financing available or programmed/budgeted; amount \$\_\_\_\_\_ (if known)
- Local improvement district funding available or programmed/budgeted; amount \$\_\_\_\_\_ (if known)
- Tax abatement program available or programmed/budgeted; amount \$\_\_\_\_\_ (if known)
- General fund monies programmed or budgeted; amount \$\_\_\_\_\_ (if known)
- Other; please specify \_\_\_\_\_

Have/are other civic investments being made (i.e. public buildings, plazas/promenades, etc.)?

- Please list; \_\_\_\_\_

Have/are other private investments being made?

- Please list; \_\_\_\_\_

Describe or list a sample of key associations and individuals that are committed to the development of your priority mixed use area as a center/focus of the community.

---

---

---

Describe other community or cultural activities (farmers market, street fairs, volunteer efforts) that are a part of your mixed use area.

---

---

---

2. Local objectives (10 points)

Describe how this project would help implement or complement key local development, economic and other policy objectives.

---

---

---

<sup>1</sup> Based on Metro's Report "Ten Principles for Achieving 2040 Centers."

<sup>2</sup> A market based implementation plan is a development strategy based on a market analysis of the location of the center, the market area or geography it serves, service competition from other areas for the target market, land values, density levels, access, price, quality and demand.

**Additional Qualitative Considerations**  
*(formerly referred to as Administrative Factors)*

In addition to the technical measures of a project listed above, other project elements or impacts may be listed for consideration by decision makers. These include; public support, over-match of funding, finishing a critical gap in a mode network, relationship to other local or regional goals such as affordable housing or protection of endangered species or any other consideration that makes a project unique.

These considerations as provided by the project applicant will be summarized and listed with the result of the technical rankings.

**Local public involvement checklist**

# Appendix 4

## Summary of Public Involvement Procedures and Comments

# Transportation plan update begins

**Public comment will be taken Oct. 31 to Dec. 4**

**M**etro is starting a periodic update of the Regional Transportation Plan (RTP) in order to maintain continued compliance with the Federal Clear Air Act and state guidelines. The update will include an air quality analysis of the 2004 RTP and 2004-07 Metropolitan Transportation Improvement Program.

The plan, updated every three years to ensure that it addresses future travel needs, will focus on projects for roads and freight movement, bicycling, transit and walking. These projects already have been adopted in local and regional plans and corridor studies through a public process.

Public comment will be taken Oct. 31 through Dec. 4. The staff recommendation on the technical draft of the plan will be available for public review on Oct. 31.

## **Public hearing will be held Dec. 4**

A public hearing will be held during the Thursday, Dec. 4, Metro Council meeting. The meeting begins at 2 p.m. at Metro Regional Center, 600 NE Grand Ave., Portland.

The council will take action on the update on Dec. 11 (tentative). For more information, visit [www.metro-region.org](http://www.metro-region.org) or call (503) 797-1839.

## **Other ways to comment**

Phone (503) 797-1900 option 2

Fax (503) 797-1911

E-mail [trans@metro.dst.or.us](mailto:trans@metro.dst.or.us)

Mail Kim Ellis, Metro  
600 NE Grand Ave.  
Portland, OR 97232

## **SUMMARY OF PUBLIC AND GOVERNMENT INVOLVEMENT RULES AND PROCEDURES FOR STIP DEVELOPMENT**

There are federal regulations and state policies regarding STIP public involvement. The federal regulations state that public involvement must be proactive, must provide opportunities for early and ongoing involvement, and must continue throughout the transportation planning and programming process. The state must comply with the requirements set out in Title VI of the Civil Rights Act, and the Executive Order pertaining to Environmental Justice. They further stipulate that the state provide:

- a process for demonstrating explicit consideration and response to public input during the planning and program development process; and
- a process for seeking out and considering the needs of those traditionally underserved by existing transportation systems, such as low-income and minority households, which may face challenges accessing employment and other amenities.

ODOT's own *Public Involvement Policies and Procedures* document (December 1994) is more prescriptive, stating that:

- the Department will provide a 45-day public review of the draft STIP, and a 45-day public review of any major revision of the approved STIP;
- the Department will provide statewide opportunities for public comment on the draft STIP by scheduling at least two public meetings in each of ODOT's five regions prior to adoption of the program by the OTC; and
- the Department will consider all public comment on the draft STIP prior to adoption of the program by the OTC.

Public review meetings for this draft took place in November and December 2002. Comments were also taken through ODOT's website at: [www.odot.state.or.us/STIP](http://www.odot.state.or.us/STIP).

### **Local Governments**

The federal planning requirements (23 CFR 1410.216(b)) state that

- (1) MPOs shall be involved on a cooperation basis for portions of the STIP affecting metropolitan planning areas;
- (2) Indian Tribal Governments and the Secretary of the Interior shall be involved on a consultation basis for portions of the STIP affecting areas of the state under the jurisdiction of an Indian Tribal Government;
- (3) Federal lands managing agencies shall be involved on a consultation basis for the portions of the program affecting areas of the state under their jurisdiction; and

- (4) Affected local officials with responsibility for transportation shall be involved on a consultation basis for the portion of the STIP in non-metropolitan areas of the state.

### **Area Commissions on Transportation**

An Area Commission on Transportation, or ACT, is an Oregon Transportation Commission-sanctioned body composed of local transportation representatives, local elected officials, business people, and in some locales, members of the public, all representing the area.

ACTs provide a critical communication link between ODOT and local governments, the business community, and the public. ACTs propose and comment on policy set by the OTC, propose and endorse programs and projects, and provide an avenue to the OTC for citizens with transportation concerns. Information about Oregon's ACTs can be found on ODOT's website at:

[www.odot.state.or.us/involve/ACT.htm](http://www.odot.state.or.us/involve/ACT.htm). (See also the ACT map on page 18.)

### **STIP Stakeholder Committee**

In response to stakeholder input regarding the STIP process, the OTC convened a committee in December 2000 to identify and clearly articulate the current process used to develop a STIP, identify areas needing improvement, clarify points for public interaction, and address the role of ACTs in STIP development. The committee is known as the STIP Stakeholder Committee. Members include the Association of Counties; League of Cities; representatives of ACTs, MPOs, Councils of Government, and transit districts; AAA; 1000 Friends of Oregon; Oregon Environmental Council; FHWA; the Oregon Trucking Association; Freight and Public Transit Advisory committee members; and representatives from the ports and business communities and other state agencies. The committee is chaired by OTC member Stuart Foster.

While the committee work is ongoing, the Draft 2004-2007 STIP incorporates work already approved by the Oregon Transportation Commission: the "Interim Criteria".

All Modernization, Pavement Preservation and Bridge Preservation projects approved for the years 2006 and 2007 in this draft meet the Interim Criteria. The Interim Criteria section begins on page 248 of this document.

The committee work is ongoing. Immediate and longer-range process improvements have been identified. The committee will next formulate recommendations around these improvement areas. For further information on the STIP Stakeholder Committee, see: [www.odot.state.or.us/stakeholderstip/](http://www.odot.state.or.us/stakeholderstip/).

## **Community Solutions Team and Regional Partnerships**

The Community Solutions Team (CST) was formed in 1995 as a board to advise the Governor on community development issues. Members of the team are the five directors of the following agencies: Housing and Community Services, Department of Land Conservation and Development, Economic and Community Development Department, Department of Environmental Quality, and ODOT. The five agencies administer a host of programs that directly affect the livability of Oregon communities. The CST is actively involved in interagency community development issues across the state through nine regional teams, whose purpose is to provide coordinated state services rapidly, efficiently and effectively.

In addition to the CST regional teams, Regional partnerships bring together local, state, federal, non-profit and private community development partners to strategize solutions to complex, interjurisdictional community development issues from a region-wide perspective. The *Principles for State/Local Partnerships* (<http://communitysolutions.state.or.us>) provide a basis for working together. There are seven regional partnerships active statewide:

1. Northwest Regional Partnership - *Clatsop, Columbia, Tillamook and western Washington Counties*
2. Jackson and Josephine Regional Partnership - *Jackson and Josephine counties*
3. Lower John Day Forum - *Gilliam, Sherman, Wasco, Wheeler counties and Confederated Tribes of Warm Springs*
4. South Central Regional Partnership - *Klamath and Lake counties*
5. Mid-Willamette Valley Regional Partnership- *Marion, Polk, and Yamhill counties*
6. Southeast Regional Alliance - *Grant, Harney, and Malheur counties*
7. Baker/Morrow Regional Partnerships - *Baker & Morrow counties*

In some locations, the Partnership has the same membership as the Area Commission on Transportation. In other locations, Partnerships exist where ACTs do not.

## **Outreach Opportunities**

“Outreach” activities - focused discussions with transportation stakeholders, community groups and civic clubs, city and county public works officials and staff, and councils of governments (COGs) - are part of each ODOT region’s monthly public involvement activities and performance goals. These meetings provide the public opportunities to learn about and comment on ODOT’s programs, goals and challenges. Ongoing feedback from this interaction provides ODOT management with necessary guidance as they develop the biennial STIP funding proposal which is forwarded to the OTC.

Schedules of outreach activities are available on ODOT’s website at: [www.odot.state.or.us/involve/events.htm](http://www.odot.state.or.us/involve/events.htm).

As ODOT strives to best meet the transportation needs of the state with limited resources, these improved communication processes become critical for identifying issues and needs, prioritizing solutions, and implementing programs and projects.

**Summarization of Public Input on the  
Draft 2004-2007 Statewide Transportation Improvement Program (STIP)  
December 2002, January and February, 2003**

For the last several STIP updates, the Oregon Department of Transportation has actively informed transportation stakeholders and the general public about how the STIP is developed, and about the overall process, including the most opportune time to impact the course of transportation in Oregon, the programs funded, the projects selected, and the policies guiding these decisions. The message illustrates that the biggest impact comes through getting involved early in the planning processes, e.g., Transportation System Plan development, Corridor Plan development, and statewide plan development; the STIP is the end result of much planning effort.

The formation of Area Commissions on Transportation (ACTs) across most of the state has further changed the dynamic by which public comments are received, providing on-going opportunities for participation at the local level.

It may be concluded that these efforts have had an impact, as the number of people attending the meetings (738) has doubled from the last STIP public review period.

Most of the comments received centered around support or lack thereof for specific projects included, or excluded, in the draft STIP; funding issues; and the necessity to look for new ways to fund transportation needs.

**Statewide Comments:**

The Oregon Freight Advisory Committee provided comments regarding prioritization of projects for the 2004-2007 STIP, delineated by region. The committee's emphasis is on freight mobility projects that increase the efficiency and reliability of the state's roads, highways, and bridges, and projects that emphasize the increasing benefits of intermodal/multimodal linkages. The committee encourages freight mobility in all modes be given the highest priority for funding in the Final 2004-2007 STIP.

**Region Summaries**

---

**Region 1: Total Public Attendees: 111**

<b>Location</b>	<b>People Attending (excluding ACT/ODOT hosts)</b>
Scappoose .....	26
Tigard .....	15
Oregon City .....	37
Portland .....	14
Hood River .....	19

Five meetings were held for STIP public review in Region 1. The three meetings in the Metro region are summarized in this report.

**WASHINGTON COUNTY, Tigard, November 19, 2002.**

15 attendees.

**Letters Received:**

**N.P. DeMorgan, MD:** Concerned about the City of Tigard’s proposed extension of SW Wall Street and its affect on Fanno Creek and associated wetlands and wildlife in the area. Wants ODOT to work with the City to improve Hall Blvd. (state facility) and replace the Fanno Creek bridge near Tigard City Hall.

**Tualatin River Keepers:** Supports, as highest priority, the replacement of the Fanno Creek bridge on Hall Boulevard.

## Appendix 4: Metropolitan Transportation Improvement Program 2004-07

---

### General Comments:

- One person supports a fly over off ramp for the Timberline Ski Area/Lodge Access Road for eastbound Hwy 26 traffic similar to the improvements made at Mt. Hood Meadows. Also supports improvements to the intersections with Hwy 26 and the Government Camp Loop Road.
- One person concerned about impact of new development around Wilsonville e.g. Dammasch property and surrounding vicinity. Existing access to I-5 will be inadequate to facilitate new traffic. Supports Boeckman Interchange/overpass improvements.
- One person wants the transportation to be better served by rail and buses between the metro area and the north coast area. Expressed concern about the thousands expected for the Lewis & Clark celebration and that we don't have vehicles ready. Wants to know what the plan is to move all large businesses in Washington County to move their employees via public transportation. Can there be a fine if a concentrated transportation effort within the company is not carried out?
- One person frequently travels I-5 and I-205 from Lake Oswego to Salem. Concerned about traffic backups at the I-5/I-205 Interchange. Wonders about and has suggestions for modifying lane configurations on both roadways to relieve merge problems and backups.
- One person expressed concern about whether we are spending our transportation dollars wisely. Example provided: Photo of decorative rocks being affixed to the recently bikeway along the Willamette River in the Sellwood area. Also concerned that only auto/truck users are being taxed. Wants some way to tax bicyclists and transit riders to support those modes of transportation as well.

### Discussions:

Nick Wilson – newly elected Tigard City Councilman:

- Nick had been on the Tigard Planning Commission prior to this. He is interested in a new project in their TSP that designates a new connection from the intersection of Walnut and US 99W, easterly along Walnut, then northerly along Ash Ave, then easterly to the intersection of Hall Blvd and Hunziker. Hunziker provides access to SW 72<sup>nd</sup> Ave and OR 217. A consultant has determined this would relieve some of the traffic on US 99W through Tigard.
- He wanted to know if highway funds could be used to help in this project. I told him we could use our funds on a parallel city facility if it provided relief to the state system. However, this use is limited and with the overwhelming demand on our scarce dollars, it is unlikely we would participate to any great extent. The intersections of US 99W and Walnut, Hall Blvd and Hunziker, and our ramp terminus at SW 72<sup>nd</sup> and Hunziker vicinity would obviously involve us and may provide some opportunity to contribute financially. His best approach is to go through his city staff and have them pursue normal funding channels such as Metro and our local programs.
- Obvious problems with this route are the same as the proposed Wall St extension in that a new crossing of Fanno Creek and the Commuter Rail is necessary.

#### ***Appendix 4: Metropolitan Transportation Improvement Program 2004-07***

---

Brian Wegener – Tualatin River Keepers:

- Brian is concerned about the bridge crossing Fanno Creek in Tigard (on Hall Blvd between Burnham and O'Mara). He says the narrow span restricts the flow and as a result during flood events the structure is overtopped and the road closed (1996 flood for sure). He believes a longer span will allow the creek to flow naturally. He thinks the bridge is in danger of being washed out. He is also concerned with the backwater created by the bridge during flood events harming the environment. He also left a detailed letter at the meeting.
- I told him the bridge was not on any short-term repair or replacement list. And, considering the problem we are experiencing with shear cracking on several of our major structures throughout the state, I wouldn't expect to see this bridge surface as a viable candidate for replacement anytime soon.
- This is bridge #04968 on Beaverton-Tualatin Hwy No 141. I asked Scott Leisinger to see if the bridge has any problems and is on a future replacement list.

Gene Reddemann – Wilsonville citizen:

- He is concerned about future traffic problems in Wilsonville because of the proposed development. He wanted to know if we were planning to construct a new interchange on I-5 at Boeckman Rd.
- I told him we were not in favor of a new interchange and thought the existing system could handle the increase with improvements to the local system including a Boeckman Tooze connector and improvements to the Wilsonville Interchange.
- Marah Danielson was in attendance and told him she had just had a update on the area that morning and indeed, the existing system with improvements could handle projected traffic for 20 years.

Pauline Goldstein – Lake Oswego citizen:

- She stated there is a problem driving northbound on I-5 and utilizing the newly configured Kruse Way Interchange. She couldn't remember exactly what her concerns were, but she would drive it again with a scribe and get back to us. She realizes the constraints with the Carman Interchange just to the south still creates a weaving problem.

Eric Clark – Lake Oswego citizen and legislative staff to the state Democrats:

- He had a question on the state bridge problem and wanted to know if we were pursuing seismic retrofits on bridges that were cracking and going to be replaced.
- Ron Kroop and I explained that such a scenario would not happen, however, if the bridge cracking could be fixed without replacement – such as post-tensioning – and had some seismic problems, then we would pursue the retrofit.
- Ron also went into detail on various other bridges and their problems.
- Eric relayed a potential problem with a bridge expansion joint southbound on I-5 at the Tualatin River crossing. Ron will check into it and get back with Eric directly.

## Appendix 4: Metropolitan Transportation Improvement Program 2004-07

---

**CLACKAMAS COUNTY**, Oregon City, November 20, 2002.  
37 attendees.

### **Letters Received:**

**City of Happy Valley:** Wants ODOT to focus this STIP update on four critical transportation improvement projects/corridors in Clackamas County:

- So. Corridor Transit (I-205 & Milwaukie high capacity transit)
- Sunrise Corridor
- I-205 Capacity Improvements
- Sunnyside Road

They also request that all Clackamas Co. projects identified in the draft STIP be constructed with special consideration of the following two to be advanced:

- OR-224: I-205 – SE Evelyn St. (key #12904)
- OR-224: Clackamas Hwy @ Carver Rd. (key #13040)

**Park Place Neighborhood Assn.:** Wants attention to be given to the I-205 and Hwy 213 area. This includes the Washington St. and Redland Rd. intersections of Hwy 213 as well as I-205 north and southbound from I-5 through the Hwy 213 interchange. Traffic backs up all directions in the peak AM & PM traffic.

**Hwy. 26 Safety Corridor Citizens Advisory Commission:** Supports the project in draft STIP adding left turn channelization between Wildwood and Welches on Hwy 26.

### **General Comments:**

- Six people have expressed major concerns about an increase in unsafe left turn conditions that have resulted in numerous rear-end accidents on 99E south of the Canemah District of Oregon City (see comments sheets for details). Suggested fixes include reduced speed, additional signing, rumble strips, left turn lane. Those people are: Dorothy Andersen, Joe Scheidegger, Cynthia Bendix, Jack Sikking, Shelly Reed, & unknown commenter.
- One person (Ariel Mars – Transportation Chairman of Carus CPO) wants more involvement of ODOT in the future of Hwy 213 from Oregon City UGB to Molalla UGB. Wants representatives to address this.
- One person (Eugene Schoenheit) has raised a maintenance issue. There is an inlet that sits 3 to 4” below grade in the travel lane of SE 82<sup>nd</sup> Ave. (OR-213 Cascade North) southbound on the westerly edge near Harmony Rd. (See sketch map provided by commenter).

### **Discussions:**

City of Wilsonville was concerned about their OTIA project (Boeckman – Tooze) appearing in the draft STIP without Metro’s commitment showing. (Told them ODOT does NOT have the authority to add MTIP project commitments without them being

#### Appendix 4: Metropolitan Transportation Improvement Program 2004-07

provided by Metro.) Also concerned about their SMART Park & Ride project. Wanted to know where the funding was for construction. Told them ODOT was not providing them these funds. Told them that if they were coming from FTA directly we hadn't been made aware of them and if they expected them through the MTIP process that had not been finalized yet. Also reminded them that they have NOT obligated the funds identified in the 02-05 STIP for R/W purchase for their Park & Ride. (Follow-up telephone conversation held with Dan Hoyt, Economic Development Director. Went over same as above, but added that their SMART TDM funds for 2002 also were not obligated and that the City needs to do that ASAP.)

Following are Thomas Picco's, (ODOT Planner) notes from conversations he had. These individuals also provided written comments.

- Discussed planned/potential projects along OR 213S (Hwy 160) with Ariel Mars, President Carus CPO. She expressed interest in the provision of left-turn pockets at selected intersections along corridor (e.g., Carus Rd., Spangler Rd.). Also expressed interest in additional climbing lanes/passing lanes along corridor (e.g., between Leland Rd. and Henrici Rd.). Ariel Mars inquired about 'Green Corridor' designation along corridor between Oregon City and City of Molalla. A TGM grant has been awarded to Clackamas County to study this designation, and Ariel is on the TAC.
- Discussed planned/potential improvements to Park Place interchange (OR 160 x I-205) with citizen. Concern with congestion at this interchange. Congestion may be related to current construction in vicinity (adding 3rd SB lane from I-205 off-ramp to Abernethy Rd. Noted that a Phase 1 improvement to this interchange is listed in the Metro RTP (Financially Constrained section), but no funding has been identified, and is not in proposed 2004 - 2007 STIP.

Jan York, Dale York & Kevin Boyd:

- Location: 99E between Canby & Oregon City, just north of South End Road
- Issues: 1) Vehicles turning left off 99E are in jeopardy of being rear-ended. 2) After turning off 99E, vehicles cross the RR tracks. The tracks were raised and the pavement is too abrupt/short & steep to easily cross them. Vehicles high center, boats on trailers have had propellers knocked off.
- Solution: Want two northbound left turn lanes for driveways serving –1) seven houses and 2) two homes and Coalca Landing State Park and a third left turn lane for southbound to serve Pearson Art Gallery.
- Comments: Has attended meetings and written requests since 1990. Loaned me her file, which will be copied and returned.

Jack Sikking & seven others:

- Location: 99E @ "String City" south of Canemah -- MP 14.75
- Issue: 99E is four lanes and when southbound vehicles are turning left into the Mobile Home Village they get rear-ended.
- Solution: Want a left turn lane, or something to get drivers' attention. Suggested rumbles strips, buttons, flashing yellow light, more and bigger signs.

#### **Appendix 4: Metropolitan Transportation Improvement Program 2004-07**

---

- Comments: There is one sign but it's small. Within a 12-mile (Canemah to South End Rd.) safety zone that was designated six years ago, when Larry Sowa was in legislature.

Cam Gilmour, Executive Director, Clackamas County Dept. of Transportation & Development:

- Issue: Sees need for additional investment in transportation to accommodate increasing traffic demand.
- Solution: 1) Wants ODOT to look @ capacity on I-205, 2) South Corridor Transit, 3) Sunrise Corridor, 4) Sunnyside Corridor.
- Supports all that's in the draft STIP and: 1) Wants 99E @ Territorial Rd moved from 06 to 04, 2) Wants 224 @ Carver Rd. moved from 07 to 06.
- Comments: Pulled together business groups: North Clackamas County Chamber of Commerce; Clackamas County Board of Commissioners; Clackamas County Economic Development Commission & Clackamas County Business Alliance; and developed consensus regarding priorities for transportation in the County.

Jerry Smith, Chair, Clackamas County Economic Development Commission:

- Issue: Transportation projects are critical to alleviate current bottlenecks and to provide adequate transportation services in areas of the county now under consideration for expansion of the Metro Urban Growth Boundary.
- Solution: 1) South Corridor Transit, 2) I-205 Capacity Improvements, 3) Sunnyside Road: 152<sup>nd</sup> to Hwy. 212, 4) Sunrise Corridor
- Supports all that's in the draft STIP and: 1) Wants 99E @ Territorial Rd moved from 06 to 04, 2) Wants 224 @ Carver Rd. moved from 07 to 06
- Comments: Submitted letter.

Rob Wheeler, chair, Government Affairs Committee, North Clackamas County Chamber of Commerce:

- Issue: Pleased that Metro & ODOT have funded preliminary engineering for the Sunrise Corridor in the current STIP and the next phase of the Sunnyside Rd. project as an OTIA project. Wants four other projects that are necessary to provide adequate transportation service for planned urban development and a strong economy.
- Solution: 1) South Corridor Transit, 2) Sunrise Corridor, 3) I-205 Capacity Improvements, 4) Sunnyside Road: 152<sup>nd</sup> to Hwy. 212.
- Supports all that's in the draft STIP and: 1) Wants 99E @ Territorial Rd moved from 06 to 04, 2) Wants 224 @ Carver Rd. moved from 07 to 06
- Comments: Submitted letter.

Commissioner Bill Kennemer, Clackamas County Board of County Commissioners:

- Issue: Applauds Metro & ODOT for funding preliminary engineering for the Sunrise Corridor in the current STIP and the next phase of the Sunnyside Rd. project as an OTIA project. Wants this update to focus on four critical projects to alleviate current bottlenecks and to provide adequate transportation services in areas of the county now under consideration for expansion of the Metro Urban Growth Boundary.

#### **Appendix 4: Metropolitan Transportation Improvement Program 2004-07**

---

- Solution: 1) South Corridor Transit, 2) Sunrise Corridor, 3) I-205 Capacity Improvements, 4) Sunnyside Road: 152<sup>nd</sup> to Hwy. 212.
- Supports all that's in the draft STIP and: 1) Wants 99E @ Territorial Rd moved from 06 to 04, 2) Wants 224 @ Carver Rd. moved from 07 to 06
- Comments: Submitted letter.

David Marks, Clackamas County Business Alliance:

- Issue: Pleased that Metro & ODOT funded preliminary engineering for the Sunrise Corridor in the current STIP and the next phase of the Sunnyside Rd. project as an OTIA project. Wants three additional high-priority projects in this STIP update to alleviate current bottlenecks and to provide adequate transportation services in areas of the county now under consideration for expansion of the Metro Urban Growth Boundary.
- Solution: 1) South Corridor Transit, 2) I-205 Capacity Improvements, 3) Sunnyside Road: 152<sup>nd</sup> to Hwy. 212.
- Supports all that's in the draft STIP and: 1) Wants 99E @ Territorial Rd moved from 06 to 04, 2) Wants 224 @ Carver Rd. moved from 07 to 06
- Comments: Submitted letter.

**MULTNOMAH COUNTY**, Portland, November 21, 2002.

14 attendees.

No letters received.

No general comments received.

#### **E-mail Comments Received:**

- Citizen inquired about not seeing projects in the STIP that would support the I-5 Trade corridor Study. Gave him City of Portland's contact for his concerns about the Greeley and Going Streets issues. Also explained that we have a project under design to deal with the I-5 improvements. The same project was not in the draft STIP as we had no money for the right of way or construction phases and hopefully we would be receiving federal discretionary funds in the future.
- Citizen inquired about existing 2003 project status on Beaverton/Hillsdale Hwy. And the safety improvements included. Project to go to bid in July or perhaps earlier. There will be signal improvements, sidewalk improvements to foster continuity, and restriping as safety elements being covered under this preservation project.
- Citizen inquired about improvements at the intersection of Sandy Blvd. (US-30B) and NE 33<sup>rd</sup> Ave. Gave him the name of a City of Portland contact as this section of roadway is in the process of being transferred from ODOT to City of Portland ownership.

The City of North Plains would like to provide this input regarding the projects included in the STIP for improvements to the subject interchange:

#### ***Appendix 4: Metropolitan Transportation Improvement Program 2004-07***

---

- The interchange not only provides the access to North Plains, but is also the main access from Hwy 26 to Forest Grove and Cornelius. Traffic is becoming exceedingly heavy on the interchange. Please check the traffic volumes to see how the traffic has increased.
- The City would like to see the projects that are funded in 2005 and 2007 moved up to earlier years, and would like the State to consider complete reconstruction of the interchange and widening of the bridge.
- The OTC in approving the Interchange Area Management Plan for Jackson School Road has added traffic to Glencoe Road Interchange in an attempt to minimize the traffic using Jackson School Road. The IAMP does recommend that Glencoe Road Interchange be placed higher in the ranking because of the impact upon the interchange by the restrictions on Jackson School Road.

In summary, the City of North Plains requests:

- Placing replacement of the Glencoe Road Interchange on the STIP.
- If that is not feasible, placing improvements to the ramps and traffic signals in the year 2004.

**SUMMARY OF PUBLIC INVOLVEMENT FOR TRIMET TIP,  
ANNUAL SERVICE PLANNING**

# Metro seeks comments on transportation plans

Metro wants the public's help in whittling a \$93 million wish list of transportation projects to fit the \$54 million in federal money available to the Portland area in 2006 and 2007.

About \$18 million is committed to Interstate and south metro light-rail lines, commuter rail in Washington County and transportation infrastructure for the North Macadam area in Southwest Portland and the Boeckman Road project in Wilsonville.

That leaves \$36 million to spend on a long list of possibilities nominated by area governments, ranging from St. Johns pedestrian im-

provements in North Portland to Sunnyside Road upgrades in Clackamas County.

Metro is the regional government that oversees land use and transportation for 24 cities and the urban parts of Multnomah, Clackamas and Washington counties. Leaders decided last year to direct money to projects that help revitalize urban cores and spark industrial development.

Comments will be taken until May 16. The transportation committee and Metro Council will make their final choices in June.

—*Laura Oppenheimer*

## METRO PUBLIC FORUMS

Metro will have three public forums to discuss the options:

- ♦ 5 to 7 p.m. today, Metro Council chambers, 600 N.E. Grand Ave., Portland
- ♦ 5 to 7 p.m. Tuesday, Beaverton Service Center, 12500 S.W. Allen Blvd.
- ♦ 5 to 7 p.m. April 21, Pioneer Community Center, 615 Fifth St., Oregon City

## INFORMATION

To receive information on the projects or voice an opinion:

- ♦ Visit: [www.metro-region.org](http://www.metro-region.org)
- ♦ Call Metro's transportation hot line at 503-797-1900, Option 3
- ♦ Call a Metro staff member at 503-797-1839
- ♦ Fax: 503-797-1911
- ♦ E-mail: [trans@metro.dst.or.us](mailto:trans@metro.dst.or.us).
- ♦ Mail: Metro Planning Department, Attn. Ted Leybold, 600 N.E. Grand Ave., Portland, OR 97232

# Introduction

**METRO**

PEOPLE PLACES  
OPEN SPACES

**Introduction**

This report is a compilation of public comments regarding funding priorities for the fiscal years 2004-2007 Metropolitan Transportation Improvement Program (MTIP) received in spring 2003. Public input was solicited from April 10 through May 16, 2003. Three listening posts (informal opportunities to comment directly to decision-makers) were held during this time: April 14 in Portland, April 15 in Beaverton and April 21 in Oregon City. Comments have been summarized from these meetings, plus written communications sent to Metro (mail, fax and e-mail) and from the transportation phone hotline. A new way to comment, on the Metro web site, was instituted this year. Anonymous letters and comments are not included in this summary.

A public hearing will be held by the Metro Council on Thursday, June 5, 2003. Written comments will be provided as an addendum to this report.

Many thanks to the citizens, businesses and governments of the region who took the time to review and make comments on the proposed projects in the Transportation Priorities 2004-07 funding process.

# Section 1 Summary of comments

**METRO**

PEOPLE PLACES  
OPEN SPACES

## **Summary of Public Comments**

This report provides a summary of public comments received on project and program funding applications in the Transportation Priorities 2004-07 program. All comments received during the public comment period, April 10 through May 16, 2003 are included.

Transportation Priorities 2004-07 is a regional transportation funding program that identifies projects to be constructed or programs to be funded with federal transportation revenues over the next four years. Local jurisdictions and partners submit transportation projects to Metro for funding consideration. Eligible projects range from road reconstruction and modernization to transit, bicycle trails, boulevards, pedestrian improvements, green streets and planning projects.

Three public comment listening posts were held in April. All comments were summarized and may be found in Section 2. Comment cards from the meetings may be found under Section 3, Written Comments.

The Metro Council will hold a public hearing on Thursday, June 5, 2003. Written comments submitted at the hearing will be printed in an addendum to this report.

## **Comments in General**

The residents of the region spoke out in record numbers during the Priorities 2004-07 comment period. The number and range of comments indicates a growing interest in shaping transportation improvements in the metropolitan area.

Comments were received from almost 1,000 residents and business owners around the region on the proposed transportation projects. Bike/trail, green streets and pedestrian projects showed the most interest, followed by road reconstruction, road modernization and transit. Comments on rail projects indicate a budding interest in this form of travel.

Roads were not left out of the equation. The need for Road Reconstruction and Road Modernization projects was high on the list of comments, followed by Transit and Boulevard projects.

Overall, these comments indicate the desire for a balanced transportation system with a choice of safe and convenient travel modes.

# Section 2 Summary by project

**METRO**

PEOPLE PLACES  
OPEN SPACES

**SUMMARY OF COMMENTS RECEIVED ON PROJECTS**

A total of 984 comments, oral and written, were received on specific transportation projects.

The most support was shown for the Bike/trail projects (217 comments), Green Streets (166 comments), Pedestrian projects (141 comments) and Road Reconstruction (127 comments). Road Modernization received 96 comments, Transit projects received 93 comments and Boulevard projects received 77 comments.

Fewer comments were received on Transit Oriented Development (TOD) projects (31), Regional Travel Options (RTO) projects (16), Planning projects (15), Freight projects (4) and Bridge painting (1).

Comments were received on a balance of project modes around the region, with Bicycle/trails (especially the Trolley Trail) and Green Streets (especially Cully Boulevard) receiving the most total comments of any projects during this comment period.

**SPECIFIC COMMENTS BY MODE**

**Bike/Trail projects**

A total of 217 comments (22 percent) were received on all of the bicycle/trail projects, with the most comments received on the Trolley Trail (83).

**Trolley Trail: Jefferson to Courtney (83)**

A large number of comments were received supporting the Trolley Trail. Comments said it would complete a 20-mile loop connecting Gladstone, Milwaukie and the Clackamas Town Center with the Springwater Trail, provide wetland and gardening access for schools and retirement centers, and offer a bridge between communities.

**Beaverton Powerline Trail (33)**

This trail received many positive comments for an area lacking such trails. Comments said it would connect recreation and shopping areas to light rail stations.

**Eastbank Trail/Springwater Corridor Gaps (23)**

Much support was shown for completion of this trail, finishing a popular bike and pedestrian trail system.

**Washington Square Trail (22)**

This is seen as an important land-use connection to a regional center location, connecting the Fanno Creek Greenway Trail to the Washington Square Mall.

**Rock Creek Trail (20)**

Comments indicated this is an important regional connection to light rail stations and parks where safety is a critical consideration.

**Willamette Greenway (19)**

This trail is said to provide a cost-effective, crucial link between downtown Portland and the developing Macadam area.

**Gresham/Fairview Trail (17)**

Comments indicated this trail is a regionally significant path that serves as the primary north/south route between the Springwater Trail and the Marine Drive Trail, linking many land uses, park and open spaces, transit and six regional trails.

**Pedestrian Projects**

A total of 141 comments (14 percent) were received on eight pedestrian projects. The Tacoma project received the most comments (83), while Central Eastside Bridgeheads received 33 and St. Johns Pedestrian Improvements received 21.

**Tacoma Street (83)**

Many individual comments were received on this project. Improvements already made have reduced traffic congestion. Final improvements to Tacoma Street will make the Sellwood neighborhood more livable and the street safer for pedestrians. One comment said the Tacoma Street project was designed with 2040 in mind. Many residents in the area said they worked with planners to design their vision of the street.

**Central Eastside Bridgeheads (33)**

Many pedestrians and bicyclists supported this set of bridge access improvements, which would enable them to get across the bridges to downtown Portland more safely. In addition, comments said that this project would improve traffic flow and freight movement and allow trucks to move more safely and efficiently through key intersections.

**St. Johns Town Center Pedestrian Improvements (21)**

Residents said that this project would make the St. Johns area more livable and help freight move through until a long-term solution can be developed. Crossing certain intersections is now very difficult for pedestrians, bicyclists, buses, cars and trucks.

**Green Streets Projects**

A total of 166 comments (17 percent) were received on the four projects proposed for green street improvements. Cully Boulevard received 150 post cards and comments, with Yamhill Reconstruction (9) and Beaver Creek Culverts (7) receiving far fewer.

**Cully Boulevard Reconstruction: Prescott to Killingsworth (150)**

More than 100 post cards and individual comments were received on this project. Comments focused on the need for safer conditions for pedestrians, especially children walking to school or to the store along Cully, as there are no sidewalks, considerable traffic and poor lighting at night. The five-way stop at the intersection of NE Cully and Prescott is difficult to negotiate. This reconstruction project is seen as transforming the entire neighborhood and it will provide better access to affordable housing and nearby employment centers.

**Yamhill Reconstruction (9)**

Many comments were received requesting the improvements proposed for this street. This street is seen as very narrow and unsafe for the amount of cars and pedestrians that use it. There are neglected dwellings, abandoned vehicles and missing speed signs along Yamhill. This street is seen as needing "all the help we can get."

**Beaver Creek Culverts: Troutdale, Cochran, Stark (7)**

Comments said that replacement of three culverts is needed for restoring fish habitat for listed salmonids while providing necessary road improvements in the future.

**Road Modernization Projects**

A total of 96 comments (10 percent) were received on the 21 proposed road modernization projects. The most comments were received in support of the 223<sup>rd</sup> Avenue Railroad Under Crossing (20), Sunnyside Road (16), Murray Boulevard: Scholls Ferry to Barrows (16), Highway 8 Intersection (13) and Boeckman Road (11).

**223<sup>rd</sup> Avenue Railroad Under Crossing (20)**

Many comments said this is a critical project for East Multnomah County and the Fairview Town Center. The area north of the under crossing is planned to have industrial development providing 7,000 jobs. Comments indicated the under crossing is necessary to provide safe, unconstrained access to this industrial area as well as safe bicycle and pedestrian access to Blue Lake Regional Park.

**Sunnyside Road (16)**

Comments indicated funding for this project is critical for handling existing traffic plus the expected growth from the Rock Creek area in Happy Valley and the Damascus UGB expansion area.

**Murray Boulevard: Scholls Ferry to Barrows (16)**

This project is said to be the key to proving access to the 110-acre Progress Quarry Planned Unit Development, which will include town homes and apartments as well as open spaces that include a forested lake, linear park, wetlands and large grove of trees.

**Highway 8 Intersection (13)**

Comments indicated this intersection at 10<sup>th</sup> Avenue and TV Highway is unsafe for the large number of pedestrians, cars, trucks and buses that use it. This project would make a more efficient intersection and reduce the many accidents that happen here. The project is seen as absolutely vital to the safety and economic survival of the community.

**Boeckman Road: 95<sup>th</sup> to Grahams Ferry (11)**

This project received many comments and is seen as a vital connection in Wilsonville for developing their urban center and accessing existing employment areas.

**Road Reconstruction Projects**

A total of 118 comments were received (12 percent) on five proposed projects, with Division (79) and Lake Road (40) receiving the most comments.

**Division: 6<sup>th</sup> to 39<sup>th</sup> (Streetscape Plan to 60<sup>th</sup>) (79)**

Many individual comments were received on the Division reconstruction project. Division is seen as neglected and dangerous compared with Hawthorne and Belmont. With Division developing a unique identity, these improvements are seen as necessary to relieve traffic congestion and provide pedestrian and bicycle amenities and safety. "This corridor is a perfect candidate for significant redevelopment."

**Lake Road: 21<sup>st</sup> to Highway 224 (PE and ROW) (40)**

Many comments and post cards were received on the Lake Road project, which would reconstruct access between Milwaukie Town Center, the east Milwaukie industrial area and the Clackamas Regional Center. It would also provide needed bicycle and pedestrian facilities between those areas and to Milwaukie High School and Rowe Junior High.

**Transit Projects**

Ninety-three comments (9 percent) were received on all of the proposed transit projects, with the South Metro Amtrak Station receiving the most total comments (40), followed by the Clackamas Regional Center TOD (17) and Frequent Bus Corridors (11).

**South Metro Amtrak Station (40)**

Many comments were received on the Amtrak Station, saying it would benefit the entire area by providing a second train station in the greater metropolitan area. The station would encourage more tourism and get drivers off the congested freeways as well as promote needed redevelopment of the historic city center. Two comments were against this project, noting that more people drive cars than take the train.

**Clackamas Regional Center TOD/P&R (PE only) (17)**

This project would facilitate the construction of a light rail station next to Clackamas Town Center and encourage the planned expansion of the center into a mixed-use regional center. The area is seen as a major cross-point for commuters.

**Frequent Bus Corridors (11)**

Comments in favor of this TriMet project cited the need for major bus stop improvements and transit signal priority systems in cities around the region. One comment said it was important that transit dependent populations are within walking distance of a bus line in order to reach jobs, medical services and shopping.

**Boulevard Projects**

A total of 77 comments (8 percent) were received on seven proposed boulevard projects, with the most comments focusing on McLoughlin (31) and Killingsworth (22) projects.

**McLoughlin: I-205 to Hwy 43 Bridge (31)**

Comments said that this project upgrades McLoughlin within the Oregon City Regional Center to a boulevard and helps advance this regional center. One 10-year resident said the project will improve commerce for the city while beautifying the waterfront. One comment was against this project as a waste of taxpayer's money.

**Killingsworth: Interstate to MLK (PE only) (22)**

Resident's comments indicated that Killingsworth is a gateway to PCC, a key east-west arterial and that it needs improvements to help transform the area into a vibrant mixed-use main street. One comment opposed indicated that Interstate MAX funds should only be used for street work within one block of the light rail alignment.

**Transit Oriented Development Projects**

Thirty-one comments (3 percent) were received in support of TOD projects in the region, with most comments regarding the Metro TOD Program (21).

**Metro TOD Program (21)**

Comments indicated that the Transit Oriented Development Program at Metro has stimulated the development of many of the region's most successful projects. TOD expenditures were said to increase investor and lender confidence in an area's potential. One comment said the TOD program was essential in bringing a difficult project to completion.

**Regional Travel Options (RTO) Projects**

Sixteen comments (2 percent) were received on all of the proposed RTO projects in the region to reduce the use of the automobile in the region. The most comments were in support of the Interstate Avenue TravelSmart project (7).

**Interstate Avenue TravelSmart (7)**

Comments indicated that bringing "individualized marketing" of existing transportation options to local residents could be successful, as it is in Europe and Australia. The Interstate TravelSmart project will bring information on transportation options to a critical, under-resourced corridor. Interstate TravelSmart is seen as a cost-effective method for influencing individual and community behavior.

**Planning Projects**

Fifteen comments (2 percent) were received on seven proposed planning projects, with the most comments received on Union Station Development (10).

**Union Station Multi-Modal Facility Development (10)**

This project is seen as preserving Union Station to encourage safe, multi-modal public transportation and provide a worthy "front door" to Portland for thousands of rail passengers. It would facilitate connections between Amtrak, TriMet bus and MAX, Greyhound bus, taxis and the future Portland Streetcar Broadway Bridge line.

**Freight Projects**

Four comments were provided on one of the two freight projects:

**MLK: Columbia To Lombard (PE only)(4)**

This grade-separation project is seen as greatly enhancing rail operations and improving slow highway traffic as well. One comment said it was part of a well thought-out freight system and will improve the flow of freight through the city.

**Bridge Projects**

**Broadway Bridge (Span 7)**

One comment was received on the proposed painting of the Broadway Bridge Span 7, indicating it would complete full rehabilitation of the bridge for long-term preservation.

Metro serves 1.3 million people who live in Clackamas, Multnomah and Washington counties and the 24 cities in the Portland metropolitan area. The regional government provides transportation and land-use planning services and oversees regional garbage disposal and recycling and waste reduction programs.

Metro manages regional parks and greenspaces and owns the Oregon Zoo. It also oversees operation of the Oregon Convention Center, the Portland Center for the Performing Arts and the Portland Metropolitan Exposition (Expo) Center, all managed by the Metropolitan Exposition Recreation Commission.

## ***Appendix 4: Metropolitan Transportation Improvement Program 2004-07***

### **Summary of Public Hearing Comments June 6, 2003**

#### **Introduction**

Transportation Priorities 2004-07 is the regional process to identify which projects identified in the Regional Transportation Plan will receive regional flexible funds based on refined policy direction adopted by the Joint Policy Advisory Committee on Transportation and the Metro Council in July 2002. Regional flexible funds come from two different federal grant programs: the Surface Transportation and Congestion Mitigation/Air Quality programs.

Approximately \$53 million is expected to be available to the Portland metropolitan region from these grant programs for the years 2006 and 2007. Of this amount, \$18 million has been previously committed to development of light rail in the Interstate Avenue and South corridors, commuter rail in Washington County, transportation infrastructure supporting development of the North Macadam area and the Boeckman Road project in Wilsonville.

The Transportation Priorities 2004-07 process will consider whether to confirm these prior commitments and identify which transportation projects and programs will receive the remaining \$35 million.

In mid-May, JPACT provided Metro staff with policy direction on narrowing the first cut list to match the amount of funding available. On May 27, 2003, the Metro Council released the Metro staff recommendation for public comment. On June 3, 2003, the Transportation Policy Advisory Committee reviewed and approved some changes to the Metro staff recommendation. The [Metro staff and TPAC recommendations](#) and details about how both recommendations were developed are available to download.

On June 5, 2003, the Metro Council received public testimony on both recommendations as part of a public hearing. Comments received during the public hearing will be forwarded to JPACT and the Metro Council for consideration.

This summary includes the oral and written comments received at this meeting or sent to Metro by this date. A total of 161 comments were received at the hearing.

In addition, a small group of comments was sent to Metro but missed being included in the May 23, 2003 compilation of public comments. These comments are also summarized below and have been added to the total comments.

#### **Public Hearing Comments in General**

Most comments were in favor of specific projects or programs including the St. Johns Pedestrian Improvements, the 223<sup>rd</sup> Avenue Railroad Under Crossing, Sunnyside Road project, Gresham Civic Station and the Transit Oriented Development program. Five comments supported the Staff Recommendation in general. Several comments were in favor of a balanced, multi-modal transportation system.

## ***Appendix 4: Metropolitan Transportation Improvement Program 2004-07***

### **Comments by Mode**

#### **Transit Oriented Development (37 comments)**

Thirty-four comments and letters were received in favor of funding the Metro Transit Oriented Development (TOD) program, as provided in the Staff Recommendation. Three comments favored the Urban Center Program.

#### **Road Modernization (18 comments)**

Many comments were received in support of two projects that were not included in the Staff or the TPAC recommendations - the 223rd Avenue Railroad Undercrossing and Sunnyside Road. Nine comments were in favor of the 223<sup>rd</sup> Avenue Railroad Under Crossing and nine comments supported the Sunnyside Road project. Two comments were received on the 10<sup>th</sup> Avenue East Main to Baseline project.

#### **Bike/Trail (15 comments)**

A total of 15 comments were received at the hearing on Bike/Trail projects. Five projects were in support of the Trolley Trail and three projects were in support of the Beaverton Powerline Trail. Three comments supported the Rock Creek Trail, which was not included in the Staff Recommendation or TPAC recommendation. Four comments were in favor of bicycle access and improvements in general.

#### **Pedestrian projects (13 comments)**

A total of 13 comments were received on all Pedestrian projects. Eight comments were in favor of funding the St. Johns Pedestrian Improvements, which was included in the Staff recommendation, but not included in the TPAC recommendation. Three comments favored the Tacoma Street project, which was not included in the Staff or TPAC Recommendations. The Central Eastside Bridgeheads received two comments of support.

#### **Transit projects (11 comments)**

Eleven comments supported transit projects, including eight for the Gresham Civic Station TOD funding in the Staff Recommendation.

#### **Road Reconstruction (8 comments)**

Seven comments were received on the Division Street project, which was included in the Staff and TPAC recommendations. One comment was received on the Lake Road project, which was not included in the Staff or TPAC Recommendations.

#### **Boulevard projects (3 comments)**

Three comments were in support of the boulevard retrofit of McLoughlin Boulevard from I-205 to Highway 43 Bridge project in Oregon City.

## ***Appendix 4: Metropolitan Transportation Improvement Program 2004-07***

### **Other projects**

Two comments were received on Freight projects and two comments were received on the Regional Transportation Options TDM Core program. One comment was in favor of the Powell/Foster Corridor Plan. No comments were received on the Bridge and Green Streets projects.

### **Additional comments received during public comment period**

Twenty comments were received by May 10 but inadvertently left out of the May 23rd Public Comment Summary. They included 15 letters in favor of the 223<sup>rd</sup> Avenue Railroad Under Crossing and three letters in favor of the Division Street project. One comment was in favor of the Tigard Pedestrian Improvements and one in favor of the St. Johns Pedestrian Improvements.

A petition, signed by 31 people, was received after the close of the public comment period but prior to the Metro Council public hearing. The petition is in favor of Frequent Bus Corridor improvements, particularly highlighting the need for safer street crossings to improve access to bus stops on Tualatin Valley Highway between Hillsboro and Beaverton.

### **Total of All Public Comments**

A total of 1,145 public comments were received on all projects during the public comment period (April 16 – May 10, 2003) and during the public hearing on June 5, 2003. Overall interest in this cycle of funding was high, with nearly twice as many comments received compared to the previous Transportation Priorities funding process.

Thank you to all who took the time to provide comments for projects and programs in the Transportation Priorities 2004-07 program.

# Appendix 5

## 2004 Regional Transportation Plan: Adopting Resolution 03-3380A

BEFORE THE METRO COUNCIL

FOR THE PURPOSE OF DESIGNATION OF ) RESOLUTION NO. 03-3380A  
THE 2004 REGIONAL TRANSPORTATION )  
PLAN AS THE FEDERAL METROPOLITAN )  
TRANSPORTATION PLAN TO MEET ) Introduced by Councilor Park  
FEDERAL PLANNING REQUIREMENTS )

WHEREAS, federal law requires Metro to demonstrate every three years that its Regional Transportation Plan (“RTP”) conforms to the Clean Air Act; and

WHEREAS, the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency last found the RTP to conform to the requirements of the Clean Air Act on January 26, 2001; and

WHEREAS, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Boundary; and

WHEREAS, a post-adoption air quality analysis must demonstrate conformity with the federal Clean Air Act for continued federal certification; and

WHEREAS, the Metro Council has received and considered the advice of its Joint Policy Advisory Committee on Transportation and its Metro Policy Advisory Committee, and all proposed amendments identified in Exhibit “A” have been the subject of a public review period that began October 31, 2003, and ended December 10, 2003; and

WHEREAS, the Council held a public hearing on the 2004 RTP on December 4, 2003; now therefore,

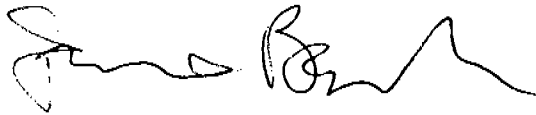

BE IT RESOLVED that the Metro Council:

1. The 2004 Regional Transportation Plan (“RTP”) shall be the federal Metropolitan Transportation Plan.
2. The map in Part 1 (Policy Update) of the 2004 Regional Transportation Plan Update shall be the Metropolitan Planning Organization Planning Area Boundary for purposes of the federal Metropolitan Transportation Plan.

3. The Chief Operating Officer shall revise the 2004 RTP, attached and incorporated into this resolution as Exhibit A (Parts 1, 2, and 3), as recommended by the Transportation Planning Advisory Committee to the Joint Policy Advisory Committee in "Summary of Public Comments: Receive October 31, 2003 through December 4, 2003," dated December 5, 2003, attached and incorporated into this resolution as Exhibit B, and in "Supplemental Public Comments: Received December 5, 2003 through December 10, 2003," dated December 11, 2003, attached and incorporated into this resolution as Exhibit C.

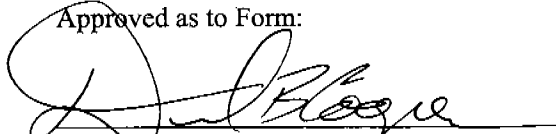

4. The Chief Operating Officer shall submit this resolution, the 2004 RTP and Resolution No. 03-3382 (the 2004 RTP/2004-07 MTIP Air Quality Conformity Determination), upon its adoption by the Council, to the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency prior to January 26, 2004, for review for acknowledgement that these documents conform with the requirements of the Clean Air Act.

ADOPTED by the Metro Council this 11<sup>th</sup> day of December 2003.

David Bragdon, Council President

Approved as to Form:

  
Daniel B. Cooper, Metro Attorney

BEFORE THE METRO COUNCIL

FOR THE PURPOSE OF DESIGNATION OF ) RESOLUTION NO. 03-3380A  
THE 2004 REGIONAL TRANSPORTATION )  
PLAN AS THE FEDERAL METROPOLITAN )  
TRANSPORTATION PLAN TO MEET ) Introduced by Councilor Park  
FEDERAL PLANNING REQUIREMENTS )

WHEREAS, federal law requires Metro to demonstrate every three years that its Regional Transportation Plan (“RTP”) conforms to the Clean Air Act; and

WHEREAS, the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency last found the RTP to conform to the requirements of the Clean Air Act on January 26, 2001; and

WHEREAS, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Boundary; and

WHEREAS, a post-adoption air quality analysis must demonstrate conformity with the federal Clean Air Act for continued federal certification; and

WHEREAS, the Metro Council has received and considered the advice of its Joint Policy Advisory Committee on Transportation and its Metro Policy Advisory Committee, and all proposed amendments identified in Exhibit “A” have been the subject of a ~~30-day~~ public review period [that began October 31, 2003, and ended December 10, 2003](#); and

WHEREAS, the Council held a public hearing on the 2004 RTP on December ~~11~~ [4](#), 2003; now therefore,

BE IT RESOLVED that the Metro Council:

1. The 2004 Regional Transportation Plan (“RTP”), ~~adopted by the Council in Ordinance No. 03-1024~~, shall be the federal Metropolitan Transportation Plan.
2. The map in Part 1 (Policy Update) of the 2004 Regional Transportation Plan Update, ~~adopted by the Council in Ordinance No. 03-1024~~, shall be the Metropolitan Planning Organization Planning Area Boundary for purposes of the federal Metropolitan Transportation Plan.

3. The Chief Operating Officer shall revise the 2004 RTP, attached and incorporated into this resolution as Exhibit A (Parts 1, 2, and 3), as recommended by the Transportation Planning Advisory Committee to the Joint Policy Advisory Committee in “Summary of Public Comments: Receive October 31, 2003 through December 4, 2003,” dated December 5, 2003, attached and incorporated into this resolution as Exhibit B, and in “Supplemental Public Comments: Received December 5, 2003 through December 10, 2003,” dated December 11, 2003, attached and incorporated into this resolution as Exhibit C.

~~34.~~ The Chief Operating Officer shall submit this resolution, ~~and~~ the 2004 RTP and Resolution No. 03-3382 (the 2004 RTP/2004-07 MTIP Air Quality Conformity Determination ~~as set forth in Part 4 (Air Quality Conformity), of Exhibit A upon its adoption by the Council,~~ to the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency prior to January 26, 2004, for review for acknowledgement that these documents conform with the requirements of the Clean Air Act ~~prior to January 26, 2004.~~

~~4. — The Findings of Compliance in Exhibit B, attached and incorporated into this resolution, explain how the 2004 RTP conforms to the requirements of the Clean Air Act and federal planning requirements.~~

ADOPTED by the Metro Council this \_\_\_\_ day of December 2003.

## 2004 Regional Transportation Plan **Policy Update**

**October 31, 2003**

**METRO**  
PEOPLE PLACES  
OPEN SPACES

METRO

## 2004 Regional Transportation Plan Policy Highlights

### Recent Policy Amendments

Since the last update to the Regional Transportation Plan (RTP) in August 2000, a number of policy amendments have been adopted. These include:

- Oregon Land Conservation and Development Commission (LCDC) acknowledgement amendments (2001)
- TriMet's Elderly and Disabled Transit Study (2001)
- Regional Corridor Priorities project (2001)
- I-5 Partnership corridor study (2002)
- Metro's Green Streets project (2002)
- South Corridor Transit Study (2003).

These amendments to policies and policy maps have already been adopted by ordinance prior to this RTP update, and incorporated into the plan document.

### Proposed Policy Map Amendments

The proposed policy amendments for the 2004 Regional Transportation Plan are limited to several transportation system map changes. No changes to policy text are proposed as part of this update.

This policy packet details a number of proposed amendments to the Regional Street Design and Regional Freight System maps that reflect the Oregon Transportation Commission's interest in creating "special transportation areas" where compact urban centers and main streets are planned along state-owned arterial streets. *These proposed map changes are shown in the table in Attachment 1.*

The updated system maps also include a number of "housekeeping" amendments that reflect fine-tuning of the various model system maps, as recommended by local cities and counties through transportation plans adopted since the last RTP update in August 2000. *These changes are also summarized in Attachment 1.*

Finally, a new map is proposed to be added to Chapter 1 of the RTP that identifies the Metropolitan Planning Organization (MPO) Planning Boundary. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes. The boundary includes the area inside Metro's jurisdictional boundary, the 2003 urban growth boundary and the 2000 census defined urbanized area boundary for the Portland metropolitan region. *This map is shown in Attachment 2 (note: a larger version of this map is available from Metro upon request).*

# 2004 Regional Transportation Plan Project Update

October 31, 2003

**METRO**  
PEOPLE PLACES  
OPEN SPACES

**METRO**

## 2004 Regional Transportation Plan Project Highlights

### Recent Project Amendments

Since the last update to the Regional Transportation Plan (RTP) in August 2000, the Metro Council adopted a number of project amendments that stem from transportation corridor studies, including:

- the I-5 Partnership corridor study (2002)
- the South Corridor Transit Study (2003).

These amendments have already been adopted by ordinance prior to this RTP update, and are included in the published RTP project lists.

### Proposed Project Amendments

The proposed project changes in the draft 2004 RTP combine the "Preferred" and "Priority" systems contained in the 2000 RTP as a single Preferred system of projects needed to serve the region over the 20-year planning period, through 2025. This proposed \$9.9 billion preferred system establishes the universe of projects eligible for inclusion in the \$4.2 billion subset of "Financially Constrained" projects that are eligible for federal funding.

The Financially Constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program (MTIP) and Metro's Transportation Priorities process. The MTIP allocates federal funds in the region, and is updated every two years, and includes a rolling, four-year program of transportation improvements. The 2003 Regional Transportation Plan will provide an updated set of financially constrained projects and programs for future MTIP funding allocations.

Metro worked with local cities and counties to develop a comprehensive inventory of regional transportation projects identified in local plans and special studies adopted since the 2000 RTP was completed. This inventory includes:

- new projects or studies that are not currently in the 2000 Regional Transportation Plan, but that have been adopted in local transportation system plans (TSPs) and regional corridor studies through a public process
- updates to existing 2000 RTP projects or studies to reflect changes in project location, description, cost and recommended timing

Nearly all city and county transportation plans in the Metro region have been updated during the past three years to be consistent with the 2000 RTP. In the process of completing these updates, many local plans identified new transportation projects of regional significance that are proposed as part of the draft 2004 RTP as amendments.

Some corridor studies that have been completed (or are nearing completion) since the last RTP update in August 2000 have been endorsed by resolution with the expectation that the new projects generated by these studies would be incorporated into the current RTP update. This includes the Powell/Foster Corridor Study, Phase 1.

Finally, the Pleasant Valley Concept Plan, Powell Boulevard Streetscape Study and the McLoughlin Boulevard Enhancement Plan were completed in 2003 with the expectation that new projects generated by these local planning efforts would be incorporated into the 2004 RTP. The recommendations endorsed in each of these efforts are also reflected in the enclosed draft amendments.

## How Projects Were Prioritized

In October, Metro staff worked with members of the Transportation Policy Alternatives Committee and other interested parties to update the RTP project lists. In a series of four half-day workshops, this effort focused on incorporating all "housekeeping" amendments generated by local plans that have been adopted since the RTP was approved in August 2000. Since Metro commented separately on all of these local plans during their respective adoption activities, friendly amendments that were consistent with RTP policies, had already been identified for most projects.

The principal focus of the TPAC workshops was to define an updated Financially Constrained system of improvements. This exercise is a federal requirement, and defines a subset of roughly half of the Preferred system projects that are demonstrated to conform to the federal Clean Air Act, and subsequently eligible for federal funds. The purpose of the exercise is to demonstrate that those projects most likely to be funded over the 20-year planning period will not result in a lapse in conforming to federal Clean Air Act standards for auto emissions.

Some notable differences in the 2004 RTP constraint exercise include a somewhat larger revenue projection for the constrained system through the new plan horizon year of 2025. Coupled with the fact that projects from the current plan have been built since it was adopted, this revenue increase results in a net gain in projects than can be included under the constraint ceiling. The expanded constrained revenue is largely the result of modest increases in local revenue sources devoted to regional transportation improvements, or revenues that reduce the backlog of maintenance obligations, which in turn expands the budget for capital projects.

There has also been an extensive discussion of factoring future Oregon Transportation Investment Act (OTIA) revenue into the forecast, but due to the limited timeframe for completing the RTP update, this assumption was not possible. Future OTIA revenues are expected to be incorporated into future state forecasts, and will be reflected in the next update to the RTP. However, the first three OTIAs are included in the forecast, and are part of the increased state revenue stream shown in the 2004 forecast amount.

The TPAC exercise followed the basic principles of (a) maintaining the Region 2040 Plan policy emphasis of the current RTP by focusing improvements in areas that serve as the economic engines for the region, including centers, ports and industrial areas, and (b)

maintaining a similar project balance among travel modes, including roads, transit, bikeways, pedestrian improvements and other project categories. Figure 1 is a summary of how the proposed 2004 RTP projects compare with the existing 2000 RTP according to these principles:

Figure 1  
Distribution of Financially Constrained System Projects

2040 Policy Emphasis (by number of projects)	2000 RTP	Draft 2004 RTP
Projects in Central City & Regional Centers	40%	60%
Projects in Industrial Areas and Ports	35%	17%
Projects in Town Centers & Main Streets	15%	17%
Projects in Other Areas	10%	7%

Balancing Modes of Transportation (by dollars)	2000 RTP	Draft 2004 RTP
Road & Bridge Projects	35%	46%
Bicycle & Pedestrian Projects	7%	9%
Transit Projects	55%	41%
Boulevard Projects	3%	4%

The shift in projects from industrial areas and ports to the central city and regional centers is partly due to a number of changes to the proposed transit improvements in the constrained system. While number of major transit projects have been completed since the 2000 RTP was adopted, such as the Central City Streetcar, Interstate MAX and Airport MAX projects, the major rail improvements planned for the south corridor to Clackamas and extensions of the Central City Streetcar will increase the emphasis of major transit service on serving regional centers and the central city.

Though the share of dollars devoted to transit projects appears to decline, the actual amount is similar to the 2000 RTP, and the change is instead due to growth in the road revenues. As the lower part of Figure 1 shows, road revenues are expected to increase beyond the 2000 projections at both the local and state level, boosting the share of road and bridge projects, relative to transit projects. These most expensive road improvements are concentrated in major corridors and centers that are traditional hubs of the transportation system, thus adding to the increase in share of projects serving the central city and regional centers.

The slight increase in bicycle, pedestrian and boulevard projects shown in Figure 1 reflect a continued emphasis on many specific projects carried over from the 2000 RTP system, as well as new revenues for such projects proposed by ODOT and several local jurisdictions. While the percentage devoted to these projects is comparatively low, the cost of bicycle and pedestrian projects, in particular, tend to be modest since they can often be constructed without purchasing right-of-way.

Table 1 of this packet provides a more detailed summary of the proposed project changes to the RTP Financially Constrained System, as developed by Metro and TPAC members. Table 2 is a comprehensive list of RTP projects that includes all Financially Constrained and Preferred system improvements.

## Timing of the RTP Update

This RTP update comes at a critical turning point on a number of technical fronts. First, the current plan is due to lapse in late January 2004 under federal planning regulations, and must be updated in order to ensure the continued flow of federal funds for RTP projects. Second, the air quality analysis tool used in the region will soon be replaced with a new "Mobile 6" model that still requires testing to determine whether the current mix of RTP projects could conform to the Clean Air Act.

Compounding the transition to a new air quality tool is the fact that the Oregon Department of Environmental Quality (DEQ) is embarking on an update to their Air Quality Maintenance Plan, a governing document for RTP air quality assessments. This effort is expected to take as much as two years, counting federal approval of the updated air quality plan. During this period, it could be difficult to add or change projects in the RTP, which underscores the importance of including critical projects in this RTP update, and completing the update well in advance of the January 2004 lapse date.

**Table 1**  
**Summary of 2004 RTP Financially Constrained System**  
**Project List Changes**  
October 31, 2003

RTP #	Projects Added	Projects Dropped	Summary of Change	Est. Project Cost in 2003 dollars
1000		Interstate MAX LRT	Deleted (under construction)	
1002		Vancouver Light Rail Loop	Moved to Preferred System pending approval of LRT strategy in Clark County, Wa.	Washington State Project
1008	I-5 South Corridor Study			\$ 1,732,500
1010	Morrison Bridge Deck Replacement			\$ 10,000,000
1012	Sellwood Bridge Replacement			\$ 90,000,000
1014		Central City Street Car	Deleted (Construction completed)	
1015	Central City Street Car - Phase 2a			\$ 15,350,000
1016		Central City Street Car	Deleted (under construction)	
1021		Peninsula Crossing Trail	Deleted (constructed)	
1024	I-5/McLoughlin Ramps			\$ 23,100,000
1025	I-5/North Macadam Access Improvements			\$ 20,000,000
1027	South Portland Improvements			\$ 28,293,000
1030	Ross Island Bridge Interchange			\$ 5,082,000
1033		Lovejoy Ramp Removal	Deleted (Construction completed)	
1034		Lower Albina RR Crossing	Deleted (Construction completed)	
1039	SE Belmont Ramp			\$ 1,732,500
1056		Lloyd District TMA Startup	Deleted (project completed)	
1057	Eastbank-Springwater Trail Connector (Three Bridges) Improvement			\$ 4,700,000
1058		SW Moody Bikeway	Deleted (Construction completed)	
1063		SE Morrison / Belmont Bikeway	Deleted (local level improvement)	
1064		N Interstate Bikeway	Deleted (under construction)	
1065		SE 17th Avenue Bikeway	Deleted (included in project 1066)	
1066		SE Milwaukie Bikeway	Deleted (local level improvement)	
1069		East Burnside Bikeway	Deleted (local level improvement)	
1079		Steel Bridge Pedestrian Way (RATS Phase I)	Deleted (Construction completed)	
1081		Eastbank Esplanade	Deleted (Construction completed)	
1082	SE Grand Avenue Bridgehead Improvements			\$ 1,600,000
1086	Central City Street Car - Phase 2b			\$ 20,000,000
1087	Central City Street Car - Phase 2c			\$ 12,000,000
1089	East Burnside/NE Couch Couplet and Street Improvements			\$ 7,500,000
1090	W Burnside/NW Couch Couplet and Street Improvements			\$ 7,500,000
1097	Naito Parkway Street and Pedestrian Improvements			\$ 3,250,000
1098	Aerial Tram			\$ 15,000,000
1106	Eastside Streetcar - Phase 1			\$ 36,900,000
1107	Eastside Streetcar - Phase 2			\$ 44,000,000
1118	Sandy Boulevard Frequent Bus			\$ 1,760,000

# How to Comment on the update to the 2004 Regional Transportation Plan

The public comment period for the 2004 Regional Transportation Plan (RTP) begins on October 31, 2003 and concludes with a public hearing on December 4, 2003. You may submit comments online at Metro's website:

[www.metro-region.org/rtp](http://www.metro-region.org/rtp)

Comments and questions may also be mailed using the form below, or left on Metro's Transportation hotline at (503) 797-1900, Option 2.

# Regional Transportation Plan Update Calendar

October 31	Public comment period begins; staff recommendation on draft 2004 RTP released for 30-day public comment period; draft RTP and conformity determination submitted to FHWA and FTA to begin review
November 3	Air quality conformity analysis begins
November 5	MTAC comments on draft 2004 RTP
November 12	MPAC comments on draft 2004 RTP
November 13	JPACT tentative action on draft 2004 RTP
November 13	Metro Council first reading of Ordinance on draft 2004 RTP
November 26	TPAC review and discussion of draft 2004 RTP and air quality conformity analysis
December 4	Public hearing on draft 2004 RTP; public comment period ends at 5 p.m.
December 5	TPAC special meeting to comment on draft 2004 RTP
December 10	Tentative final MPAC action on 2004 RTP
December 11	Tentative final JPACT action on 2004 RTP
December 11	Metro Council second reading of Ordinance and consideration of adoption of 2004 Regional Transportation Plan

## 2004 Regional Transportation Plan Technical Update Highlights

### Recent Technical Amendments

Since the last update to the Regional Transportation Plan (RTP) in August 2000, the Metro Council adopted a number of technical amendments that were mandated by the Oregon Land Conservation and Development Commission (LCDC) as part of the RTP acknowledgement process. These amendments were adopted in 2002, and are reflected in the published version of the RTP.

### Proposed Technical Amendments

Since the last RTP update, a number of corridor studies and concept plans for new urban areas have been completed, and approved by local or regional officials, or are about to be completed. The results of these studies include a number of technical changes to the RTP implementation chapter that frame future work that must still be completed, and delete technical requirements that have been addressed by these studies. The changes reflected in the proposed technical amendments include:

- Powell-Foster Corridor Study – Phase I Recommendations
- I-5 South – Wilsonville Area Study
- Regional Travel Option Strategic Planning
- RTP Modal Target Study
- Damascus/Boring Concept Plan
- Transportation Adequacy Policy – Transportation Planning Rule Requirements
- National Highway System (NHS) Routes Update

The proposed amendments are detailed in the attached strikethrough/underscore version of Chapter 6 of the 2000 Regional Transportation Plan. A number of other minor “housekeeping” edits are also shown in the proposed amendments to this chapter.

## CHAPTER 6

# Implementation

### 6.0 Introduction

The policies and transportation strategy in this plan reflect federal, state and regional planning requirements, while balancing the need for transportation improvements with increasingly limited funding. As such, the plan serves as a 20-year blueprint for transportation improvements in the region. However, there is much work to be done. Implementing this plan will require a cooperative effort by all jurisdictions responsible for transportation planning in the region, and will involve the following:

- adoption of regional policies and transportation strategies in local plans
- a concerted regional effort to secure needed funding to build planned transportation facilities and maintain and operate an expanded transportation system
- construction of the transportation improvements needed to serve expected growth and address existing safety concerns
- focusing strategic improvements that leverage key 2040 Growth Concept components
- periodic updates of the plan to respond to development trends and the associated changes in travel demand
- incorporating transportation solutions from corridor-level or subarea refinement plans
- ongoing monitoring for consistency with the local TSP development and other implementing agency plans, including the Oregon Department of Transportation's Six-Year Program and Tri-Met's Transit Development Plan

The transportation strategy described in Chapter 5 of the plan will not meet all of the region's 20-year transportation needs, but it is a significant first step towards achieving the preferred system. Instead, it represents a pragmatic balance between the need to maintain existing infrastructure and keep pace with expected growth in the region and the realities of limited transportation funding. As the region moves forward with implementation of this plan, a new paradigm for how we view the transportation system must evolve. Like other urban utilities, transportation infrastructure must increasingly be viewed as a scarce commodity that should be managed and allocated to reflect the growing cost and complexity of expanding the system.

This chapter describes the steps necessary to implement the plan, including:

- compliance with federal, state and regional planning requirements
- implementation of the plan through local TSPs

- relationship to the Metropolitan Transportation Improvement Plan
- process for updating and amending the plan
- process for completing refinement plans, and locations where refinement plans must be completed
- outstanding issues that cannot be addressed at this time, but must be considered in future updates to the plan

Following this chapter are other important resources for implementing the plan, including appendices that describe proposed transportation projects and strategies in more detail, and a separate background document that describes much of the methodology used to develop this plan.

## **6.1 Demonstration of Compliance with Federal Requirements**

### **6.1.1 Metropolitan Planning Required by TEA-21**

The metropolitan planning process outlined by Congress in the federal Transportation Equity Act for the 21st Century (TEA-21) establishes a cooperative, continuous and comprehensive framework for making transportation investment decisions in metropolitan areas throughout the United States. Program oversight is a joint FHWA/FTA responsibility. The federal planning requirements were originally promulgated as part of the 1992 federal Intermodal Surface Transportation Efficiency Act (ISTEA), and were substantially reaffirmed by TEA-21 in 1998.

Among the most significant continuing provisions of TEA-21 for the Metro region are the following planning requirements:

- Metro, in cooperation with the ODOT, Tri-Met and other transit operators, remain responsible for determining the best mix of transportation investments to meet metropolitan transportation needs.
- Metro is responsible for adopting the Regional Transportation Plan.
- Metro is responsible for adopting the MTIP. ODOT must include the MTIP without change in the STIP. The Governor is designated to resolve any disagreements between Metro's MTIP and ODOT's STIP.
- The RTP must provide a 20-year planning perspective, addressing air quality consistency, fiscal constraint and public involvement requirements established under the original ISTEA.
- The Oregon Department of Environmental Quality must adopt an Oregon State Implementation Plan (SIP). The SIP includes actions that must be adopted by Metro and results in an emissions budget for carbon monoxide and ozone. Metro must demonstrate

progress toward implementing the actions identified in the SIP and demonstrate conformity with the carbon monoxide and ozone emissions budget.

- A Congestion Management System (CMS) is required in larger metropolitan areas that are designated as air quality maintenance or non-attainment areas. The Portland metropolitan region was designated as a maintenance area in 1997. Highway projects that increase single-occupant vehicle capacity must be consistent with the CMS.
- The CMS continues the requirement that alternatives to motor vehicle capacity increases be evaluated prior to adding single-occupant vehicle projects.
- Federal Highway Administration and Federal Transit Administration certification of the planning process is required in larger metropolitan areas, including the Metro region.

TEA-21 consolidated the 16 planning factors from the original ISTEA into seven broad areas to be considered in the planning process (contained in section 1203(f) of the federal act). These factors are advisory, and failure to consider any one of the factors is not reviewable in court. However, the seven factors seek to:

- Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity and efficiency
- Increase the safety and security of the transportation system for motorized and non-motorized users
- Increase the accessibility and mobility options available to people and for freight
- Protect and enhance the environment, promote energy conservation and improve quality of life
- Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight
- Promote efficient system management and operation
- Emphasize the preservation of the existing transportation system

Each of these factors has been addressed through RTP policies identified in Chapter 1 of this plan and selection of the proposed transportation projects and programs identified in Chapter 3 of this plan. Specific sections that address the seven federal planning factors are detailed in the RTP Background Document.

In addition to changes to the ISTEA planning factors and scope of regional transportation planning, TEA-21 also modified several other elements of the federal ISTEA. Under the revised provisions, the Regional Transportation Plan must:

- Include operation and management of the transportation system in the general objectives of the planning process
- Address transportation planning area boundary relationship to non-attainment area boundaries; boundaries established on date of enactment remain as is, but future expansions of non-attainment area boundaries do not force expansion of transportation planning area unless agreed to by the Governor and Metro
- Coordinate with neighboring MPOs where a project crosses planning area boundaries
- Specifically identify freight shippers and users of public transit on the list of stakeholders to be given opportunity to comment on plans and TIPs
- Cooperate with ODOT and transit agencies in the development of financial estimates that support plan and TIP development
- Identify projects that will be implemented within a forecast of revenues that can be reasonably expected to be available over the life of the Regional Transportation Plan. The Regional Transportation Plan may also include additional projects that may be identified for illustrative purposes, and would be included in plans and TIPs if additional resources were available. Additional action by ODOT, Metro and the Secretary of Transportation is required to advance such projects

The RTP meets the TEA-21 provisions through its policies and project selection criteria. A summary of RTP compliance with these provisions is included in the RTP Background Document.

#### 6.1.2 Air Quality Conformity: Criteria that Constitutes a Conformed Plan

The ~~2020~~2025 Preferred ~~and Priority~~-Systems ~~both~~ requires new revenue sources and go beyond federal requirements that long-range transportation plans be based upon "constrained resources." Air quality conformity of this plan will be based on a scaled-down ~~2020~~2025 ~~Priority~~-Preferred System that can likely be implemented within the federally defined fiscally constrained level of reasonably available resources. This system will be termed the ~~2020~~2025 ~~Fiscally~~-Financially Constrained System. Air quality conformity entails:

- Making reasonable progress on Transportation Control Measures as identified in the SIP
- Staying within the carbon monoxide and ozone emissions budgets set for transportation with the SIP based upon a fiscally constrained transportation network

Portland is currently designated a maintenance area for the National Ambient Air Quality Standards (NAAQS) for ozone and carbon monoxide under the Clean Air Act Amendments of 1990.

### 6.1.3 Demonstration of Air Quality Conformity

~~The Financially Constrained System and the 2020 Priority System have been found to conform to federal air quality requirements. Appendix 4.0 provides detailed information to support this finding on the air quality conformity analysis to be completed on the 2025 Financially Constrained System.~~

## 6.2 Demonstration of Compliance with State Requirements

This section identifies the applicable state regulations for the regional transportation system plan and identifies the corresponding provisions contained in this RTP. Findings of Fact and Conclusions of Law explaining TPR compliance, ~~which were will be~~ adopted with the ~~2000-2004~~ RTP, ~~are found and will be included~~ in Appendix 5.0.

### 6.2.1 System Plan Required by Oregon Transportation Planning Rule

The Oregon Transportation Planning Rule (TPR) sets forth a number of requirements for Metro's Transportation System Plan (TSP). This RTP has a number of purposes. This Plan is adopted as the regional functional plan for transportation and the federal metropolitan transportation plan, as well as the regional TSP under state law. The RTP as regional TSP, must address provisions of Oregon Administrative Rule 660.012.000 applicable to regional TPSs.

The following TPR provisions are addressed in the portions of this multipurpose plan indicated under each applicable TPR requirement. Together, these portions of the ~~2000-2004~~ RTP comprise the regional TSP. Other portions of the RTP not indicated under the applicable TPR requirement address regional and federal planning issues beyond the regional TSP under this administrative rule.

- **660.012.0015(2) - MPOs shall prepare TSPs in compliance with TPR**  
*Metro is required to prepare a Transportation System Plan (TSP) for facilities of regional significance within Metro's jurisdiction. The portions of the ~~2000-2004~~ RTP which constitutes the regional transportation system plan are provisions of Chapters 1, 2, 5, 6 and the Appendix which address regional TSP issues, including the priority system of improvements.*
- **660.012.0020 - TSP adequately serves regional transportation needs**  
*The RTP fully addresses this requirement by identifying the region's 20-year transportation needs in Chapter 2, including the future motor vehicle, public transportation, bicycle, pedestrian and freight system improvements, and complementary demand management, parking and financing programs in Chapter 5 adequate to respond to these identified needs.*
- **660.012.0025 - Complying with Statewide Planning goals**  
*This is the first regional TSP adopted in the metro region. As such, the ~~2000-2004~~ RTP identifies transportation needs for regional facilities for the purpose of informing regional and local transportation and land-use planning. In some cases where a need has been established, decisions regarding function, general location and mode are deferred to a*

refinement plan or local TSP. In these cases, the findings in Chapter 5 describe how these needs are met for the purpose of RTP analysis, and Sections 6.7.5 and 6.7.6 of this chapter establish the need for refinement planning, and base assumptions for specific refinement plans that are needed to ensure consistency with the RTP.

- **660.012.0025(3) - Refinement plans allowed**

A number of refinement plans are proposed in the 2000 RTP, including 16 corridor plans and three area plans. Section 6.7 of this chapter describes the purpose and scope of refinement plans.

- **660.012.0030 - Determination of transportation needs**

The project development phase of the ~~2000-2004~~ RTP followed the congestion management requirements of Section 6.6.3 of this chapter, which incorporates the TPR requirements for determining transportation needs.

- **660.012.0035 - Transportation system evaluation required**

This ~~2000-2004~~ RTP represents a minor update to the 2000 RTP, which was is built on an extensive foundation of modeling and analysis. The Region 2040 project included five separate land use and transportation scenarios, including the alternative adopted and acknowledged in the 1995 Regional Urban Growth Goals and Objectives as the 2040 Growth Concept. A detailed transportation system was developed and modeled for each scenario, and the lessons learned from this effort were the starting point for the 2000 RTP update. Next, a level-of-service alternatives analysis was developed to further refine the region's system performance standards. Finally, the system development component of the 2000 RTP update included four separate rounds of modeling and analysis that combined the principles of the Region 2040 project and the level of service analysis.

For the purpose of complying with this requirement, the ~~Priority-Preferred~~ System in Chapter ~~5-3~~ of the ~~2000-2004~~ RTP establishes a scale of the improvements that are adequate to meet state and regional travel needs in the Metro area, including the needs of the disadvantaged, the movement of goods and the protection of farm and forest resources within rural reserves.

- **660.012.0035(4) - Reduction in vehicle miles traveled per capita**

The ~~2000-2004~~ RTP addresses this requirement through the non-SOV modal targets set forth in Table 1.3 of this plan. The modal targets are linked to the 2040 Growth Concept, and if met, would result in satisfying the required 10 percent reduction in vehicle miles traveled per capita over the 20-year plan period. The non-SOV modal targets set the context for transportation improvements proposed in this plan. The analysis in Chapter 5 establishes that the region is making substantial progress toward meeting this TPR requirement, though the modal targets would not be met in all areas, due to the relative state of urbanization at the conclusion of the planning period. Areas with the greatest concentration of mixed-use development and quality transit service will easily meet the targets, while areas that are still developing are expected to meet the targets beyond the 20-year plan period.

*These findings represent the good faith effort required to comply with this element of the TPR. An outstanding issue in Section 6.8.10 of this chapter directs future updates of the RTP to expand on alternative measures that both comply with the TPR, and improve on the plan's ability to identify appropriate transportation projects to meet identified needs.*

- **660.012.0035(6) - Measures and objectives required for non-auto travel**  
*The non-SOV modal targets in Table 1.3 of this plan provide the basic framework for compliance with this TPR provision, which requires a number of measures for demonstrating reduced reliance on the automobile. Other policies in Chapter 1 of this plan complement the non-SOV modal targets, and findings in Chapter 5-3 of this plan demonstrate a reduced reliance on the automobile based on the proposed system improvements.*
- **660.012.0040 - Transportation funding program**  
*The project descriptions in Appendix 1.1 and financial analysis in Chapter 4 of this plan satisfy the various TPR transportation funding requirements. Benchmarks in Section 6.5.3 of this chapter will address TPR requirements for implementation of the RTP through the MTIP.*
- **660.012.0050 - Transportation project development**  
*Section 6.7 of this chapter establishes the regional project development requirements for improvements included in the RTP. These and other related requirements are consistent with TPR provisions for project development.*

Metro's adoption of the ~~2000-2004~~RTP provisions that address these applicable provisions of the TPR establishes the regional TSP for the Metro region. Through the consistency review process, local TSPs will be evaluated to ensure that local strategies needed to satisfy the above regional planning requirements are implemented. However, local TSPs are not required to make specific findings on these TPR provisions for the regional system, since the RTP establishes compliance for the Metro region. Appendix 5.0 ~~will~~ includes full findings of compliance with the TPR.

### **6.2.2 Regional TSP Provisions Addressed Through Local TSPs**

The ~~2000-2004~~ RTP establishes compliance for regional TSP requirements with the policies, projects and financial analysis contained in this plan. Local consistency with the ~~2004-2000~~ RTP is described in Section 6.4.1. However, implementation of some regional TSP requirements will occur only through local implementation of RTP policies. These include adoption of the modal targets specified in Policy 19.0 of Chapter 1, and in parking management requirements contained in Title 2 of the Urban Growth Management Functional Plan. Local adoption of the Chapter 1 modal targets is necessary to demonstrate compliance with the VMT/Capita reduction findings described in Chapter 5-3 of the plan.

### **6.2.3 Special Designations in the Oregon Highway Plan (OHP)**

The Oregon Highway Plan (OHP) establishes three special district designations for certain areas along state-owned facilities. The purpose of the designations is to respond to unique community access and circulation needs, while maintaining statewide travel function. Though these special districts are generally identified jointly between ODOT and local jurisdictions, the RTP establishes

a policy framework that supports these OHP designations through the 2040 Growth Concept and corresponding regional street design classifications contained in Section 1.3.5. The following is a summary of how RTP street design designations correspond to the OHP special district classifications:

- ***Special Transportation Area (STA):*** This designation is intended to provide access to community activities, businesses and residences along state facilities in a downtown, business district or community center. In these areas, the OHP acknowledges that local access issues outweigh highway mobility, except on certain freight routes, where mobility needs are more balanced with local access.

The RTP addresses this OHP designation through the boulevard design classifications, located in the 2040 central city, regional center, town center and main street land use components. In the Metro region, state routes designated as boulevards that also meet other standards as defined in the OHP, are eligible to be designated STAs. Further, the application of the boulevard design classifications also factors in major freight corridors, and this design classification is generally not applied to such routes.

- ***Commercial Center:*** This designation applies to relatively large (400,000 square feet) commercial centers located along state facilities. In these areas, the OHP allows for consolidate access roads or driveways that serve these areas, but such access is subject to meeting OHP mobility standards on the state highway serving the center. If the center has consolidated access roads and meets other OHP standards, the OHP mobility standard may be reduced.

The RTP supports this OHP designation with the throughway design classifications, which include freeway and highway design types. The throughway designs are mobility-oriented, and generally apply to routes that form major motor vehicle connections between the central city, regional centers and intermodal facilities. The throughway design classifications support the concept of limiting future access on a number of state facilities in the region that are designated as principal routes in the RTP.

- ***Urban Business Area (UBA):*** This designation recognizes existing commercial strips or centers along state facilities with the objective of balancing access need with the need to move through-traffic.

In the Metro region, these areas are generally designated as mixed-use corridors and neighborhoods in the 2040 Growth Concept, and a corresponding regional or community street design classification in the RTP which calls for a balance between motor vehicle mobility, and local access. These designs are multi-modal in nature, and include transit, bicycle and pedestrian design features, consistent with the OHP designation. The regional and community street classification can also be found in some regional and town centers, and where these are state routes, the facility is eligible for the OHP designation of Urban Business Area.

## 6.2.4 Compliance with State Requirements

### *Compliance with Statewide Planning Goals*

Together, the RTP and city and county TSPs that implement the RTP will constitute the land use decision about need, mode, and function and general location of planned transportation facilities and improvements shown in the RTP. As the regional transportation system plan, the RTP constitutes the land use decision about need, mode and function of planned transportation facilities and improvements. The RTP also identifies the general location of planned transportation facilities and improvements.

The land use decision specifying the general location of planned regional transportation facilities and improvements will be made by cities and counties as they develop and adopt local TSPs that implement the RTP. While the specific alignment of a project may be incorporated into a TSP, such decisions are subject to the project development requirements in Section 6.7, and must include findings of consistency with applicable statewide planning goals, as described below.

In preparing and adopting local TSPs, cities and counties will prepare findings showing how specific alignment of planned regional facilities or general location or specific alignment of local facilities is consistent with provisions of the RTP, acknowledged comprehensive plans and applicable statewide planning goals, if any. If the actual alignment or configuration of a planned facility proposed by a city or county is inconsistent with the general location of a facility in the RTP, the process described in Section 6.4 to resolve such issues shall be used prior to a final land use decision by a city or county.

This section describes how cities and counties will address consistency with applicable local comprehensive plans and statewide planning goals.

### *General Location of Planned Transportation Facilities*

Maps included in the RTP illustrate the general location of planned transportation facilities and improvements. For the purposes of this plan, the general location of transportation facilities and improvements is the location shown on maps adopted as part of this plan and as described in this section. Where more than one map in the RTP shows the location of a planned facility, the most detailed map included in the plan shall be the identified general location of that facility.

Except as otherwise described in the plan, the general location of planned transportation and facilities is as follows:

For new facilities, the general location includes a corridor within 200 feet of the location depicted on the maps included within the RTP. For interchanges, the general location corresponds to the general location of the crossing roadways. The general location of connecting ramps is not specified. For existing facilities that are planned for improvement the general location includes a corridor within fifty feet of the existing right-of-way. For realignments of existing facilities the general location includes a corridor within 200 feet of the segment to be realigned, measured from the existing right-of-way or as depicted on the plan map.

Local transportation system plans and project development are consistent with the RTP if a planned facility or improvement is sited within the general location shown on the RTP maps and described

above in this section. Cities and counties may refine or revise the general location of planned facilities as they prepare local transportation system plans to implement the RTP. Such revisions may be appropriate to lessen project impacts, or to comply with applicable requirements in local plans or statewide planning goals. A decision to authorize a planned facility or improvement outside of the general location shown and described in the RTP requires an amendment to the RTP to revise the proposed general location of the improvement.

*Transportation Facilities and Improvements authorized by existing acknowledged comprehensive plans*

New decisions are required to authorize transportation facilities and improvements included in the RTP that are not authorized by the relevant jurisdiction's acknowledged comprehensive plan on August 10, 2000. Many of the facilities and improvements included in the RTP are currently authorized by the existing, acknowledged comprehensive plans. Additional findings demonstrating consistency with an acknowledged plan or the statewide planning goals are required only if the facility or improvement is not currently allowed by the jurisdiction's existing acknowledged comprehensive plan. Additional findings would be required if a local government changes the function, mode or general location of a facility from what is currently provided for in the acknowledged comprehensive plan.

*Applicability of Statewide Planning Goals to decisions about General Location*

Several statewide planning goals include "site specific" requirements that can affect decisions about the general location of planned transportation facilities. These include:

- Goal 5      Open Spaces, Scenic, Historic and Natural Resources
- Goal 7      Natural Hazards and Disasters
- Goal 9      Economic Development, as it relates to protection of sites for specific uses (i.e. such as sites for large industrial uses)
- Goal 10     Housing, as it relates to maintaining a sufficient inventory of buildable lands to meet specific housing needs (such as the need for multi-family housing)
- Goal 15     Willamette River Greenway

Generally, compliance with the goals is achieved by demonstrating compliance with an acknowledged comprehensive plan. If City and county plans have been acknowledged to comply with the Goals and related rules, a planned improvement consistent with that plan is presumed to comply with the related goal requirement. Cities and counties may adopt the general location for needed transportation improvements, and defer findings of consistency with statewide planning goals to the project development phase. However, specific alignment decisions included in a local TSP must also include findings of consistency with applicable statewide planning goals.

In some situations, the Statewide Planning Goals and related rules may apply in addition to the acknowledged plan. This would occur, for example, if the jurisdiction is in periodic review, or an adopted statewide rule requirement otherwise requires direct application of the goal. Cities and

counties will assess whether there are applicable goal requirements, and adopt findings to comply with applicable goals, as they prepare local transportation system plans to implement the regional transportation plan.

If in preparing a local TSP, a city or county determines that the identified general location of a transportation facility or improvement is inconsistent with an applicable provision of its comprehensive plan or an applicable statewide planning goal requirement, it shall:

- propose a revision to the general location of the planned facility or improvement to accomplish compliance with the applicable plan or goal requirement. If the revised general location is outside the general location specified in the RTP, this would require an amendment to the RTP; or
- propose a revision to the comprehensive plan to authorize the planned improvement within the general location specified in the RTP. This may require additional goal findings, for example, if a goal-protected site is affected.

#### *Effect of an Approved Local TSP on Subsequent Land Use Decisions*

Once a local TSP is adopted and determined to comply with the RTP and applicable local plans and statewide planning goals, the actual alignment of the planned transportation facility or improvement is determined through the project development process. Subsequent actions to provide or construct a facility or improvement that are consistent with the local TSP may rely upon and need not reconsider the general location of the planned facility.

Additional land use approvals may be needed to authorize construction of a planned transportation improvement within the general location specified in an adopted local transportation system plan. This would occur if the local comprehensive plan and land use regulations require some additional review to authorize the improvement, such as a conditional use permits. Generally, the scope of review of such approvals should be limited to address siting, design or alignment of the planned improvement within the general location specified in the local TSP.

### **6.3 Demonstration of Compliance with Regional Requirements**

In November 1992, the voters approved Metro's Charter. The Charter established regional planning as Metro's primary mission and required the agency to adopt a Regional Framework Plan (RFP). The plan was subsequently adopted in 1997, and now serves as the document that merges all of Metro's adopted land-use planning policies and requirements. Chapter 2 of the Regional Framework Plan describes the different 2040 Growth Concept land-use components, called "2040 Design Types," and their associated transportation policies. The Regional Framework Plan directs Metro to implement these 2040 Design Types through the RTP and Metropolitan Transportation Improvement Program (MTIP). These requirements are addressed as follows:

- Chapter 1 of the updated RTP has been revised to be completely consistent with applicable framework plan policies, and the policies contained in Chapter 1 of this plan incorporate all of the policies and system maps included in Chapter 2 of the framework plan. These policies served as a starting point for evaluating all of the system improvements proposed in this plan, and the findings in Chapter 3 and 5 of the

RTP demonstrate how the blend of proposed transportation projects and programs is consistent with the Regional Framework Plan and 2040 Growth Concept.

- The MTIP process has also been amended for consistency with the Regional Framework Plan. During the Priorities 2000 MTIP allocation process, project selection criteria were based on 2040 Growth Concept principles, and funding categories and criteria were revised to ensure that improvements critical to implementing the 2040 Growth Concept were adequately funded.

| Prior to completion of ~~this updated~~the 2000 RTP, several transportation planning requirements were included in the *Urban Growth Management Functional Plan* (UGMFP), which was enacted to address rapid growth issues in the region while the Regional Framework Plan and other long-range plans were under development. ~~This~~The 2000 RTP ~~now replaces replaced~~ and expanded~~s~~ the performance standards required for all city and county comprehensive plans in the region contained in Title 6 of the UGMFP. See Sections 6.4.4 through 6.4.7, 6.6, 6.6.3 and 6.7.3. In addition, parking policies contained in this plan were developed to complement Title 2 of the UGMFP, which regulates off-street parking in the region. See Section 1.3.6, Policy 19.1. Therefore, this RTP serves as a discrete functional plan that is both consistent with, and fully complementary of the UGMFP.

| To ensure consistency between the ~~2000-2004~~RTP and local transportation system plans (TSPs), Metro shall develop a process for tracking local TSP project and functional classification refinements that are consistent with the RTP, and require a future amendment to be incorporated into the RTP. Such changes should be categorized according to degrees of significance and impact, with major changes subject to policy-level review and minor changes tracked administratively. This process should build on the established process of formal comment on local plan amendments relevant to the RTP.

## 6.4 Local Implementation of the RTP

### 6.4.1 Local Consistency with the RTP

The comprehensive plans adopted by the cities and counties within the Metro region are the mechanisms by which local jurisdictions plan for transportation facilities. These local plans identify future development patterns that must be served by the transportation system. Local comprehensive plans also define the shape of the future transportation system and identify needed investments. All local plans must demonstrate consistency with the RTP as part of their normal process of completing their plan or during the next periodic review. Metro will continue to work in partnership with local jurisdictions to ensure plan consistency.

| The ~~2000-2004~~RTP is Metro's regional functional plan for transportation. Functional plans by state law include "recommendations" and "requirements." The listed RTP elements below are all functional plan requirements. Where "consistency" is required with RTP elements, those elements must be included in local plans in a manner that substantially complies with that RTP element. Where "compliance" is required with RTP elements, the requirements in those elements must be included in local plans as they appear in the RTP.

For inconsistencies, cities and counties, special districts or Metro may initiate the dispute resolution process detailed in this chapter prior to action by Metro to require an amendment to a local comprehensive plan, transit service plan or other facilities plan. Specific elements in the 2000 RTP that require city, county and special district compliance or consistency are as follows:

- Chapter 1 *Consistency with policies, objectives, motor vehicle level-of-service measure and modal targets, system maps and functional classifications including the following elements of Section 1.3:*
- *regional transportation policies 1 through 20 and objectives under those policies*
  - *all system maps (Figures 1.1 through 1.19, including the street design, motor vehicle, public transportation, bicycle, pedestrian and freight systems)*
  - *motor vehicle performance measures (Table 1.2), or alternative performance measures as provided for in Section 6.4.7(1)*
  - *regional non-SOV modal targets (Table 1.3)*
- Chapter 2 *Consistency with the ~~2020~~2025 population and employment forecast contained in Section 2.1 and 2.3, or alternative forecast as provided for in Section 6.4.9 of this chapter, but only for the purpose of TSP development and analysis.*
- Chapter 6 *Compliance with the following elements of the RTP implementation strategy:*
- *Local implementation requirements contained in Section 6.4*
  - *Project development and refinement planning requirements and guidelines contained in Section 6.7*

For the purpose of local planning, all remaining provisions in the RTP are recommendations unless clearly designated in this section as a requirement of local government comprehensive plans. All local comprehensive plans and future amendments to local plans are required by state law to be consistent with the adopted RTP. For the purpose of transit service planning, or improvements to regional transportation facilities by any special district, all of the provisions in the RTP are recommendations unless clearly designated as a requirement. Transit system plans are required by federal law to be consistent with adopted RTP policies and guidelines. Special district facility plans that affect regional facilities, such as port or passenger rail improvements, are also required to be consistent with the RTP.

The state Transportation Planning Rule (TPR) requires most cities and counties in the Metro region to adopt local Transportation System Plans (TSPs) in their comprehensive plans. These local TSPs are required by the TPR to be consistent with the RTP policies, projects and performance measures identified in this section.

#### **6.4.2 Local TSP Development**

Local TSPs must identify transportation needs for a 20-year planning period, including needs for regional travel within the local jurisdiction, as identified in the RTP. Needs are generally identified either through a periodic review of a local TSP or a specific comprehensive plan amendment. Local TSPs that include planning for potential urban areas located outside the urban growth boundary shall also include project staging that links the development of urban infrastructure in these areas to future expansion of the urban growth boundary. In these areas, local plans shall also prohibit the construction of urban transportation improvements until the urban growth boundary has been expanded and urban land use designations have been adopted in local comprehensive plans.

Once a transportation need has been established, an appropriate transportation strategy or solution is identified through a two-phased process. The first phase is system-level planning, where a number of transportation alternatives are considered over a large geographic area such as a corridor or local planning area, or through a local or regional Transportation System Plan (TSP). The purpose of the system-level planning step is to:

- consider alternative modes, corridors, and strategies to address identified needs
- determine a recommended set of transportation projects, actions, or strategies and the appropriate modes and corridors to address identified needs in the system-level study area

The second phase is project-level planning (also referred to as project development), and is described separately in this chapter in Section 6.7.

Local TSP development is multi-modal in nature, resulting in blended transportation strategies that combine the best transportation improvements that address a need, and are consistent with overall local comprehensive plan objectives.

#### **6.4.3 Process for Metro Review of Local Plan Amendments, Facility and Service Plans**

Metro will review local plans and plan amendments, and facility plans that affect regional facilities for consistency with the RTP. Prior to adoption by ordinance, local TSPs shall be reviewed for consistency with these elements of the RTP. Metro will submit formal comment as part off the adoption process for local TSPs to identify areas where inconsistencies with the RTP exist, and suggest remedies.

Upon adoption of a local TSP, Metro will complete a final consistency review, and a finding of consistency with applicable elements of the RTP will be forwarded to the state Department of Land Conservation and Development (DLCD) for consideration as part of state review of local plan amendments or local periodic review. A finding of non-compliance for local TSPs that are found to be inconsistent with the RTP will be forwarded to DLCD if conflicting elements in local plans or the RTP cannot be resolved between Metro and the local jurisdiction.

The following procedures are required for local plan amendments:

1. When a local jurisdiction or special district is considering plan amendments or facility plans which are subject to RTP local plan compliance requirements, the jurisdiction shall forward the proposed amendments or plans to Metro prior to public hearings on the amendment.
2. Within four weeks of receipt of notice, the Transportation Director shall notify the local jurisdiction through formal written comment whether the proposed amendment is consistent with RTP requirements, and what, if any, modifications would be required to achieve consistency. The Director's finding may be appealed by both the local jurisdiction or the owner of an affected facility, first to JPACT and then to the Metro Council.
3. A jurisdiction shall notify Metro of its final action on a proposed plan amendment.
4. Following adoption of a local plan, Metro shall forward a finding of consistency to DLCD, or identify inconsistencies that were not remedied as part of the local adoption process.

#### **6.4.4 Transportation Systems Analysis Required for Local Plan Amendments**

This section applies to city and county comprehensive plan amendments or to any local studies that would recommend or require an amendment to the Regional Transportation Plan to add significant single occupancy vehicle (SOV) capacity to the regional motor vehicle system, as defined by Figure 1.12. This section does not apply to projects in local TSPs that are included in the ~~2000-2004~~ RTP. For the purpose of this section, significant SOV capacity is defined as any increase in general vehicle capacity designed to serve 700 or more additional vehicle trips in one direction in one hour over a length of more than one mile. This section does not apply to plans that incorporate the policies and projects contained in the RTP.

Consistent with Federal Congestion Management System requirements (23 CFR Part 500) and TPR system planning requirements (660-12), the following actions shall be considered when local transportation system plans (TSPs), multi-modal corridor and sub-area studies, mode specific plans or special studies (including land-use actions) are developed:

1. Transportation demand strategies that further refine or implement a regional strategy identified in the RTP
2. Transportation system management strategies, including intelligent Transportation Systems (ITS), that refine or implement a regional strategy identified in the RTP
3. Sub-area or local transit, bicycle and pedestrian system improvements to improve mode split
4. The effect of a comprehensive plan change on mode split targets and actions to ensure the overall mode split target for the local TSP is being achieved

5. Improvements to parallel arterials, collectors, or local streets, consistent with connectivity standards contained in Section 6.4.5, as appropriate, to address the transportation need and to keep through trips on arterial streets and provide local trips with alternative routes
6. Traffic calming techniques or changes to the motor vehicle functional classification, to maintain appropriate motor vehicle functional classification
7. If upon a demonstration that the above considerations do not adequately and cost-effectively address the problem, a significant capacity improvement may be included in the comprehensive plan

Upon a demonstration that the above considerations do not adequately and cost-effectively address the problem and where accessibility is significantly hindered, Metro and the affected city or county shall consider:

1. Amendments to the boundaries of a 2040 Growth Concept design type
2. Amendments or exceptions to land-use functional plan requirements
3. Amendments to the 2040 Growth Concept
4. Designation of an Area of Special Concern, consistent with Section 6.7.7.

Demonstration of compliance will be included in the required congestion management system compliance report submitted to Metro by cities and counties as part of system-level planning and through findings consistent with the TPR in the case of amendments to applicable plans.

#### **6.4.5 Design Standards for Street Connectivity**

The design of local street systems, including “local” and “collector” functional classifications, is generally beyond the scope of the 2000 RTP. However, the aggregate effect of local street design impacts the effectiveness of the regional system when local travel is restricted by a lack of connecting routes, and local trips are forced onto the regional network. Therefore, streets should be designed to keep through trips on arterial streets and provide local trips with alternative routes. The following mapping requirements and design standards are intended to improve local circulation in a manner that protects the integrity of the regional transportation system.

Cities and counties within the Metro region are required to amend their comprehensive plans, implementing ordinances and administrative codes, if necessary, to comply with or exceed the following mapping requirements and design standards:

1. Cities and counties must identify all contiguous areas of vacant and redevelopable parcels of five or more acres planned or zoned for residential or mixed-use development and prepare a conceptual new streets plan map. The map shall be adopted as a part of the Transportation System Plan element of the local Comprehensive Plan. The purpose of this map is to provide guidance to land-owners and developers on desired street connections that will improve local access and preserve the integrity of the regional street system.

The conceptual street plan map should identify street connections to adjacent areas in a manner that promotes a logical, direct and connected street system. Specifically, the map should conceptually demonstrate opportunities to extend and connect to existing streets, provide direct public right-of-way routes, and limit the potential of cul-de-sac and other closed-end street designs.

2. In addition to preparing the above conceptual street plan map, cities and counties shall require new residential or mixed-use development involving construction of new street(s) to provide a site plan that reflects the following:
  - a. Street connections:
    - Responds to and expands on the conceptual street plan map as described in Section 6.4.5(1) for areas where a map has been completed.
    - Provides full street connections with spacing of no more than 530 feet between connections except where prevented by barriers such as topography, railroads, freeways, pre-existing development, or where lease provisions, easements, covenants or other restrictions existing prior to May 1, 1995 which preclude street connections.
    - Where streets must cross water features identified in Title 3 of the Urban Growth Management Functional Plan (UGMFP), provide crossings at an average spacing of 800 to 1,200 feet, unless habitat quality or length of crossing prevents a full street connection.
  - b. Accessways:
    - When full street connections are not possible provides bike and pedestrian accessways on public easements or rights-of-way in lieu of streets. Spacing of accessways between full street connections shall be no more than 330 feet except where prevented by barriers such as topography, railroads, freeways, pre-existing development, or where lease provisions, easements, covenants or other restrictions existing prior to May 1, 1995 which preclude accessway connections.
    - Bike and pedestrian accessways that cross water features identified in Title 3 of the UGMFP should have an average spacing no more than 530 feet, unless habitat quality or length of crossing prevents a connection.
  - c. Centers, main streets and station communities:
    - Where full street connections over water features identified in Title 3 of the UGMFP cannot be constructed in centers, main streets and station communities (including direct connections from adjacent neighborhoods), or spacing of full street crossings exceeds 1,200 feet, provide bicycle and pedestrian crossings at an average

spacing of 530 feet, unless exceptional habitat quality or length of crossing prevents a connection.

d. Other considerations:

- Limits the use of cul-de-sac designs and other closed-end street systems to situations where barriers prevent full street extensions.
- Includes no closed-end street longer than 200 feet or with more than 25 dwelling units.
- Includes street cross-sections demonstrating dimensions of right-of-way improvements, with streets designed for posted or expected speed limits.

For replacement or new construction of local street crossings on streams identified in Title 3 of the Urban Growth Management Functional Plan, Cities and Counties, TriMet, ODOT and the Port of Portland shall amend design codes, standards and plans to allow consideration of the stream crossing design guidelines contained in the Green Streets handbook.

Figure 6.1 demonstrates a site plan map that a developer would provide to meet code regulations for the subdivision of a single parcel. Figure 6.2 shows a street cross-section that could be submitted by a developer for approval during the permitting process.

*Figure 6.1*  
**Site Plan Map**

Figure 6.2  
Street Cross Section – Local Street, mid-block

Source: Metro

3. Street design code language and guidelines must allow for:
  - a. Consideration of narrow street design alternatives. For local streets, no more than 46 feet of total right-of-way, including pavement widths of no more than 28 feet, curb-face to curb-face, sidewalk widths of at least 5 feet and landscaped pedestrian buffer strips that include street trees. Special traffic calming designs that use a narrow right-of-way, such as woonerfs and chicanes, may also be considered as narrow street designs.
  - b. Short and direct public right-of-way routes to connect residential uses with nearby commercial services, schools, parks and other neighborhood facilities.
  - c. Consideration of opportunities to incrementally extend streets from nearby areas.
  - d. Consideration of traffic calming devices to discourage traffic infiltration and excessive speeds on local streets.
4. For redevelopment of existing land-uses that require construction of new streets, cities and counties shall develop local approaches to encourage adequate street connectivity.

#### 6.4.6 Alternative Mode Analysis

Improvement in non-SOV mode share will be used as the key regional measure for assessing transportation system improvements in the central city, regional centers, town centers and station communities. For other 2040 Growth Concept design types, non-SOV mode share will be used as an important factor in assessing transportation system improvements. These modal targets will also be used to demonstrate compliance with per capita travel reductions required by the state TPR. This section requires that cities and counties establish non-SOV regional modal targets for all 2040 design types that will be used to guide transportation system improvements, in accordance with Table 1.3 in Chapter 1 of this plan:

1. Each jurisdiction shall establish an alternative mode share target (defined as non-single occupancy vehicle person-trips as a percentage of all person-trips for all modes of transportation) in local TSPs for trips into, out of and within all 2040 Growth Concept land-use design types within its boundaries. The alternative mode share target shall be no less than the regional modal targets for these 2040 Growth Concept land-use design types to be established in Table 1.3 in Chapter 1 of this plan.
2. Cities and counties, working with Tri-Met and other regional agencies, shall identify actions in local TSPs that will result in progress toward achieving the non-SOV modal targets. These actions should initially be based on RTP modeling assumptions, analysis and conclusions, and include consideration of the maximum parking ratios adopted as part of Title 2, section 3.07.220 of the *Urban Growth Management Functional Plan*; regional street design considerations in Section 6.7.3, Title 6, transportation demand management strategies and transit's role in serving the area. Local benchmarks for evaluating progress toward achieving modal targets may be based on future RTP updates and analysis, if local jurisdictions are unable to generate this information as part of TSP development.
3. Metro shall evaluate local progress toward achieving the non-SOV modal targets during the 20-year plan period of a local TSP using the Appendix 1.8 "TAZ Assumptions for Parking Transit and Connectivity Factors" chart as minimum performance requirements for local actions proposed to meet the non-SOV requirements.

#### **6.4.7 Motor Vehicle Congestion Analysis**

Motor Vehicle Level-Of-Service (LOS) is a measurement of congestion as a share of designed motor vehicle capacity of a road. Policy 13.0 and Table 1.2 of this plan establish motor vehicle level-of-service policy for regional facilities. These standards shall be incorporated into local comprehensive plans and implementing ordinances to replace current methods of determining motor vehicle congestion on regional facilities. Jurisdictions may adopt alternative standards that do not exceed the minimum LOS established in Table 1.2. However, the alternative standard must not:

- result in major motor vehicle capacity improvements that have the effect of shifting unacceptable levels of congestion into neighboring jurisdictions along shared regional facilities;
- result in motor vehicle capacity improvements to the principal arterial system (as defined in Figure 1.12) that are not recommended in, or are inconsistent with, the RTP.
- increase SOV travel to a measurable degree that affects local consistency with the modal targets contained in Table 1.3.

By definition, the RTP addresses congestion of regional significance through the projects identified in Chapter 5 or refinements plans contained in this chapter of the plan. Other, more localized congestion is more appropriately addressed through the local TSP process, and includes any locations on the regional Motor Vehicle System (Figure 1.12) that are not addressed by the RTP. Localized congestion occurs where short links within the transportation system are exceeding LOS standards, though the overall system in the vicinity of the congested link is performing acceptably.

In cases where these localized areas of congestion are located on Principal Arterial routes (as defined in Figure 1.12) or the Regional Freight System (Figure 1.17), they shall be evaluated as part of the local TSP process to determine whether an unmet transportation need exists that has not been addressed in the RTP. Should a local jurisdiction determine that an unmet need exists on such a facility, the jurisdiction shall identify the need in the local TSP, and propose one of the following actions to incorporate the need and recommended solution into the RTP:

- Identify the unmet need and proposed projects at the time of Metro review of local TSPs for consistency, but incorporate the project into the regional TSP during the next scheduled RTP update; or
- Propose an amendment to the RTP for unmet needs and resulting projects where a more immediate update of the regional TSP is appropriate or required.

Intersection analysis and improvements also generally fall outside of the RTP, and capacity improvements recommended in this plan generally apply to links in the regional system, not intersections.

For the purpose of demonstrating local compliance with Table 1.2 as part of a periodic review or plan amendment, the following procedure for conducting the motor vehicle congestion analysis shall be used:

1. *Analysis* – A transportation need is identified in a given location when analysis indicates that congestion has reached the level indicated in the “exceeds deficiency threshold” column of Table 1.2 and that this level of congestion will negatively impact accessibility, as determined through Section 6.4.7(2). The analysis should consider a mid-day hour appropriate for the study area and the appropriate two-hour peak-hour condition, either A.M. or P.M. or both, to address the problem. Other non-peak hours of the day, such as mid-day on Saturday, should also be considered to determine whether congestion is consistent with the acceptable or preferred operating standards identified in Table 1.2. The lead agency or jurisdictions will be responsible for determining the appropriate peak and non-peak analysis periods.

An appropriate solution to the need is determined through requirements contained in this chapter. For regional transportation planning purposes, the recommended solution should be consistent with the acceptable or preferred operating standards identified in Table 1.2. A city or county may choose a higher level-of-service operating standard where findings of consistency with section 6.4.4 have been developed as part of the local planning process. The requirements in Section 6.6.2 shall also be satisfied in order to add any projects to the RTP based on the higher level-of-service standard.

2. *Accessibility* – If a deficiency threshold is exceeded on the regional transportation system as identified in Table 1.2, cities and counties shall evaluate the impact of the congestion on regional accessibility using the best available quantitative or qualitative methods. If a determination is made by Metro that exceeding the deficiency threshold negatively impacts regional accessibility, cities and counties shall follow the transportation systems

analysis and transportation project analysis procedures identified in Sections 6.4.2 and 6.7.3.

3. *Consistency* – The identified function or the identified capacity of a road may be significantly affected by planning for 2040 Growth Concept design types. Cities and counties shall take actions described in Section 6.7 of this chapter, including amendment of their transportation plans and implementing ordinances, if necessary, to preserve the identified function and identified capacity of the road, and to retain consistency between allowed land-uses and planning for transportation facilities.

#### 6.4.8 Future RTP Refinements Identified through Local TSPs

The 2000 RTP represents the most extensive update to the plan since it was first adopted in 1982. It is the first RTP to reflect the 2040 Growth Concept, Regional Framework Plan and state Transportation Planning Rule. In the process of addressing these various planning mandates, the plan's policies and projects are dramatically different than the previous RTP. This update also represents the first time that the plan has considered growth in urban reserves located outside the urban growth boundary but expected to urbanize during the 20-year plan period. As a result, many of the proposed transportation solutions are conceptual in nature, and must be further refined.

In many cases, these proposed transportation solutions were initiated by local jurisdictions and special agencies through the collaborative process that Metro used to develop the updated RTP. However, the scope of the changes to the RTP will require most cities and counties and special agencies to make substantial changes to comprehensive, facility and service plans, as they bring local plans into compliance with the regional plan. In the process of making such changes, local jurisdictions and special agencies will further refine many of the solutions included in this plan.

Such refinements will be reviewed by Metro and, based on a finding of consistency with RTP policies, specifically proposed for inclusion in future updates to the RTP. Section 6.3 requires Metro to develop a process for to ensure consistency between the 2000 RTP and local TSPs by developing a process for tracking local project and functional classification refinements that are consistent with the RTP, but require a future amendment to be incorporated into the RTP. This process will occur concurrently with overall review of local plan amendments, facility plans and service plans, and is subject to the same appeal and dispute resolution process. While such proposed amendments to the RTP may not be effective until a formal amendment has been adopted, the purpose of endorsing such proposed changes is to allow cities and counties to retain the proposed transportation solutions in local plans, with a finding of consistency with the RTP, and to provide a mechanism for timely refinements to local and regional transportation plans.

#### 6.4.9 Local ~~2020~~2025 Forecast – Options for Refinements

The 2000 RTP is a 20-year plan, with a ~~2020~~2025 forecast developed from ~~1994-2000~~ base data. Metro produced an updated ~~2020~~2025 forecast that accounts for ~~urban reserve~~urban growth boundary actions, and estimates the amount of jobs and housing expected ~~in urban reserves in~~ ~~2020~~2025. Local TSPs using the ~~2020~~2025 forecast may experience different modeling outcomes in these areas than were observed during the development of the RTP. Therefore, Metro will accept local plans under the following four options:

1. Local plans in areas unaffected by urban reserve-growth boundary actions may be developed using the RTP forecast for 20202025 (which is based on 1994-2000 data).
2. Local plans already under way at the time of RTP adoption, and which include areas affected by urban reserve-growth boundary actions, may be developed using the RTP forecast for 20202025 (based on 1994-2000 data), with population and employment allocations adjusted by the local jurisdiction to reflect urban reserve actions. However, adjustments to population and employment allocations shall (a) remain within the holding capacity of a traffic zone or area, as defined by Metro's productivity analysis, and (b) not exceed traffic zone or area assumptions of the updated 20202025 forecast.
3. Local plans in areas affected by urban reserve actions may use the updated 20202025 forecast, and any subsequent differences in proposed transportation solutions will be reconciled during Metro's review of the local plan.
4. Local plans may be based on updated, locally developed population and employment data, conditions and 20202025 forecasts. However, population and employment data and forecasts, and the methodology for generating the data and forecasts shall be coordinated at the county level, and accepted by Metro technical staff and TPAC as statistically valid. Subsequent adjustments to the population and employment allocations for traffic zones may be made in the local planning to reflect updated population and employment data and 20202025 forecasts. Metro shall consider the updated locally developed data and forecasts in future RTP forecasts of population and employment. Subsequent differences in local TSP project recommendations that result from the differences in population and employment forecasts will be resolved in the next scheduled RTP update.

Metro will update the 20202025 population and employment allocations periodically to reflect local and regional land-use decisions. For example, changes to the 20202025 population and employment allocations could result if an urban reserve area is reduced in size or taken out altogether if the urban growth boundary is expanded or if local zoning capacity is amended to increase or decrease. The provisions in this section are for the purpose of TSP development and analysis, and do not necessarily apply to other planning activities.

#### **6.4.10 Transit Service Planning**

Efficient and effective transit service is critical to meeting mode-split targets, and the regional transit functional classifications are tied to 2040 Growth Concept land-use components. Local transportation system plans shall include measures to improve transit access, passenger environments and transit service speed and reliability for:

- rail station areas, rapid bus and frequent bus corridors where service is existing or planned
- regional bus corridors where services exists at the time of TSP development

To ensure that these measures are uniformly implemented, cities and counties shall:

1. Adopt a transit system map, consistent with the transit functional classifications shown in Figure 1.16, as part of the local TSP.
2. Amend development code regulations to require new retail, office and institutional buildings on sites at major transit stops to:
  1. Locate buildings within 20 feet of or provide a pedestrian plaza at the major transit stops
  2. Provide reasonably direct pedestrian connections between the transit stop and building entrances on the site
  3. Provide a transit passenger landing pad accessible to disabled persons (if not already existing to transit agency standards)
  4. Provide an easement or dedication for a passenger shelter and underground utility connection from the new development to the transit amenity if requested by the public transit provider
  5. Provide lighting at a transit stop (if not already existing to transit agency standards).
3. Consider designating pedestrian districts in a comprehensive plan or other implementing land use regulations as a means of meeting or exceeding the requirements of OAR 660-012-0045 (4a-c) and this plan section 6.4.10(2) above. Pedestrian district designation shall address the following criteria:
  - (a) A connected street and pedestrian network, preferably through a local street and pedestrian network plan covering the affected area.
  - (b) Designated pedestrian districts should specifically consider, but are not limited to these elements: Transit/pedestrian/bicycle interconnection; parking and access management; sidewalk and accessway location and width; alleys; street tree location and spacing; street crossing and intersection design for pedestrians; street furniture and lighting at a pedestrian scale; and traffic speed. When local transportation system plans are adopted, designated pedestrian districts should be coordinated with the financing program required by the Transportation Planning Rule.
4. Provide for direct and logical pedestrian crossings at transit stops and marked crossings at major transit stops.
5. Consider street designs which anticipate planned transit stop spacing, location, and facilities (such as shelters, benches, signage, passenger waiting areas) and are consistent with the Creating Livable Streets design guidelines.

Public transit providers shall consider the needs and unique circumstances of special needs populations when planning for service. These populations include, but are not limited to, students, the elderly, the economically disadvantaged, the mobility impaired and others with special needs. Consideration shall be given to:

1. adequate transit facilities to provide service
2. hours of operation to provide transit service corresponding to hours of operation of institutions, employers and service providers to these communities
3. adequate levels of transit service to these populations relative to the rest of the community and their special needs

## **6.5 Metropolitan Transportation Improvement Program (MTIP)**

### **6.5.1 The Role of the MTIP in Regional Planning**

An important tool for implementing the RTP is the Metropolitan Transportation Improvement Program (MTIP). The region's four-year funding document, the MTIP schedules and identifies funding sources for projects of regional significance to be built during a four-year period. Federal law requires that all projects using federal funds be included in the MTIP. In developing the MTIP, the region gives top priority to strategic transportation investments that leverage and reinforce the urban form outlined in Chapter 1, of this plan. The MTIP is adopted by Metro and the Oregon Transportation Commission for inclusion into a unified State TIP (STIP), that integrates regional and statewide improvement plans. The MTIP is updated every two years.

ISTEA and TEA-21 created important new fiscal requirements for the TIP. The TIP is fiscally constrained and includes only those projects for which federal resources are reasonably available. Projects are grouped by funding category, with project costs not to exceed expected revenue sources. The MTIP financial plan is not comprehensive; it covers only federal funds for capital improvements, and does not include operations, maintenance and preservation or local funds for capital costs.

It is the responsibility of the cities, counties, ODOT, Tri-Met and the Port of Portland to implement necessary improvements to the regional system, as well as those needed for local travel. These agencies are eligible to receive federal funds allocated through the MTIP process for projects included in the RTP. The TIP is prepared by Metro in consultation with these agencies. Inter-regional coordination throughout the planning and programming process will help to ensure that improvement projects are consistent with regional objectives and with each other.

Projects included in the MTIP must also be included in the RTP financially constrained system. For the purpose of this plan, the assumptions used to develop the financially constrained system are defined in Appendix 4.2. Projects included in the financially constrained system are identified by an asterisk (\*) in Figures 5.8 through 5.14 in Chapter 5. However, while the financially constrained system should provide the basis for most MTIP funding decisions, other projects from the RTP may

also be selected for funding. In the event that such projects are drawn from the plan for funding, the RTP financially constrained system will be amended to include the project or projects. In addition, when the financially constrained system is amended, continued financial constraint must be demonstrated by identifying additional revenues or removal of other projects from the financially constrained system. Except in the case of exempt projects (as defined by the federal and state conformity rules) such actions require an air quality conformity determination.

### **6.5.2 How the MTIP is Developed**

Though the MTIP development process is initiated by Metro, the work begins at the local level, with city and county elected officials receiving input from citizens through local planning efforts, and later sharing their transportation needs at the Joint Policy Advisory Committee on Transportation (JPACT). Additional public input is received at the regional level, as well, when JPACT and the Metro Council review the MTIP for final approval. Upon adoption by the Council, the MTIP is submitted to the Oregon Transportation Commission (OTC) for approval as part of the State Transportation Improvement Plan (STIP).

In 1999, more than \$75 million in regional funds were allocated to a wide variety of projects, ranging from safety improvements and system expansion to projects that leverage the 2040 Growth Concept. Priorities 2000 was the process for developing the fiscal year 2000 to 2003 MTIP. The first step in Priorities 2000 was developing criteria for ranking projects by transportation modes. The second step was a solicitation for project submittals. Local governments, Tri-Met and the Port of Portland submitted 150 transportation projects, with a cost of more than \$300 million, for funding consideration. In the third step, projects were ranked by technical and administrative criteria. Next, the Priorities 2000 projects were reviewed at a series of public workshops and hearings held throughout the region.

The final funding recommendation included 65 projects. The funding package broke new ground in Metro's objective of creating strong linkages between planned land-uses and the allocation of transportation funding. Based on the flow of federal transportation funding, the "Priorities" process for updating the MTIP and allocating revenues will occur every two years.

### **6.5.3 RTP Implementation Benchmarks**

The RTP establishes an general direction for implementation of needed improvements that reflects a wide variety of factors, including expected development trends, existing safety and operational deficiencies, and anticipated revenue. The project timing proposed in the RTP also reflects an effort to create a balanced, multi-modal transportation system. As such, the projects are organized according to those needed during the first five, second five and final ten years of the planning period. To ensure that incremental funding decisions that occur through the MTIP follow this general RTP direction, benchmarks shall be established for monitoring RTP implementation over time, and:

1. The benchmarks shall be tied to Chapter 1 objectives and shall address the relative performance of the system and the degree to which the various RTP projects are being implemented.

2. Findings for consistency with the benchmarks shall be developed as part of the biennial MTIP update, or as necessary in conjunction with other RTP monitoring activities.

In addition, benchmarks should be designed to track the following general information to the degree practicable for ongoing monitoring:

- progress on financing the strategic system
- progress in completing the modal systems described in Chapter 1
- relative change in system performance measures
- progress toward land use objectives related to the RTP
- relative comparisons with similar metropolitan regions on key measures

#### **6.5.4 Improvements in Urban Reserves**

During the MTIP process, improvements that add capacity or urban design elements to rural facilities in urban reserves should:

- be coordinated with expansion of the urban growth boundary
- not encourage development outside of the urban growth boundary
- not disrupt the economic viability of nearby rural reserves
- be consistent with planned urban development or other transportation facilities

## **6.6 Process for Amending the RTP**

### **6.6.1 RTP Policy, System Map and Compliance Criteria Amendments**

When Metro amends policies or system maps in Chapter 1 of this plan or compliance criteria in this chapter, it will evaluate and adopt findings regarding consistency with the Regional Framework Plan. Decisions on amendments made at this level are land-use decisions for need, mode, corridor, general scope and function of a proposed project. Subsequent land-use decisions on final project design and impact mitigation will be needed prior to construction. Such analysis to evaluate impacts could lead to a “no-build” decision where a proposed project is not recommended for implementation, and would require reconsideration of the proposed project or system improvements. As such, amendments at this level shall be reviewed through the post-acknowledgement process. However, a decision on an amendment to the Regional Transportation Plan should not foreclose or appear to foreclose full and fair consideration of all relevant goal issues at such time that specific projects and programs are adopted by a local jurisdiction.

It is Metro's responsibility to adopt findings based on project need, mode, corridor, general scope and function of projects proposed in the Regional Transportation Plan. The affected jurisdiction is responsible for preparing the specific local plan amendments and findings related to specific location, project design and impact mitigation and for scheduling them for hearing before the governing body in time for action by that body by the time required.

### **6.6.2 RTP Project Amendments**

The RTP establishes a comprehensive policy direction for the regional transportation system and recommends a balanced program of transportation investments to implement that policy direction. However, the recommended investments do not solve all transportation problems and are not intended to be the definitive capital improvement program on the local transportation system for the next 20 years.

Rather, the RTP identifies the projects, programs or further refinement studies required to adequately meet regional transportation system needs during the 20-year planning period. Local conditions will be addressed through city and county TSPs, and will require additional analysis and improvements to provide an adequate transportation system. Section 6.7 of this chapter anticipates such refinements, particularly given the degree to which this RTP has been updated from previous plans. Similarly, refinements to the RTP may result from ongoing corridor plans or area studies. The following processes may be used to update the RTP to include such changes:

1. Amendments resulting from major studies: as the findings of such studies are produced, they will be recommended by a resolution of JPACT and the Metro Council. These amendments must be incorporated into the RTP through a quasi-judicial or legislative process, as needed.
2. Amendments resulting from local TSPs: new roadway, transit, bikeway, pedestrian, freight and demand management projects necessary to meet the objectives of the RTP shall be accompanied by an demonstration of consistency with the RTP based on the following criteria:
  - a. The objectives to be met by the proposed projects(s) are consistent with RTP goals, policies and objectives (Chapter 1).
  - b. The proposed action is consistent with the modal function of the facility as defined in Chapter 1.
  - c. The impact of the proposed projects(s) on the balance of the regional system is evaluated through a CMS analysis.
  - d. The proposed action is needed to achieve the motor vehicle level-of-service performance criteria identified in the RTP, or alternative performance criteria adopted in local TSPs under the provisions of Section 6.4.7, as follows:
    - A) principal, major and minor arterial capacity improvements are necessary to maintain compliance with Policy 13.0, Table 1.2, or alternative performance criteria adopted in local TSPs. Improvements that are designed to provide a higher level of service than

the minimum acceptable standard established in Policy 13.0 can be designed and/or provided at the option of the implementing jurisdiction. Such actions must be consistent with the RTP as outlined in this section and demonstrate that either:

- i) a long-range evaluation of travel demand indicates a probable need for right-of-way preservation beyond that necessary for the 20-year project design, or
- ii) the additional service provided by the higher level design is the result of a design characteristic necessary to achieve the minimum motor vehicle performance measure

B) local transportation system improvements must be consistent with the following:

- i) the local system must adequately serve the local travel demands expected from development of the land-use plan to the year ~~2020~~2025 to ensure that the regional system is not overburdened with local traffic
- ii) local analysis shall incorporate required street connectivity plans
- iii) the local system provides continuity between neighboring jurisdictions, consistency between city and county plans for facilities within city boundaries and consistency between local jurisdictions and ODOT plans

- e. The need for the proposed action based on Metro's adopted population and employment projections, or refinements as noted in Section 6.4.8.
- f. The proposed action is consistent with the regional non-SOV modal targets specified in Table 1.3 of Chapter 1.
- g. The proposed action represents the lowest cost system alternative solution acceptable.
- h. The proposed action is not prohibited by unacceptable environmental impacts or other considerations.
- i. A goal, policy or system plan element in the federal RTP would likely change as the result of a "no-build" project decision later in the process.
- j. The project is in the local jurisdiction's TSP, or a final local land-use action occurred.
- k. The project is contained in or consistent with the RTP, adopted comprehensive plan, or implementation plan(s) of any other affected jurisdictions.
- l. Sufficient public involvement activities have occurred regarding the proposed action.

The amount of information required to address these criteria shall be commensurate with the scope of the project. Such additions will be amended into the RTP as part of the project update process described in this section. Operations, maintenance and safety improvements are deemed

consistent with the policy intent of the RTP if (a) they are needed to serve the travel demand associated with Metro's adopted population and employment forecasts, and (b) they are consistent with affected jurisdictional plans.

3. Amendments resulting from updates to the Regional Framework Plan or related functional plans.

### **6.6.3 Congestion Management Requirements**

This section applies to any amendments to the Regional Transportation Plan to add significant single occupancy vehicle (SOV) capacity to multi-modal arterials and/or highways. Consistent with Federal Congestion Management System requirements (23 CFR Part 500) and TPR system planning requirements (OAR 660-12), the following actions shall be considered through the RTP when recommendations are made to revise the RTP to define the need, mode, corridor and function to address an identified transportation needs, and prior to recommendations to add significant SOV capacity:

1. Regional transportation demand strategies
2. Regional transportation system management strategies, including intelligent transportation systems (ITS)
3. High occupancy vehicle (HOV) strategies
4. Regional transit, bicycle and pedestrian system improvements to improve mode split
5. Unintended land-use and transportation effects resulting from a proposed SOV project or projects
6. Effects of latent demand from other modes, routes or time of day from a proposed SOV project or projects
7. If upon a demonstration that the considerations in 1 through 6 do not adequately and cost-effectively address the problem, a significant capacity improvement may be included in the regional transportation plan

### **6.6.4 Plan Maintenance**

The RTP is updated every three to five years, and covers a minimum 20-year plan period. Periodic amendments to the plan will also occur, as needed, to reflect recommendations from corridor or sub-area planning studies. As preparation for each scheduled update, development throughout the region will be monitored to determine whether growth (and the associated travel demand) occurs as forecast. Metro will review its population and employment forecasts annually and update them at least every five years for the following conditions:

- national or regional growth rates differ substantially from those previously assumed
- significant changes in growth rate or pattern develop within jurisdictions

- changes to the urban growth boundary are adopted
- a jurisdiction substantially changes its land-use plan

New information gathered during the course of the year on such issues as energy price and supply, population and employment growth, inflation and new state and federal laws may result in different conditions to be addressed by the plan. These modifications will be incorporated as needed during periodic updates to the plan. Each update will occur in cooperation with affected jurisdictions, state agencies and public transit providers.

## **6.7 Project Development and Refinement Planning**

### **6.7.1 Role of RTP and the Decision to Proceed with Project Development**

Metro is the regional planning agency for the metropolitan area. Metro does not complete local transportation system plans, engineer or build transportation facilities or permit land uses or transportation projects. These activities occur at the local level. After a project has been incorporated in the RTP, it is the responsibility of the local sponsoring jurisdiction to determine the details of the project (design, operations, etc.). The local jurisdiction responsible for the applicable transportation system plan shall reach a decision on whether to build the improvement based upon detailed environmental impact analysis, adoption of actions to mitigate impacts and findings demonstrating consistency with applicable comprehensive plans and applicable statewide planning goals. If this process results in a decision not to build the project, the RTP will be amended to delete the recommended improvement and an alternative must be identified to address the original transportation need.

### **6.7.2 New Solutions Re-submitted to RTP if No-Build Option is Selected**

When a "no-build" alternative is selected at the conclusion of a project development process, a new transportation solution must be developed to meet the original need identified in the RTP, or a finding that the need has changed or been addressed by other system improvements. In these cases, the new solution or findings will be submitted as an amendment to the RTP, and would also be evaluated at the project development level.

### **6.7.3 Project Development Requirements**

Transportation improvements where need, mode, function and general location have already been identified in the RTP and local plans for a specific alignment must be evaluated on a detailed, project development level. This evaluation is generally completed at the local jurisdiction level, or jointly by affected or sponsoring agencies, in coordination with Metro. The purpose of project development planning is to consider project design details and select a project alignment, as necessary, after evaluating engineering and design alternatives, potential environmental impacts and consistency with applicable comprehensive plans and the RTP. The project need, mode, function and general location do not need to be addressed at the project level, since these findings have been previously established by the RTP.

The TPR and Metro's Interim 1996 Congestion Management System (CMS) document require that measures to improve operational efficiency be addressed at the project level, though system-wide considerations are addressed by the RTP. Therefore, demonstration of compliance for projects not included in the RTP shall be documented in a required Congestion Management System report that is part of the project-level planning and development (Appendix D of the Interim CMS document). In addition, the CMS requires that street design guidelines be considered as part of the project-level planning process. This CMS requirement does not apply to locally funded projects on local facilities. Unless otherwise stipulated in the MTIP process, these provisions are simply guidelines for locally funded projects.

Therefore, in addition to system-level congestion management requirements described in Section 6.6.3 in this chapter, cities, counties, TriMet, ODOT, and the Port of Portland shall consider the following project-level operational and design considerations during transportation project analysis as part of completing the CMS report:

1. Transportation system management (e.g., access management, signal inter-ties, lane channelization, etc.) to address or preserve existing street capacity.
2. Street design policies, classifications and design principles contained in Chapter 1 of this plan. See Section 1.3.5, Policy 11.0, Figure 1.4. Implementing guidelines are contained in *Creating Livable Streets: Street Design Guidelines for 2040* (2nd edition, 2002) or other similar resources consistent with regional street design policies.
3. Environmental design guidelines, as contained in *Green Streets: Innovative Solutions for Stormwater and Street Crossings* (2002), and *Trees for Green Streets: An Illustrated Guide* (2002), or other similar resources consistent with federal regulations for stream protection.

Transportation providers in the Metro region, including the cities and counties, TriMet, ODOT, and the Port of Portland are required to amend their comprehensive plans, implementing ordinances and administrative codes, if necessary, to consider the *Creating Livable Streets* design guidelines as part of project development. Transportation providers shall amend design codes, standards and plans to allow consideration of the guidelines contained in *Green Streets: Innovative Solutions for Stormwater and Street Crossings*.

#### **6.7.4 Refinement Planning Scope and Responsibilities**

In some areas defined in this section, the need for refinement planning is warranted before specific projects or actions that meet and identified need can be adopted into the RTP. Refinement plans generally involve a combination of transportation and land use analysis, multiple local jurisdictions and facilities operated by multiple transportation providers. Therefore, unless otherwise specified in this section, Metro or ODOT will initiate and lead necessary refinement planning in coordination with other affected local, regional and state agencies. Refinement planning efforts will be multi-modal evaluations of possible transportation solutions in response to needs identified in the RTP, including land use alternatives and to address consistency with applicable statewide planning goals. Refinement plans fall into two broad groups of scope and complexity:

- Type I - Major corridor refinements are necessary where a transportation need exists, but mode, function and general location of a transportation improvement are not determined, and a range of actions must be considered prior to identifying specific projects.
- Type II - Minor corridor refinements are necessary where both the need and mode for a transportation improvement are identified in the RTP, but a specific project has not been identified.

Appendix 3.1 describes the ~~2000 RTP~~ prioritization for major corridor refinements and minor corridor refinements defined by the Corridor Studies process in 2000. Refinement plan and corridor study prioritization and specific scope for each corridor is subject to annual updates as part of the Unified Work Plan (UWP).

#### 6.7.5 Type I – Major Corridor Refinements

Type I, major corridor refinements will be conducted by state or regional agencies working in partnership with local governments in the following areas. In each case, a transportation need has been established by the RTP, and in some cases, mode, function or general location may be determined or the decision on these elements narrowed at the TSP level to focus the refinement planning work. A transportation need is identified when regional standards for safety, mobility, or congestion are exceeded. In many of these corridors, RTP analysis indicates several standards are exceeded.

The purpose of Type I major corridor refinements is to develop an appropriate transportation strategy or solution through the corridor planning process that determined mode, function and general location of a project or set of projects. For each corridor, a number of transportation alternatives will be examined over a broad geographic area or through a local TSP to determine a recommended set of projects, actions or strategies that meet the identified need. This section of the RTP also identifies a number of corridor planning issues that shall be addressed as part of the refinement planning process.

For refinement planning in corridors located outside the urban growth boundary, this work shall also address relevant statewide planning goal exception requirements pursuant to Section 660.012.0070 of the state transportation planning rule. These findings shall expand on exceptions findings made as part of the 2000 RTP adoption ordinance, but address more localized issues relevant to the refinement level of planning.

The specific project recommendations from Type I major corridor refinements are then incorporated into the RTP, as appropriate. This section contains the following specific considerations that must be incorporated into corridor studies as they occur:

##### *Interstate-5 North (I-84 to Clark County)*

This heavily traveled route is the main connection between Portland and Vancouver. In addition to a number of planned and proposed highway capacity improvements, light rail is proposed along Interstate Avenue to the Expo Center, and may eventually extend to Vancouver. As improvements are implemented in this corridor, the following design considerations should be addressed:

- consider HOV lanes and peak period pricing
- transit alternatives from Vancouver to the Portland Central City (including light rail transit and express bus)
- maintain an acceptable level of access to the central city from Portland neighborhoods and Clark County
- maintain off-peak freight mobility, especially to numerous marine, rail and truck terminals in the area
- consider adding reversible express lanes to I-5
- consider new arterial connections for freight access between Highway 30, port terminals in Portland and port facilities in Vancouver, Wa.
- maintain an acceptable level of access to freight intermodal facilities and to the Northeast Portland Highway
- construct interchange improvements at Columbia Boulevard to provide freight access to Northeast Portland Highway
- address freight rail network needs
- consider additional Interstate Bridge capacity sufficient to handle project needs
- develop actions to reduce through-traffic on MLK and Interstate to allow main street redevelopment

*Interstate-5 South (Highway 217 to ~~Wilsonville~~Willamette River/Boones Bridge)*

This facility serves as the major southern access to and from the central city. The route also serves as an important freight corridor, where Willamette Valley traffic enters the region at the Wilsonville “gateway,” and provides access to Washington County via Highway 217. Projections for this facility indicate that growth in traffic between the Metro region and the Willamette Valley will account for as much as 80 percent of the traffic volume along the southern portion of I-5, in the Tualatin and Wilsonville area. .A joint ODOT and Wilsonville study<sup>1</sup> concludes that in 2030 widening of I-5 to eight lanes would be required to meet interstate freeway capacity standards set by Metro and ODOT and that freeway access capacity would not be adequate with an improved I-5/Wilsonville Road interchange. For ~~this~~ these reasons, the appropriate improvements in this corridor are unclear at this time. However, I-5 serves as a critical gateway for regional travel and commerce, and an acceptable transportation strategy in this corridor has statewide significance. A major corridor study is proposed to address the following issues:

<sup>1</sup> I-5/Wilsonville Freeway Access Study, DKS Associates, November 2002

- [the effects of widening I-205 on the I-5 South corridor](#)
- [the effects of the I-5 to 99W Connector on the Stafford Road interchange and the resultant need for increased freeway access](#)
- the effects of peak period congestion in this area on regional freight mobility and travel patterns
- the ability of inter-city transit service, to/from neighboring cities in the Willamette Valley, including commuter rail, to slow traffic growth in the I-5 corridor
- the ability to maintain off-peak freight mobility with capacity improvements
- the potential for better coordination between the Metro region and valley jurisdictions on land-use policies
- the effects of a planned long-term strategy for managing increased travel along I-5 in the Willamette Valley
- [the effects of UGB expansion and Industrial Lands Evaluation studies on regional freight mobility](#)
- [the effects to freight mobility and local circulation due to diminished freeway access capacity in the I-5/Wilsonville corridor](#)

In addition, the following design elements should be considered as part of the corridor study:

- peak period pricing and HOV lanes for expanded capacity
- provide rapid bus service on parallel Barbur route, connecting Wilsonville to the central city
- provide additional overcrossings in West Portland town center to improve local circulation and interchange access
- [provide additional freeway access improvements in the I-5/Wilsonville corridor to improve freight mobility and local circulation, \(e.g. a new Boeckman Road interchange\)](#)
- add capacity to parallel arterial routes, including 72nd Avenue, Boones Ferry, Lower Boones Ferry and Carmen Drive
- add overcrossings in vicinity of Tigard Triangle to improve local circulation
- extend commuter rail service from Salem to the central city, Tualatin transit center and Milwaukie, primarily along existing heavy rail tracks
- [additional I-5 mainline capacity \(2030 demand on I-5 would exceed capacity\)](#)

- [provision of auxiliary lanes between all I-5 freeway on- and off-ramps in Wilsonville](#)

#### *Interstate 205*

Improvements are needed in this corridor to address existing deficiencies and expected growth in travel demand in Clark, Multnomah and Clackamas counties. Transportation solutions in this corridor should address the following needs and opportunities:

- provide for some peak period mobility for longer trips
- preserve freight mobility from I-5 to Clark County, with an emphasis on connections to Highway 213, Highway 224 and Sunrise Corridor
- maintain an acceptable level of access to the Oregon City, Clackamas and Gateway regional centers and Sunrise industrial area
- maintain acceptable levels of access to PDX, including air cargo access

Potential transportation solutions in this corridor should evaluate the potential of the following design concepts:

- auxiliary lanes added from Airport Way to I-84 East
- consider express, peak period pricing or HOV lanes as a strategy for expanding capacity
- relative value of specific ramp, overcrossing and parallel route improvements
- eastbound HOV lane from I-5 to the Oregon City Bridge
- truck climbing lane south of Oregon City
- potential for rapid bus service or light rail from Oregon City to Gateway
- potential for extension of rapid bus service or light rail north from Gateway into Clark County
- potential for refinements to 2040 land-use assumptions in this area to expand potential employment in the subarea and improve jobs/housing imbalance
- potential for re-evaluating the suitability of the Beaver Creek area for urban growth boundary expansion, based on ability to serve the area with adequate regional transportation infrastructure

#### *McLoughlin-Highway 224*

Long-term improvements are needed in this corridor to preserve access to and from the Central City from the Clackamas County area, to provide access to the developing Clackamas regional center and to support downtown development in the Milwaukie town center. The recently completed South/North light rail study demonstrated a long-term need for high-capacity transit service in this corridor. The long-term transit need is critical, as demonstrated in the RTP analysis, where both highway and high-capacity transit service were needed over the 20-year plan period to keep pace with expected growth in this part of the region. The 2040 Growth Concept also calls for the regional centers and central city to be served with light rail. Transportation solutions in this corridor should address the following design considerations

- institute aggressive access management throughout corridor, including intersection grade separation along Highway 224 between Harrison Street and I-205
- design access points to McLoughlin and Highway 224 to discourage traffic spillover onto Lake Road, 34th Avenue, Johnson Creek boulevard, 17th Avenue and Tacoma Street
- monitor other local collector routes and mitigate spillover effect from congestion on McLoughlin and Highway 224
- consider an added reversible HOV or peak-period priced lane between Ross Island Bridge and Harold Street intersection
- expand highway capacity to a total of three general purpose lanes in each direction from Harold Street to I-205, with consideration of express, HOV lanes or peak period pricing for new capacity
- provide a more direct transition from McLoughlin to Highway 224 at Milwaukie to orient long trips and through traffic onto Highway 224 and northbound McLoughlin
- provide improved transit access to Milwaukie and Clackamas regional centers, including rapid bus in the short term, and light rail service from Clackamas regional center to Central City in the long term

#### *~~Powell Boulevard/Foster Road~~*

~~The concentration potential urban growth boundary expansions in Clackamas County and southeast Multnomah County will place heavy demands on connecting routes that link these areas with employment centers in Portland and Multnomah County. Of these routes, the Foster/Powell corridor is most heavily affected, yet is also physically constrained by slopes and the Johnson Creek floodplain, making capacity improvements difficult. More urban parts of Foster and Powell Boulevard are equally constrained by existing development, and the capacity of the Ross Island Bridge.~~

~~As a result, a corridor study is needed to explore the potential for high capacity transit strategies that provide access from the developing Pleasant Valley and Damascus areas to employment areas~~

along the Foster/Powell corridor, Gresham regional center, Columbia South Shore industrial area and central city. Such a study should consider the following transportation solutions:

- aggressive transit improvements, including rapid bus service from Central City to Damascus town center via Powell and Foster roads, and primary bus on 172nd Avenue and to the Gresham regional center, Eastside MAX and Columbia South Shore
- capacity improvements that would expand Foster Road from two to three lanes from 122nd to 172nd avenues, and from two to five lanes from 172nd Avenue to Highway 212, phased in coordination with planned capacity improvements to Powell Boulevard between I-205 and Eastman Parkway
- extensive street network connection improvements in the Mount Scott and Pleasant Valley areas to reduce local travel demand on Foster Road and Powell Boulevard, and to improve access between these areas and adjacent East Multnomah and northeast Clackamas Counties
- ITS or other system management approaches to better accommodate expected traffic growth on the larger southeast Portland network, East Multnomah and northeast Clackamas County network

## **Powell Boulevard/Foster Road Phase 2**

The Powell Boulevard/Foster Road Corridor represents both a key transportation challenge and an opportunity to meet 2040 regional land use goals. The Powell/Foster Corridor is a top priority among corridors requiring refinement plans. Despite policy changes to level-of-service standards that permit greater levels of congestion, significant multi-modal improvements will be needed in order to continue to serve transportation needs of the communities and industrial areas in southeast Portland and Gresham. The corridor is also critical to providing access to the planned growth areas in Pleasant Valley, along with Damascus and Springwater that have recently been added to the Urban Growth Boundary. In addition, the corridor is constrained by significant topographical and environmental features.

As a result of the findings from Phase 1 of the Powell Boulevard/Foster Road Corridor Plan, which was completed in 2003, specific multi-modal projects have been identified that address transportation needs on Powell Boulevard between inner SE Portland and Gresham, and on Foster Road west of Barbara Welch Road. System level decisions for transit service were also made for the corridor.

Several outstanding transportation problems in the Pleasant Valley, Damascus and south Gresham areas, require additional planning work before specific multi-modal projects can be developed and implemented. The Phase 2 plan should closely coordinated with concept plans for Damascus and the Springwater area, in order to incorporate the updated land use and transportation assumptions. It should examine the following transportation solutions and strategies:

- Determine the appropriate cross section on Foster Road between Barbara Welch Road and Jenne Road and the project timing, to meet roadway, transit, pedestrian and bike needs.
- Explore possibilities for potential new street connection improvements in the Mount Scott area that reduce local travel demand on Foster Road and improve access to the Pleasant Valley area.
- Develop conceptual designs and determine right-of-way for an improvement and extension of SE 174<sup>th</sup> Avenue between Powell Boulevard and Giese Road, or another new north-south roadway in the area, to accommodate travel demand and improve access to Pleasant Valley. The alignment should consider engineering feasibility, land use and environmental affects, safety, and overall costs.
- Further define the three-lane Highland Drive and Pleasant View Drive option that was recommended as part of Phase 1. This option needs to address design, operational, and safety-related issues.
- Work with local jurisdictions to provide for access management on arterials serving Pleasant Valley and Damascus.
- Address other regional north-south transportation needs identified by the Damascus Concept Plan and Springwater concept planning effort. Further evaluate alignment issues, engineering cost estimates, and right-of-way impacts of future roadway projects north of Damascus that are identified as part of the concept planning effort.

### *Highway 217*

Improvements in this corridor are needed to accommodate expected travel demand, and maintain acceptable levels of access to the Beaverton and Washington Square regional centers. The following design and functional considerations should be included in the development of transportation solutions for this corridor:

- expand highway to include a new lane in each direction from I-5 to US 26
- address the competing needs of serving localized trips to the Washington Square and Beaverton regional centers and longer trips on Highway 217
- consider express, HOV lanes and peak period pricing when adding new capacity
- design capacity improvements to maintain some mobility for regional trips during peak travel periods
- design capacity improvements to preserve freight mobility during off-peak hours
- retain auxiliary lanes where they currently exist
- improve parallel routes to accommodate a greater share of local trips in this corridor

- consider improve light rail service or rapid bus service with substantially improved headways
- coordinate with planned commuter rail service from Wilsonville to Beaverton regional center

### *Tualatin Valley Highway*

A number of improvements are needed in this corridor to address existing deficiencies and serve increased travel demand. One primary function of this route is to provide access to and between the Beaverton and Hillsboro regional centers. Tualatin Valley Highway also serves as an access route to Highway 217 from points west along the Tualatin Valley Highway corridor. As such, the corridor is defined as extending from Highway 217 on the east to First Avenue in Hillsboro to the west, and from Farmington Road on the south to Baseline Road to the north. The following design considerations should be addressed as part of a corridor study:

- develop an access management plan as part of a congestion management strategy
- implement TSM and other interim intersection improvements at various locations between Cedar Hills Boulevard and Brookwood Avenue
- the relative trade-offs of a variety of capacity and transit improvements, including:
  - a. improvements on parallel routes such as Farmington, Alexander, Baseline and Walker roads as an alternative to expanding Tualatin Valley Highway
  - b. seven-lane arterial improvements from Cedar Hills Boulevard or Murray Boulevard to Brookwood Avenue or Baseline Road in Hillsboro
  - c. a limited access, divided facility from Cedar Hills Boulevard or Murray Boulevard to Brookwood Avenue, with three lanes in each direction and some grade separation at major intersections
  - d. transit service that complements both the function of Tualatin Valley Highway and the existing light rail service in the corridor
- evaluate impacts of the principal arterial designation, and subsequent operation effects on travel within the Beaverton regional center
- evaluate motor vehicle and street design designations as part of the study to determine the most appropriate classifications for this route

### *North Willamette Crossing*

The RTP analysis shows a strong demand for travel between Northeast Portland Highway and the adjacent Rivergate industrial area and Highway 30 on the opposite side of the Willamette River. The St. Johns Bridge currently serves this demand. However, the St. Johns crossing has a number of limitations that must be considered in the long term in order to maintain adequate freight and

general access to the Rivergate industrial area and intermodal facilities. Currently, the St. Johns truck strategy is being developed (and should be completed in 2000) to balance freight mobility needs with the long-term health of the St. Johns town center. The truck strategy is an interim solution to demand in this corridor, and does not attempt to address long-term access to Rivergate and Northeast Portland Highway from Highway 30. Specifically, the following issues should be considered in a corridor plan:

- build on the St. Johns Truck Strategy recommendations to adequate freight and general access to Rivergate, while considering potentially negative impacts on the development of the St. Johns town center
- incorporate the planned development of a streamlined Northeast Portland Highway connection from I-205 to Rivergate to the crossing study
- include a long-term management plan for the St. John's Bridge, in the event that a new crossing is identified in the corridor plan recommendations

#### *Barbur Boulevard/ I-5*

This corridor provides access to the Central City and to neighborhoods and commercial areas in the inner southwest quadrant of the region. Barbur Boulevard is identified as a multi-modal facility with potential light rail or Rapid Bus as well as serving a regional role for motor vehicle, bicycle and pedestrian systems. I-5 in this corridor is a Main Roadway route for freight and a Principle Arterial for motor vehicles extending southward beyond the region.

Segments of both Barbur Boulevard and I-5 in this corridor experience significant congestion and poor service levels even with Priority System improvements, especially from the Terwilliger interchange northward. However, Rapid Bus service along Barbur and other expanded bus services are expected to experience promising ridership levels. Significant localized congestion occurs along the intersecting street segments of Bertha, Terwilliger and Capitol Highway/Taylor's Ferry roads. Broad street cross-sections, angled intersections and limited signalized crossing opportunities along Barbur Boulevard creates traffic safety hazards and inhibits walking to local destinations and access to transit services.

Transportation solutions in the corridor should include the following considerations:

- Regional and local transit services and facilities needed to serve the Barbur corridor within the RTP planning horizon.
- Possible new locations or relocations for I-5 on-ramps and off-ramps and street connections across the freeway right-of-way.
- Opportunities for new or improved local street connections to Barbur Boulevard.
- Facilities to improve bicycle and pedestrian safety along Barbur and access to transit services and local destinations.

- Traffic management and intelligent transportation system improvements along the corridor.
- Potential mainline freeway improvements including possible southbound truck climbing lanes.

#### 6.7.6 Type II - Minor Corridor Refinements

Type II minor corridor refinements will be conducted by state or regional agencies working in partnership with local governments in the following areas. In each case, a transportation need has been established by the RTP, and in some cases, mode, function or general location may be determined or the decision on these elements narrowed at the TSP level to focus the refinement planning work. A transportation need is identified when regional standards for safety, mobility, or congestion are exceeded. In many of these corridors, RTP analysis indicates several standards are exceeded.

The purpose of the minor corridor refinement process is to identify specific projects consistent with the identified need, mode and general corridor. These proposed transportation projects must be developed to a more detailed level before construction can occur. This process is described in Section 6.7.3 of this chapter. For minor refinement planning in corridors located outside the UGB, this work shall also address relevant statewide planning goal exception requirements pursuant to Section 660.012.0070 of the state transportation planning rule. These findings shall expand on exceptions findings made as part of the 2000 RTP adoption ordinance, but address more localized issues relevant to the refinement level of planning. The specific project recommendations from major corridor studies are then incorporated into the RTP, as appropriate.

Because minor corridor refinements are more specific in location and mode, local TSPs shall consider measures to protect future right-of-way options within the affected corridors. Likewise, the refinement planning process shall make recommendations for corridor preservation or right-of-way acquisition strategies to ensure that final project recommendations are not precluded by land use decisions within the corridor.

The project development stage determines design details, and a project location or alignment, if necessary, after evaluating engineering and design details, and environmental impacts. While all projects in this plan must follow this process before construction can occur, the following projects must also consider the design elements described in this section:

##### *Banfield (Interstate 84) Corridor*

Despite the relatively heavy investments made in transit and highway capacity in this corridor in the 1980s, further improvements are needed to ensure an acceptable level of access to the central city from Eastside Portland neighborhoods and East Multnomah County. However, physical, environmental and social impacts make highway capacity improvements in this corridor unfeasible. Instead, local and special district plans should consider the following transportation solutions for this corridor:

- mitigate infiltration on adjacent corridors due to congestion along I-84 through a coordinated system of traffic management techniques (ITS)
- improve light rail headways substantially to keep pace with travel demand in the corridor
- improve bus service along adjacent corridors to keep pace with travel demand, including express and non-peak service
- consider additional feeder bus service and park-and-ride capacity along the eastern portion of the light rail corridor to address demand originating from East Multnomah and North Clackamas Counties
- develop TSM strategies for the Gateway regional center to mitigate expected spillover effects on the development of the regional center

### *Northeast Portland Highway*

As radial urban highways such as the Banfield and Interstate-5 are increasingly burdened by peak period congestion, freight mobility will rely more heavily on circumferential routes, including I-205 and Northeast Portland Highway, for access to industrial areas and intermodal facilities. Northeast Portland Highway plays a particularly important role, as it links the Rivergate marine terminals and PDX air terminals to industry across the region (this route includes Killingsworth and Lombard streets from I-205 to MLK Jr. Boulevard, and Columbia Boulevard from MLK Jr. Boulevard to North Burgard). Though Northeast Portland Highway appears to have adequate capacity to serve expected [2020-2025](#) demand, a number of refinements in the corridor are needed. Local and special district plans should consider the following transportation solutions as improvements are made in this corridor:

- improve Northeast Portland Highway as a strategy for addressing Banfield corridor and east Marine Drive congestion
- develop a long-term strategy to serve freight movement between Highway 30 and Rivergate
- implement aggressive access management along Northeast Portland Highway
- implement and refine Columbia Corridor improvements to address full corridor needs of Northeast Portland Highway, from Rivergate to I-205
- consider future grade separation at major intersections
- streamline the Northeast Portland Highway connection from the Lombard/Killingsworth section to Columbia Boulevard with an improved transition point at MLK Jr. Boulevard

- improve the Columbia Boulevard interchange at I-5 to provide full access to Northeast Portland Highway
- construct capacity and intersection improvements between 82nd Avenue and I-205
- Implement the St. Johns Truck Strategy recommendations in order to direct truck traffic onto the designated freight system, as shown in Figure 1.17, and protect the Lombard main street and St. Johns town center from truck traffic impacts.

#### *Interstate-84 to US 26 Connector*

The long-term need to develop a highway link between I-84 and Highway 26 exists, but a series of interim improvements to Hogan Road are adequate to meet projected demand through ~~2020~~2025. The RTP calls for a series of interim improvements that will better connect Hogan Road to both I-84 on the north, and Highway 26 to the south.

These improvements are needed to ensure continued development of the Gresham regional center and expected freight mobility demands of through traffic. They also benefit transit-oriented development along the MAX light rail corridor, as they would move freight traffic from its current route along Burnside, where it conflicts with development of the Rockwood town center and adjacent station communities. In addition to planned improvements to the Hogan Road corridor, local plans or a corridor study should address:

- more aggressive access management between Stark Street and Powell Boulevard on 181st, 207th and 257th avenues
- redesigned intersections improvements on Hogan at Stark, Burnside, Division and Powell to streamline through-flow
- the need for a long-term primary freight route in the corridor
- the potential for a new alignment south of Powell Boulevard to US 26.

#### *Sunrise Corridor*

The full Sunrise Corridor improvement from I-205 to Highway 26 is needed during the 20-year plan period, but should be implemented with a design and phasing that reinforces development of the Damascus town center, and protect rural reserves from urban traffic impacts. This corridor includes rural areas outside the Metro area urban growth boundary. Impacts on rural resources in these areas shall be addressed through statewide planning goal exception findings that expand on findings already adopted in the 2000 RTP, pursuant to Section 660.012.0070 of the state transportation planning rule. Though a draft environmental impact statement has been prepared for this corridor, the final environmental impact statement should be refined to consider the following elements:

- Construct the segment from I-205/Highway 224 interchange to existing Highway 212 at Rock Creek as funds become available
- preserve right-of-way (ROW) from Rock Creek to Highway 26 as funds become available
- consider phasing Sunrise construction as follows: (a) complete I-205 to Rock Creek segment first, followed by (b) ROW acquisition of remaining segments, then (c) construction of 222nd Avenue to Highway 26 segment and (d) lastly, construction of middle segment from Rock Creek to 222nd Avenue as Damascus town center develops
- consider express, peak period pricing and HOV lanes as phases of the Sunrise Corridor are constructed
- reflect planned network of streets in Damascus/Pleasant Valley area in refined interchange locations along the Sunrise Route, including a connection at 172nd Avenue, the proposed major north/south route in the area
- implement bus service in parallel corridor from Damascus to Clackamas regional center via Sunnyside Road
- avoid premature construction that could unintentionally increase urban pressures in rural reserves east of Damascus
- examine the potential for the highway to serve as a "hard edge" in the ultimate urban form of the Damascus area
- develop a concurrent plan to transition the function of the existing Highway 212 facility into a major arterial function, with appropriate access management and intersection treatments identified
- pursue a Green Corridor intergovernmental agreement (IGA) for the Sunrise Corridor from the Damascus town center to US 26, with the specific western terminus for the IGA flexible to future expansion of the urban growth boundary.

#### *I-5 to 99W Connector*

An improved regional connection between Highway 99W and I-5 is needed in the Tualatin area to accommodate regional traffic, and to move it away from the Tualatin, Sherwood and Tigard town centers. The RTP has narrowed the corridor to include two alternatives that depart from I-5 in the same general corridor, but split to form northern and southern alignments relative to the City of Sherwood. Impacts on rural resources in both alignments of this corridor shall be addressed through statewide planning goal exception findings that expand on findings already adopted in the 2000 RTP, pursuant to Section 660.012.0070 of the state transportation planning rule. This connection will also have significant effects on urban form in this rapidly growing area, and the following considerations should be addressed in a corridor plan:

- balance improvement plans with impacts on Tualatin and Sherwood town centers and adjacent rural reserves
- in addition to the northern alignment considered in the Western Bypass Study, examine the benefits of a southern alignment, located along the southern edge of Tualatin and Sherwood, including the accompanying improvements to 99W that would be required with either alignment
- identify parallel capacity improvements to Tualatin-Sherwood Road and 99W in Tigard from I-5 to Highway 217 that could be used to phase in, and eventually complement future highway improvements
- link urban growth boundary expansion in this area to the corridor plan and examine potential the proposed highway to serve as a "hard edge" in the ultimate urban form of the Sherwood area
- develop an access management and connectivity plan for 99W in the Tigard area that balances accessibility needs with physical and economic constraints that limit the ability to expand capacity in this area
- consider express, peak-period pricing and HOV lanes
- pursue a Green Corridor intergovernmental agreement (IGA) for the I-5/99W connector and Highway 99W south of the connector.

#### *Sunset Highway*

Improvements are needed in this corridor to preserve access to and from the central city and the Sunset Corridor employment area, and provide access to Hillsboro regional center. The following elements should be considered as improvements are implemented in this corridor:

- maintain off-peak freight mobility
- phase in capacity improvements from the Sylvan interchange to 185th Avenue, expanding to a total of three general purpose lanes in each direction
- improve light rail service, with substantially increased headways
- construct major interchange improvements at Sylvan, Cedar Hills Boulevard and Cornelius Pass Road
- identify and construction additional overcrossings in the vicinity of interchanges to improve connectivity and travel options for local traffic, thus improving interchange function
- consider express, peak period pricing or HOV lanes when adding highway capacity, especially west of Highway 217

### *Highway 213*

Improvements to this highway link between I-205 and the Willamette Valley should be built in phases, and consider the following:

- continued development of the Oregon City regional center
- interim improvements identified in the 1999 Highway 213 Urban Corridor Study (and included in this plan)
- freight mobility demands
- access needs of Beavercreek urban area, including a re-evaluation of the suitability of Oregon City urban growth boundary expansion in light of transportation constraints
- transit service to areas south of Oregon City.

Though heavy travel demand existing along Macadam/Highway 43, between Lake Oswego and the central city, physical and environmental constraints preclude major roadway expansion. Instead, a long-term strategy for high-capacity transit that links the central city to southwest neighborhoods and Lake Oswego town center is needed. As this service is implemented, the following options should be considered in local and special district plans:

- interim repairs to maintain Willamette Shores Trolley excursion service
- implement frequent bus service from Lake Oswego town center to Portland central city in the Macadam corridor
- phasing of future streetcar commuter service or commuter rail in this corridor to provide a high-capacity travel option during congested commute periods, using either the Willamette Shore Line right-of-way, the Macadam Corridor Design Guidelines (1985) rail alignment or other right-of-way as appropriate.
- implement bicycle safety improvements where appropriate south of the Sellwood Bridge

#### 6.7.7 Areas of Special Concern

Section 660.012.0060 of the state Transportation Planning Rule (TPR) allows local plans to "modify planned function, capacity and performance standards, as needed, to accept greater motor vehicle congestion to promote mixed-use, pedestrian friendly development where multi-modal choices are provided." Facilities in the areas or corridors described in this section are expected to exceed the motor vehicle level of service policy set forth in this plan, and fall under this designation, as they are planned mixed use areas that will have a wide range of transportation alternatives.

However, in each case, the range of transportation solutions needed to address an RTP motor vehicle deficiency represents an unacceptable social, financial or environmental impact, and would be inconsistent with other local, regional and statewide planning goals. Further, each of these areas or corridors represents a relatively localized impact on the overall regional system, and other, alternative travel routes that would continue to conveniently serve regional travel needs. Strategies for managing traffic impacts and providing adequate transportation performance in these areas could include bicycle, pedestrian and transit improvements, demand management programs or changes to land-use plans.

In these areas where motor vehicle performance measures will be exceeded, local TSPs shall adopt one of the following approaches for establishing other transportation performance standards for Areas of Special Concern:

1. Adopt the following performance measures, and provide an analysis that demonstrates progress toward meeting these measures in the local TSP:
  - a. Non-SOV modal targets consistent with Table 1.3 in Chapter 1 of this plan

- b. parking ratios consistent with Title 2 of the Urban Growth Management Functional Plan (UGMFP)
  - c. a street connectivity plan for the Area of Special Concern that meets the connectivity requirements set forth in Section 6.4.5 of this chapter
  - d. a plan for mixed-use development
2. Establish an Area of Special Concern action plan that:
- a. anticipates the growth and subsequent impacts of motor vehicle traffic on multi-modal travel in these areas
  - b. establishes an action plan for mitigating the growth and subsequent impacts of motor vehicle traffic
  - c. establishes performance standards for monitoring and implementing the action plan

The action plan shall consider land-use strategies, as well as transportation solutions for managing the effects of continued traffic growth.

For either strategy, the adopted approach and performance measures shall be incorporated into Appendix 3.6 of the RTP during the next scheduled update. For an Area of Special Concern, adopted performance measures consistent with this section are required at the time of a plan amendment that significantly affects a regional facility, consistent with OAR 660.012.0060.

The following Areas of Special Concern where refinement planning to establish performance measures shall occur as part of the local TSP process, in accordance with this section:

*Highway 99W*

The Highway 99W corridor between Highway 217 and Durham Road is designated as a mixed-used corridor in the 2040 Growth Concept, and connects the Tigard and King City town centers. This route also experiences heavy travel demand. The City of Tigard has already examined a wide range of improvements that would address the strong travel demand in this corridor. The RTP establishes the proposed I-5 to 99W connector as the principal route connecting the Metro region to the 99W corridor outside the region. This emphasis is intended to change in the long term the function of 99W, north of Sherwood, to a major arterial classification, with less need to accommodate longer, through trips.

However, for much of Washington County, Highway 99W will still be a major connection, linking Sherwood and Tigard to the rest of the County and linking the rest of the County to the Highway 99W corridor outside of the region. A number of alternatives for relieving congestion have been tested as part of the RTP update, and by the City of Tigard in earlier planning efforts. These efforts led to the common conclusion the latent travel demand in the Highway 99W corridor is too great to be reasonably offset solely by capacity projects. While the RTP proposed new capacity on 99W between I-5 and Greenburg Road, no specific capacity projects are proposed south of Greenburg Road, due to latent demand and the impacts that a major road expansion would have on existing development. As a result, this section of Highway 99W is not expected to meet the region's motor vehicle level of service policies during mid-day and peak demand periods in the future, and an alternative approach to managing and accommodating traffic in the corridor is needed.

Since statewide, regional and local travel will still need to be accommodated and managed for sometime ODOT, Metro, Washington County and Tigard should cooperatively address the means for transitioning to the future role of the facility to emphasize serving circulation within the local community. This will include factoring in the social, environmental and economic impacts that congestion along this facility will bring. Additionally the analysis should specifically document the schedule for providing the alternatives for accommodating the regional and statewide travel. Similarly the local TSPs should include the agreed upon action plans and benchmarks to ensure the local traffic and access to Highway 99W is managed in a way that is consistent with broader community goals. Additional alternative mode choices should be ensured for Tigard and King City town centers. Tri-Met should be a major participant in the alternative mode analysis. The results of this cooperative approach should be reflected in the local TSPs and the RTP.

In addition, other possible solutions, such as ODOT's new program for local street improvements along highway corridors, may provide alternatives for managing traffic growth on 99W. Finally, the local TSPs should also consider changes to planned land use that would minimize the effects of growing congestion.

*Gateway Regional Center*

Gateway is at a major transportation crossroads, and suffers and benefits from the level of access that results. The Preferred System analysis shows that from the perspective of employers looking at labor markets, the Gateway area is the most accessible place in the Metro region. At the same time, spillover traffic from the Banfield Freeway corridor exceeds the LOS policy established in Table 1.2 on a number of east/west corridors in the Gateway area, including Halsey, Glisan, Burnside, Stark and Division streets.

The local TSP should examine the ability of local streets in these areas to absorb travel demand to a degree that cannot be measured in the regional model. A traffic management plan for these streets should be integrated with the overall TSP strategy, but should establish specific action plans and benchmarks for facilities determined to exceed the LOS policy in the local analysis. Alternative mode choices should be identified to further reduce travel demand. The local

TSP should also consider strategies for providing better access to LRT, including park and ride facilities at station areas.

### *Tualatin Town Center*

Tualatin town center is adjacent to an important industrial area and employment center. New street connections and capacity improvements to streets parallel to 99W and I-5 help improve local circulation and maintain adequate access to the industrial and employment area in Tualatin. However, the analysis of travel demand on regional streets shows that several streets continue to exceed the LOS policy established in Table 1.2, including Hall Boulevard and Boones Ferry Road.

The Tualatin transportation system plan should further evaluate ITS or other system management strategies to further address travel demands and peak-hour expected congestion along Hall Boulevard and Boones Ferry Road entering the town center. In addition, the local TSP should examine the ability of local streets in these areas to absorb travel demand to a degree that cannot be measured in the regional model. A traffic management plan for these streets should be integrated with the overall TSP strategy, but should establish specific action plans and benchmarks for facilities determined to exceed the LOS policy in the local analysis. Alternative mode choices should be identified to further reduce travel demand in addition to placing an emphasis on connectivity, including new development, retrofits and interconnected parking lots in commercial/employment areas. Overall, commuter rail is expected to be an important part of the modal mix of improvements for this part of the region because it offers separate right-of-way for transit service in a corridor that is expected to experience congestion during the morning and evening two-hour peak period. The local TSP should also consider strategies for providing better access to commuter rail.

## **6.8 Outstanding Issues**

The section describes a number of outstanding issues that could not be addressed at the time of adoption of this plan, but should be addressed in future updates to the RTP.

### **6.8.2 ~~Damascus/Boring-Pleasant Valley TCSP Concept Planning~~**

~~Metro was recently awarded a special federal TCSP grant from the US Department of Transportation to complete an urban reserve plan for the Damascus-Pleasant Valley area of Clackamas County. The work scope for the project is broad, encompassing land-use, transportation, and environmental planning. The project is scheduled to begin in early 2000. The objective of the study is to prepare concept plans for this large urban reserve area in anticipation of future urbanization. Metro will work with a number of local partners to complete the project, including the cities of Portland, Gresham and Happy Valley, and Multnomah and Clackamas counties. A citizen policy advisory committee that includes residents and key stakeholders will guide the project.~~

The Damascus-Pleasant Valley planning effort will include conceptual transportation planning for regional facilities in the area, and more detailed street planning for northern portions of the area that are already included in the urban area. Transportation and land use scenarios will be developed to reflect a variety of land use alternatives for the area, and will be analyzed with the regional transportation model.

The preferred alternative will likely include refinements to the Damascus-Pleasant Valley street functional classifications and transportation improvements included in this plan.

Metro received federal grant money for the purpose of completing a concept plan for a new urban area in the Damascus/Boring area. Clackamas County and Metro will jointly develop the concept plan, with the assistance of a Contractor and the participation of area citizens, key organizations, service providers and cities. ODOT will also participate in the process. The concept planning is anticipated to start in winter of 2003, will take approximately two years to complete. There will be extensive public involvement during this process.

The Damascus/Boring Concept Plan will be a cooperative planning effort to create plan and implementation strategies for development of approximately 12,000 acres located south of Gresham and east of Happy Valley in Clackamas County. The concept plan is a follow-up to a December 2002 decision by Metro to bring the area inside the Urban Growth Boundary. The Damascus/Boring Concept plan will be closely coordinated with the environmental analysis of the Sunrise Corridor Unit 1 effort and will address the general need, modes, function, and location of the proposed Sunrise Corridor Unit 2. Important components of the concept plan are expected to include:

- A land-use element that locates a combination of uses and densities that support local and regional housing and employment needs, provides a diverse range of housing, and identifies commercial and industrial employment opportunities that allow residents to work near their home
- A multi-modal transportation system element that serves interstate, regional and community travel needs and informs the Sunrise Corridor Unit 2 planning process
- A natural resources element that identifies natural resource areas and protection strategies
- A public infrastructure and facilities element for water, sewer, storm water, parks, schools, fire and police

The concept plan will provide the basis for future comprehensive plan amendments and development code regulations that must be adopted before development can take place. The Damascus/Boring Concept Plan will identify and evaluate multi-modal transportation system alternatives to serve regional and community needs in the area. The alternatives will include combinations of highway, arterial, boulevard and transit improvements that are complemented by a network of local streets, multi-use trails and bicycle and pedestrian connections. If the Damascus/Boring Concept Plan reaffirms that Sunrise Corridor Unit 2 improvements are needed, the concept plan will identify transportation alternatives to be evaluated through a future DEIS process similar to that already initiated for the Unit 1 portion of the Sunrise Corridor.

Proposed amendments to the RTP would be considered upon completion of the study, which is scheduled to conclude in Fall 2002. The preferred alternative will also include future street plans for some local streets that may be incorporated into local TSPs.

### 6.8.3 Regional Transportation Model Enhancements

#### *Multi-modal Performance Measure Development*

Section 660.012.0060 of the state Transportation Planning Rule allows for the development of alternative measures for evaluating transportation function and efficiency. Though the principal measure in this plan measures motor vehicle performance, future updates to the plan should use a multi-modal measure that better reflects transportation needs and potential solutions. Such measures are already used for Areas of Special Concern identified in Chapter 1 of this plan, but should also be considered in other areas to better evaluate both the need and relative effectiveness of multi-modal transportation solutions.

#### *Tour-Based Modeling and TRO Enhancements*

Tour-based modeling represents a departure from the current trip-based model used to develop the RTP. In contrast to the current model, tour-based modeling allows for a much more detailed analysis, since it does not rely on the somewhat generalized assumptions that accompany the current model. In the current system, land-use and transportation assumptions are created for each of 1,260 traffic zones that form the smallest building block for analysis. Tour-based modeling will allow data to be evaluated to the tax lot or parcel level, which will result in a much more detailed and flexible system for testing proposed transportation improvements.

The recently completed Traffic Relief Options (TRO) project was the first Metro effort to use tour-based modeling. This study tested the effects of congestion pricing on travel in the region, and allows relative pricing costs to be evaluated in terms of the ability to redistribute travel and manage congestion. The tour-based model with TRO enhancements could offer a unique new tool for future RTP updates, as the concepts of congestion pricing and tolling are likely to be considered as major transportation strategies.

#### *Bicycle and Pedestrian Modeling*

The existing regional transportation model probably underestimates bicycle and pedestrian trips, and does not predict bicycle travel according to the transportation network. Instead, the current model predicts bicycle and pedestrian trips as part of the "mode choice" step of the modeling process, but does not assign these trips to a network to predict how they might be distributed. While pedestrian trips are generally short enough to make a network assignment impractical, bicycle trips are of sufficient length to be assigned to a network and evaluated at this level. As part of a future update to the RTP or the Regional Bicycle Plan, Metro will develop a bicycle network modeling process that will improve the region's ability to plan for bicycle travel.

#### *The ODOT Willamette Valley Model*

ODOT has developed a more detailed set of travel zones for the Willamette Valley, which will allow Metro to better predict travel demand at "gateway" points where Willamette Valley traffic enters the region. Currently, the regional model simply projects historic traffic volumes on such routes, but is unable to evaluate how congestion, parallel routes, and distribution of employment in and outside the region affects travel demand at these "gateway" locations. The ODOT Valley

Model has been used in other Metro transportation projects, and should be considered for the next RTP update.

#### **6.8.4 Connectivity Research**

In 1996, Metro completed the Regional Street Design study, a project that resulted in new regional street design classifications in the RTP and connectivity provisions in the UGMFP. The connectivity provisions were based on a series of five case studies of subareas within the Metro region. These areas averaged two square miles in area, and ranged from a very urbanized neighborhood in Portland, to developing areas in Clackamas and Washington counties. For each subarea, conceptual street systems were used to evaluate the benefits of varying levels of street connectivity. The results of this analysis are published in Metro's technical report *Street Connectivity Analysis* (1997).

The connectivity analysis in the 1996 study was limited to motor vehicles, and while the findings from the study are conclusive, the consultant for the project recommended an expanded analysis of one or two of the subareas to confirm the sensitivity analysis included in the original study.

A follow-up study is proposed to confirm the motor vehicle findings of the 1996 study, and expand the analysis to examine the effects of varying levels of connectivity on pedestrian, transit and bicycle travel. This follow-up study could result in proposed changes to existing UGMFP connectivity requirements. This follow-up study is scheduled to be conducted by Metro upon completion of the 2000 RTP update, and recommendations from the study could be considered for adoption in 2001.

#### **6.8.5 Ramp Metering Policy and Implications**

During the 1990s, ODOT has increasingly managed access to the principal arterial system (freeways and highways) with ramp metering. This system of signaled ramp controls allows ODOT to remotely manage traffic flows onto the system to streamline merges and prevent bottlenecks during peak travel periods. Ramp meters provide a low-cost alternative for adding system capacity and enhancing safety. However, as traffic volumes continue to increase on the principal arterial system as well as connecting major and minor arterial routes, the practice of ramp metering will become more complex. Already, local concerns about ramp "storage" capacity forcing backups onto local routes have required ramp expansions in some locations where metering is used.

As part of the next update of the RTP, the policy considerations raised by ramp metering should be addressed. The fundamental principle behind ramp metering is to maintain traffic flows on principal routes as a priority over local arterial routes. However, this assumption should be carefully evaluated on the basis of the performance and reliability requirements of the freeway system in the context of the new land use patterns and street classifications and configurations evolving out of the Region 2040 growth concept.

#### **6.8.6 Green Corridor Implementation**

Green corridors were adopted as part of the 2040 Growth Concept. They are designated in rural areas where state-owned highways connect neighbor cities to the metro area. The purpose of green corridors is to prevent unintended urban development along these often heavily traveled routes, and

maintain the sense of separation that exists between neighbor cities and the Metro region. The green corridor concept calls for a combination of access management and physical improvements to limit the effects of urban travel on the routes on adjacent rural activities.

In several corridors, Metro has already developed inter-governmental agreements (IGAs) with local governments to address access management issues. However, IGAs are not in place in most corridors, and physical improvements, such as street and driveway closures, landscaping and public signage have not been implemented in any green corridors. During the next several years, Metro will continue to work with ODOT and affected local jurisdictions to complete IGAs for the remaining green corridors, and develop plans for necessary improvements. Such improvements should be incorporated into future updates of the RTP.

#### **6.8.7 2040 Land-use and Transportation Evaluation**

Though the RTP contains a number of land-use recommendations, more work is needed to further evaluate RTP and 2040 Growth Concept to determine potential land-use changes that would be beneficial to the transportation system. This evaluation would consider directing growth away from areas that do not have adequate transportation systems, and focusing growth in areas with surplus transportation capacity, as well as improving the balance of jobs and housing to reduce long-distance commuting on the principal arterial system. The evaluation would also include an analysis of the effect of relative wages on the mix of jobs and housing needed to realize transportation benefits.

- *Damascus & Pleasant Valley Urban Reserves:* The overall jobs/housing imbalance in Clackamas County results in heavy travel demand on routes like I-205 and Highway 224 that link Clackamas County to employment areas. A review of the Damascus and Pleasant Valley Urban Reserves should consider the potential for improving jobs/housing balance in these areas. This review should include areas in the Pleasant Valley areas that have been recently incorporated into the urban area, but are largely undeveloped.
- *Beavercreek Urban Reserves:* Urbanization of these reserves would require major improvements to Highway 213 and connecting arterial streets that may be inappropriate in scale and cost, and could negatively impact adjacent areas in Oregon City.

### 6.8.8 Industrial Lands Evaluation

Additional work is needed in Tier 2, 3 and 4 urban reserve lands to determine where strategic transportation improvements could be implemented to make industrial land more viable for development. This evaluation would identify key areas for industrial development where non-transportation actions would enable industrial development that complements the planned transportation system.

### 6.8.9 TDM Program Enhancements

The TDM Subcommittee is in the process of developing a 3-5 year strategic plan that clearly articulates a new vision and proposed direction for the Regional Travel Options program. The strategic direction is to develop a more collaborative marketing program that eliminates duplication of marketing effort and that delivers a clear message to all of our customers (students, commuters, aging population, shoppers, etc). The regional evaluation program will also become more collaborative as we work to develop performance measure and evaluate progress toward non-SOV modal targets for regional centers and industrial areas. The strategic plan will update TDM policies resulting in RTP Amendments that reflect new strategies for promoting travel options to the region.

In addition, the TDM program should be continually updated to include new strategies for regional demand management. One such strategy that should be considered is the Location Efficient Mortgage (LEM). The LEM is a mortgage product that increases the borrowing power of potential homebuyers in "location efficient" neighborhoods. Location efficient neighborhoods are pedestrian friendly areas with easy access to public transit, shopping, employment and schools. The LEM recognizes that families can save money by living in location efficient neighborhoods because the need to travel by car is reduced. Instead of owning two cars, a family living in a location efficient neighborhood could get by with one - or none. The LEM requires bankers to look at the average monthly amount of money that applicants would be spending on transportation if they had to use a car for day-to-day transport and applies it to the servicing of a larger mortgage. This increases the purchasing power of borrowers when buying a home in location efficient neighborhoods, stimulating home purchases in existing urban areas.

### 6.8.10 Transportation Performance Measures

The 2000 RTP marks-marked the first time in the 18-year evolution of the plan that a performance measure other than congestion is adopted as regional policy. The newly incorporated Area of Special Concern designation allows for a broader definition of performance in mixed use centers and corridors, where transportation solutions solely aimed at relieving congestion are inappropriate for functional, physical, financial or environmental reasons.

However, the Area of Special Concern designation is only a first step toward a more broadly defined set of performance measures. Future updates of the RTP should continue to expand the definition of performance to encompass all modes of travel as they relate to planned land uses. While congestion should be factored into a more diverse set of measures, it should be evaluated in a more comprehensive fashion to ensure that transportation solutions identified in future RTP updates represent the best possible approaches to serving the region's travel demand.

### **Section 6.8.11 Transit Stop Planning**

Tri-Met, in cooperation with regional partners, defined most of the major transit stops as a part of the Primary Transit Network planning process in 1997. Planning for the location of transit station continues as Tri-Met and other transit providers participate in specific corridor planning or implements elements of their strategic plan. Amendments to Figure 1.16 will be necessary as these planning efforts continue. As these planning efforts will include participation from the affected local jurisdictions, amendments to their transportation system plans should be made as planning is completed.

As a part of these planning efforts, transit providers may consider policy standards for station spacing for particular types of service lines, amenities to be provided at transit stops and design standards for those amenities. Jurisdictions are also encouraged to undertake transit stop area plans at major transit stops on rapid bus lines, similar to previous planning efforts for light rail stations.

### **6.8.12 Job Access and Reverse Commute**

The Transportation Efficiency Act (TEA-21) of 1998 included the Job Access and Reverse Commute Program to address the mobility challenges facing welfare recipients and low-income persons. This grant program requires States to develop solutions collaboratively with Metropolitan Planning Organizations (MPOs), local and regional transportation agencies and social service providers. The federal Job Access and Reverse Commute Program provides grants to help States and localities develop a coordinated, regional approach to new or expanded transportation services that connect welfare recipients and other low-income persons to jobs and other employment services. Job Access projects support developing new or expanded transportation services such as shuttles, vanpools, new bus routes, guaranteed ride home programs and other transit service expansion for welfare recipients and low-income persons. Reverse Commute projects provide transportation services to suburban employment centers from urban, rural and other suburban locations for all persons.

In response to the federal legislation, the purpose of the Portland Job Access Plan is to connect low-income persons and those receiving Temporary Assistance to Needy Families (TANF) with employment areas and related services in the Portland metropolitan region. The community to be served includes approximately 220,000 people with incomes 150 percent below the poverty level. In 1999, Phase I funding for Portland's Job Access Plan matched existing local resources with federal funds to provide over 87,000 new transit rides for low-income and welfare recipients in Washington, Clackamas and Multnomah counties. The new services improved connections and services to both urban and rural areas of the tri-county area using a combination of public, non-profit and private providers. This has allowed individuals with limited resources to enhance their access to the regional transit network and reduce their transportation burdens. The Regional Job Access Committee represents more than 20 organizations, including Metro, transit providers, social service agencies, child care providers and employers.

Many of today's entry-level positions do not work traditional work hours and the public transportation system is less efficient or non-existent during off-peak shift times. More than 75 employers, representing more than 25,000 employees, have new transportation options for these "hard to serve" shifts from the first year federal Job Access funds. New transportation options range

from carpool incentives to evening or early morning shuttle services which allow low-income job seekers access to otherwise unattainable employment locations.

While job training is a key to job placement, the Portland Job Access Plan recognizes that travel training is a key to job retention. Knowing how to use the available transportation services can ease the commute and provide options for childcare. The plan stresses regional coordination and information access as a key to preparing welfare recipients for their commute.

### **6.8.13 Financial Implementation**

JPACT will convene a committee to address transportation funding issues. This committee will consider the information and concepts addressed in Section 5.4 and report back to JPACT with a funding implementation strategy and an analysis of how the strategy addresses the principles identified in Section 5.4.1. JPACT and its transportation funding committee will work with other government agencies, private sector and non-profit agency efforts to address transportation funding in the state and region as it considers its implementation strategy. This effort will lead to proposals for new sources of transportation revenue to build, operate and maintain the RTP Priority system.

### 6.8.14 RTP Modal Targets Implementation

Metro was recently awarded state Transportation/Growth Management funds to identify best practices and further clarify what constitutes a minimum requirements for local transportation system plans to meet the RTP modal targets. Metro's primary goal is to ensure that the planning programs be adopted, and that on-the-ground progress be demonstrated over time. However, progress toward the non-SOV modal targets is an output of the regional travel demand model, but cannot be generated by local jurisdictions. Progress would be periodically evaluated as part of RTP updates. The project will:

- Identify best practices and minimum requirements for local governments to demonstrate that local TSPs can meet non-SOV mode split targets in the RTP. Meeting this objective will allow Metro to ensure RTP compliance with Section 660-012-0035(5) of the Transportation Planning Rule.
- Ensure that minimum requirements identified are reasonably sufficient to enable local jurisdictions to achieve the Non SOV Modal Targets of Table 1.3 and the Alternative Mode Analysis of section 6.4.6 of the RTP.
- Ensure that minimum requirements identified can be carried out by Metro and/or local jurisdictions without a significant commitment of staff time or other resources.
- Provide education on the benefits of reducing non-SOV mode trips.

This effort could result in amendments to the RTP.

### 6.8.15 Defining System Adequacy

Section 660.012.0060 of the Oregon Transportation Planning Rule (TPR) requires local governments to evaluate amendments to acknowledged plans and regulations to ensure that the changes are consistent with planned transportation improvements. For the Metro region, the RTP defines the "preferred" system of improvements for major transportation facilities as the basis for evaluating such amendments.

However, given that a XX percent funding shortfall between the preferred system and existing revenue projections exists, this methodology can result in plan amendments being justified by transportation improvements that are unlikely to occur in a timely period, due to the current funding shortfall. Under this scenario, a more realistic basis for evaluating the system might be the “financially constrained” system, which represents just XX percent of the larger “preferred” system, and is based on recent funding history. Conversely, using the much more conservative financially constrained system for this analysis risks turning away unanticipated economic development that is consistent with the general intent of a local plan, but requiring greater transportation infrastructure than is provided in the constrained scenario.

Prior to the next update to the 2004 RTP, the issue of defining an adequate system of improvements for the purpose of evaluating local plan amendments should be addressed in detail to ensure a balance between allowing desired development and preventing land use actions that outstrip the public ability to provide transportation infrastructure. This effort should include a cross-section of local and regional interests and state agency officials, and could lead to recommended RTP amendments that implement a new strategy for considering such proposals. The effort should be led jointly by Metro and the Oregon Department of Transportation.

#### 6.8.16 Wilsonville I-5 South Corridor

Based on the results of the *I-5/Wilsonville Freeway Access Study* (DKS Associates, November 2002, prepared for ODOT and the City of Wilsonville, with Metro’s participation), there will be a future deficiency for freeway access capacity in Wilsonville based on year 2020 PM peak forecasts. Improvements were identified in the City of Wilsonville’s *2003 Transportation Systems Plan* to address this deficiency, but did not include the effects of the planned southern alignment for the I-5 to 99W Connector to the Stafford Road Interchange, the plans for which were outside of the scope of the TSP. The improvements include an improved local street system in Wilsonville, freeway access improvements and I-5 operational improvements. Improvements to the local roadway system are not adequate by themselves to mitigate the future 2020 interchange access needs without interchange improvements. In evaluating two freeway access improvement alternatives (an enhanced Wilsonville Road diamond interchange and a new Boeckman Road interchange to I-5) it was found that improvements to the Wilsonville Road interchange would be necessary with either interchange alternative. Based upon the findings of study, an enhanced Wilsonville Road diamond interchange, currently in preliminary engineering, is needed to meet future 2020 capacity demands. Implementation of the enhanced Wilsonville Road diamond interchange project depends upon funding availability.

The analysis of future freeway access needs was conducted with a wide range of travel forecasts, assessing the sensitivity of the findings in the 2020 PM peak period with various travel demand assumptions. In each case, the findings noted above were found to be consistent in terms of the required first step being the enhanced Wilsonville Road diamond interchange. However, utilizing an approximation technique to extend 2020 forecasts to 2030, it was found that in 2030 widening of I-5 to eight lanes would be required to meet interstate freeway capacity standards set by Metro and ODOT and that freeway access capacity would not be adequate with the improved I-5/Wilsonville Road interchange and further access improvements would be necessary. Thus, other freeway access improvements (e.g. a new Boeckman Road interchange) must be considered in future regional capacity studies, including the Regional Transportation Plan update, I-5 South Corridor Study, I-5

to 99W Connector and/or a Stafford/I-205 Study in conjunction with possible urban growth boundary expansions and industrial land evaluations.

**6.8.17 National Highway System (NHS) Routes Update**

A component of the federal requirements that warrants special effort is a needed update to the National Highway System (NHS) designations in the RTP. These routes were originally designated in the early 1990s, and are due for an update that considers 2040 land use and transportation considerations that have since been adopted into regional and local plans. This effort will occur prior to the next RTP update.

2004 RTP UPDATE

# Summary of Recommendations on Public Comments Received

October 31 – December 4, 2003

## Discussion Items

Comment 1: Proceed with adoption of the federal RTP, however, do not adopt a revised RTP that attempts to meet the Transportation Planning Rule and other state planning requirements. Direct Metro TPAC to establish a work program for undertaking a comprehensive update of the RTP. (Washington County, 11/21/03)

TPAC Recommendation: Agree. Recommend adopting a federal RTP only and withdrawing Ordinance 03-1024 at this time. The federal RTP would include an updated set of financially constrained projects and a larger set "illustrative projects" for federal planning purposes. The U.S. Department of Transportation (DOT) and the U.S. Environmental Protection Agency (EPA) approved and acknowledged the 2000 RTP air quality conformity determination on January 26, 2001. Under federal regulations, the RTP must be updated every three years to ensure that the plan adequately addresses future travel needs and is consistent with the federal Clean Air Act. As a result, a new plan demonstrating conformity with the Clean Air Act must be approved and acknowledged by US DOT and US EPA in a formal conformity determination by January 26, 2004, when the 2000 RTP conformity determination expires.

Metro is not required to update the regional transportation plan for state planning purposes until 2007. The next RTP update will begin in 2005, and is proposed to be a more expansive effort that involves broader public discussion of plan policies and projects. The next update will address state and federal planning requirements.

Projects that have been added to the 2004 RTP and that are not included in the 2000 RTP priority system would require compliance with statewide planning goals through a separate amendment to the 2000 RTP priority system prior to construction. The goal would be to complete this amendment process within the next 3 months.

Comment 2: Add the Vancouver Rail Bridge Project to the Financially Constrained System as a priority of the Regional Transportation Plan. The project is to replace the existing "swing span" with a "lift span" and place it closer to the middle of the river. Estimated cost is \$42 million. (Ad-Hoc Steering Committee for the Vancouver Rail Bridge Upgrade Project, 11/26/03)

TPAC Recommendation: The project is not currently eligible for federal funds under the Truman-Hobbs Act. Funding for the project would not come from sources used to forecast the financially constrained Regional Transportation Plan and alternate sources such as Truman Hobbs, lottery or railroad funds cannot be assumed as "reasonably available." Therefore, amend the project into Preferred System only.

Metro Resolution No. 03-3271 identifies this project as a priority project in the region, if eligible to receive Truman Hobbs funding. Truman Hobbs is a federal program that funds projects to address rail hazards to navigation. TPAC recommends that future regional position papers seek amendment to the Truman Hobbs Act to allow analysis of the navigational hazards to account for truck and auto commerce vehicle delay on the I-5 bridge due to the lift span operations caused by the railroad bridge. The rail bridge swing-span is lined up with the lift span on the I-5 bridges making it difficult and hazardous for ships to use the I-5 "high" fixed span section. Using the fixed span section avoids the need for opening the bridge and the resulting delay on I-5.

In addition, the I-5 Trade Corridor Study Environmental Impact Statements (EIS) study will evaluate replacement of the I-5 bridge with drawbridge and "high" fixed span alternatives. If the I-5 EIS process recommends a drawbridge replacement, then the I-5 bridge replacement project should be responsible for replacing the rail bridge swing span. If the I-5 EIS process recommends a "high" fixed span replacement, then replacement of the railroad swing span becomes less of an issue. Although the timing of a "high" fixed span replacement could be an issue and may result in the need to construct an interim improvement for which funding is not identified.

**Comment 3:** How does Metro plan to respond to an increase in expected long-term state revenues due to passage of OTIA 3? (TPAC, 10/31/03)

TPAC Recommendation: Recommend that a post-adoption process be used to identify approximately \$300 million in additional projects to be candidates for inclusion in the financially constrained system, should the revenue forecast increase beyond what is assumed in the 2004 RTP. These projects would be selected using the same methodology as that used to develop the 2004 financially constrained system.

Comment 4: Recommend amending the RTP as defined in Attachment 1 to establish two tiers of industrial areas ("regionally significant" and "local") for the purpose of transportation planning and project funding. This amendment provides clear, immediate prioritization of RSAs for transportation planning and funding decisions, but is also based on proposed Title 4 amendments that are still in development. This amendment will help support efforts to focus future transportation investments to those parts of the region that are most critical to the region's economy and successful implementation of the 2040 Growth Concept. (MTAC, 12/3/03)

TPAC Recommendation: Agree. Amend as requested. This comment has also been forward to MPAC for consideration at the December 10 meeting. Attachment 2 identifies a second option discussed by TPAC.

Comment 5: It is premature to remove the regional freight system designation entirely on McLoughlin Boulevard (99E) between Highway 224 and I-205 south ramps in Oregon City. There are industrial properties throughout the Corridor with the largest being an area near Roethe Road of about 80 acres. The area adjacent to McLoughlin Boulevard is a major destination for freight. It serves everything from industrial to retail including a major auto sales area. McLoughlin Boulevard would be an alternative for traffic including freight when Highway-224 and I-205 is closed or congested due to incidents on this route. The County recommends leaving the designation as is and plan on reviewing the classification as part of the major RTP update that is expected to start within the next year. If a change is necessary, the County recommends that McLoughlin Blvd be down graded to a Road connector. (Clackamas County, 12/3/04)

TPAC Recommendation: Recommend downgrading this segment of McLoughlin Boulevard from a Main Roadway Route to a Road Connector to recognize that this route serves a less important function than a Main Roadway Route. Main roadway routes are intended to connect major activity centers in the region to other areas in Oregon or other states. Road connectors are intended to connect freight facilities or freight generation areas to the Main Roadway Routes. The regional freight system map will be more thoroughly updated in the next RTP update, in order to evaluate potential freight designations from a regional system point of view.

## Consent Items

### PACKET 1 – POLICY UPDATE

Comment 6: Add the Washington Square Regional Center Greenbelt Trail to the Regional Bicycle System Map. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Amend as requested. In addition, TPAC recommends adding this multi-use trail to the Regional Pedestrian System.

Comment 7: Beef Bend, Gaarde and Walnut from Gaarde to Scholls are arterials in the TSP but listed as collectors in the RTP. When Tigard adopted the TSP, it was acknowledged that these discrepancies exist. The RTP should be updated to reflect these classifications. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. These changes are reflected in the October 31, 2003 public comment draft policy update packet.

Comment 8: The street design section has N Ivanhoe (Richmond to Philadelphia) updated to Community Street. This item should be removed from the list of proposed policy amendments because the existing classification is Community Street. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 9: McLoughlin Boulevard - Urban Road termini should change from SE 17<sup>th</sup> – City limits to Woodward – 17<sup>th</sup>. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 10: N Richmond (Lombard to Ivanhoe) should remain a Community Street. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 11: NE Sandy's termini for the Regional Street classification should change from 12<sup>th</sup> – 47<sup>th</sup> to 54<sup>th</sup> – 57<sup>th</sup>. The street design classification should change from Regional Boulevard to Regional Street. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 12: NE Sandy's Regional Boulevard classification termini should change from 47<sup>th</sup> – 82<sup>nd</sup> to 57<sup>th</sup> – 82<sup>nd</sup>. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 13: Sandy Boulevard (98<sup>th</sup> – 122<sup>nd</sup>) is classified as a Regional Boulevard in the 2000 RTP not a Community Boulevard (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

*2004 RTP Update*

*Summary of Recommendations on Public Comments Received: October 31, 2003 – December 4, 2003*

Comment 14: SE 17<sup>th</sup> termini for Community Boulevard should change from Tacoma - Andover to Tacoma – Linn. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 15: NE/SE 39<sup>th</sup> termini for the Regional Street classification should change from Broadway – Powell to Broadway – Holgate. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 16: SE 39<sup>th</sup> termini for Community Street should change from Powell – Woodstock to Holgate –Woodstock. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 17: Add N Greeley Avenue between N Interstate Avenue and N Going Street as a Road Connector on the Regional Freight System map. Portland's TSP identifies Greeley as a Major Truck Street located in a Freight District. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 18: Delete the Gateway Regional Center from section 6.7.7 Areas of Special Concern. Portland's TSP has addressed this area in accordance with the Transportation Planning Rule. Delete or revise Figure 1.13b Gateway Regional Center – Special Area of Concern to reflect its current status. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 19: Update the Regional Motor Vehicle Classification, Regional Street Design and Regional Freight System Maps to reflect classifications recently adopted in the Wilsonville transportation system plan, as follows:

<u>Street Design Classification Map (Figure 1.4)</u>				
<u>Street Name</u>	<u>Location</u>	<u>Current RTP Classification</u>	<u>Proposed RTP Classification</u>	<u>Source of Change</u>
<u>95th Avenue</u>	<u>Boones Ferry Road to Boeckman Road</u>	<u>Not Classified</u>	<u>Collector of Regional Significance</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Boeckman Road to Barber Street</u>	<u>No Road</u>	<u>Planned Collector of Regional Significance</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Barber Street to Wilsonville Road</u>	<u>Not Classified</u>	<u>Collector of Regional Significance</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road</u>	<u>Railroad Tracks to 110th Avenue</u>	<u>No Road</u>	<u>Planned Minor Arterial</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road (old Tooze Road)</u>	<u>110th Avenue to Grahams Ferry Road</u>	<u>Not Classified</u>	<u>Minor Arterial</u>	<u>Wilsonville TSP</u>

<u>Street Design Classification Map (Figure 1.4)</u>				
<u>Street Name</u>	<u>Location</u>	<u>Current RTP Classification</u>	<u>Proposed RTP Classification</u>	<u>Source of Change</u>
<u>95th Avenue</u>	<u>Boones Ferry Road to Boeckman Road</u>	<u>Not Classified</u>	<u>Urban Road</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Boeckman Road to Barber Street</u>	<u>No Road</u>	<u>Planned Urban Road</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Barber Street to Wilsonville Road</u>	<u>Not Classified</u>	<u>Urban Road</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road</u>	<u>Railroad Tracks to 110th Avenue</u>	<u>No Road</u>	<u>Planned Community Street</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road (old Tooze Road)</u>	<u>110th Avenue to Grahams Ferry Road</u>	<u>Not Classified</u>	<u>Community Street</u>	<u>Wilsonville TSP</u>

<u>Regional Freight System Map (Figure 1.17)</u>				
<u>Street Name</u>	<u>Location</u>	<u>Current RTP Classification</u>	<u>Proposed RTP Classification</u>	<u>Source of Change</u>
<u>Boones Ferry Road</u>	<u>Day Street to 95th Avenue</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Elligsen Road</u>	<u>Boones Ferry Road to Parkway Avenue</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>95th Avenue</u>	<u>Boones Ferry Road to Boeckman Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Kinsman Road</u>	<u>Boeckman Road to Barber Street</u>	<u>No Road</u>	<u>Planned Road Connector</u>	<u>Wilsonville TSP</u>
<u>Boeckman Road</u>	<u>95th Avenue to Proposed Kinsman Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>

<u>Kinsman Road</u>	<u>Barber Street to Wilsonville Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Parkway Avenue</u>	<u>Boeckman Road to Town Center Loop W</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Town Center Loop W</u>	<u>Parkway Avenue to Wilsonville Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>
<u>Wilsonville Road</u>	<u>Town Center Loop W to Kinsman Road</u>	<u>Not Classified</u>	<u>Road Connector</u>	<u>Wilsonville TSP</u>

(City of Wilsonville, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 20: Add a Main Roadway designation to the newly completed Highway 47 Bypass in Forest Grove to identify the route's function as a replacement to Tualatin Valley Highway from the Highway 47 bypass to the western Forest Grove city limits. (ODOT, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 21: We are concerned that the current RTP update, in the crunch to meet a constrained timeline, will move the region away from the principles and modal goals set out in the 2000 RTP. Recognizing that the region must move forward with this RTP update in order to meet federal deadlines, CLF and the BTA urge the Council to note that the project mix in this update does not reflect a well-thought-out, well-coordinated strategy to achieve a truly multi-modal transportation system.

Looking forward to the next major RTP update, we urge Metro to start the process in 2004 and set a clear goal of achieving a mode split that looks more like that contained in the 2000 RTP, a document developed with extensive and meaningful public involvement. With virtually no public process and little technical evaluation, the current RTP update with its substantially shifted mode split should be considered an interim document. It should not be the basis of future plans. In addition, CLF and the BTA request a "seat at the table" in both technical and policy arenas to help ensure that the next major RTP update process supports the Region 2040 vision. (Bicycle Transportation Alliance and Coalition for a Livable Future and Lenny Anderson, 12/4/03)

TPAC Recommendation: No change recommended. There are no changes proposed for the mode share target policies in the RTP, though there is a shift toward road capacity projects in the overall breakout of the draft financially constrained system as indicated in the comment. The financially constrained system is also larger, in both total dollars and as a share of the "preferred" system. These changes reflect the OTIA effect on the revenue forecast which has focused primarily on modernization revenues for roads, but also the fact that some big transit capital projects have been completed since the 2000 RTP was adopted (including Central City Streetcar, Airport MAX and Interstate MAX). In addition, light rail to Vancouver was removed from the financially constrained system because of a lack of consensus in Clark County, Wa. to construct this improvement in the 20-year plan period. To this extent, the 2000 RTP had an unusually large amount of transit capital in the constrained system. There are also new local revenues in the forecast, with this revenue more typically directed at road capacity projects. The percentage of bike, pedestrian and boulevard projects also shifted slightly, increasing from 10 percent of the cost of projects in the 2000 RTP to representing 13 percent in the proposed 2004 RTP.

With regard to the request to have a "seat at the table," TPAC and JPACT membership is defined in by-laws. TPAC includes citizen membership opportunities. A decision has not been made whether to have a separate advisory committee for the next RTP update. However, if an advisory committee is formed, the Coalition for a Livable Future will be invited to participate.

Comment 22: Change the current "Road connector" classification on N Philadelphia from N. Lombard to N. Ivanhoe to "No Designation" on the Regional Freight System Map. (ODOT, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

## PACKET 2 – PROJECT UPDATE

Comment 23: Add the Washington Square Regional Center Greenbelt Trail to the RTP preferred and financially constrained systems for \$2 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. This change is reflected in the October 31, 2003 public comment draft project list as Project #6057.

Comment 24: Add the Walnut Street extension project to the RTP preferred and financially constrained systems for \$19 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. This change is reflected in the October 31, 2003 public comment draft project list as Project #6038.

Comment 25: Add Project # 6011 (Highway 217 South Mall overcrossing) to the financially constrained system and identify jurisdiction as Tigard and ODOT. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. These changes are reflected in the October 31, 2003 public comment draft project list.

Comment 26: Delete RTP project #6033 (Walnut Street Improvements, Phase I) and RTP project # 6046 (Walnut Street Improvements, Phase II) from the project list because they have been completed. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. These changes are reflected in the October 31, 2003 public comment draft project list.

Comment 27: RTP project # 6011 is listed on the RTP project list, however it is not identified on the RTP map or in the text of the RTP. Also, this project should be a Tigard jurisdiction as well as ODOT. This is the South Mall to Nimbus Connection identified in the Regional Center Plan. The Washington Square Implementation Plan identifies this project cost at approximately \$26 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Recommend adding to RTP map. Project description changes are reflected in the October 31, 2003 public comment draft project list.

Comment 28: RTP project # 6032 is listed on the RTP project list, however it is not identified on the RTP map or in the text of the RTP. The project description in Tigard's TSP

states: "Realign Hunziker Road to meet Hampton at 72<sup>nd</sup> Avenue – requires overcrossing over ORE 217 - removes existing 72<sup>nd</sup>/Hunziker intersection." The TSP estimates the cost for this improvement at \$10 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Recommend adding to RTP map. Project description changes are reflected in the October 31, 2003 public comment draft project list.

Comment 29: RTP project #6052 should have both Tigard and Beaverton under the jurisdiction as it enters both Cities. The project location is Nimbus Drive to Northern Mall area. The Washington Square Implementation Plan identifies this project cost at approximately \$30 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Recommend adding to RTP map. Project description changes are reflected in the October 31, 2003 public comment draft project list.

Comment 30: RTP project #6053 – the Washington Square Implementation Plan identifies this project cost at approximately \$38 million. (City of Tigard, 10/31/03)

TPAC Recommendation: Agree. Recommend adding to RTP map. Project description changes are reflected in the October 31, 2003 public comment draft project list.

Comment 31: Project #1024 (I-5/McLoughlin Ramps) was not included in ODOT's financially constrained system and should be moved to the Expanded financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was included as part of City of Portland's Financially Constrained System revenue cap.

Comment 32: Move Project #1030 (Ross Island Bridgehead) to the Expanded financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was included as part of City of Portland's Financially Constrained System revenue cap.

**Comment 33:** Move Project #3129 (Glencoe Interchange) to the Expanded financially constrained system, if appropriate to be included in RTP at all, for air quality conformity. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was removed from the RTP project list altogether because it is located outside Metro's Planning Area Boundary. It will be modeled for air quality conformity.

Comment 34: Move Project# 5135 (McLoughlin Boulevard improvements from I-205 to 10th Avenue) to the Expanded financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was included as part of Clackamas County's Financially Constrained System revenue cap and received funding from the MTIP.

**Comment 35:** Add I-5/99W Connector Ph. 1 Arterial Connection to financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: No change recommended. This project was included in the financially constrained system as Project #6141.

**Comment 36:** Add new Highway 217 project to construct braided southbound on-ramp from Beaverton-Hillsdale Highway and southbound off-ramp to Allen Boulevard. Add this project to the Expanded financially constrained system. (ODOT, 11/6/03)

TPAC Recommendation: This project is part of RTP Project #3023 which is in the preferred system only. Recommend including the project on an expanded financially constrained system that will be developed as a post-adoption activity.

Comment 37: Update the project names for the streetcar projects as follows:

- #1015 - Portland Streetcar - Phase 3a (River Place)
- #1086 - Portland Streetcar - Phase 3b (Gibbs)
- #1087 - Portland Streetcar - Phase 3c (Bancroft)
- #1106 - Portland Streetcar - Eastside, Phase 1 (Lloyd District)
- #1107 - Portland Streetcar - Eastside, Phase 2 (CEID)

(City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 38: Project #1199 - Barbur Boulevard Pedestrian Access to Transit Improvements should be moved to the Preferred System. The I-5/Barbur Corridor Study will precede improvements in this corridor. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 39: Project #2016 – NE Halsey Bikeway should be moved to the Preferred System. Due to right-of-way constraints, the project needs additional study to determine feasibility. The Tillamook Bike Boulevard provides an alternative route through this section of northeast Portland. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 40: Project #4015 – US-30 Bypass Improvements Study should be combined with #4037. Delete #4015. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 41: Project #4030 – NE 11-13<sup>th</sup> Avenue Connector should be combined with #4037. Delete Project #4030. (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 42: Project #4037 – Columbia and Lombard Intersection Improvements should be updated as follows:

- Name: Lombard – Columbia Connection near MLK Jr. Boulevard
- Description: Improve road connection between Columbia Boulevard and Lombard in the vicinity of MLK Jr. Boulevard to 11<sup>th</sup>/13<sup>th</sup>, to facilitate freight movement.
- Estimated Cost: \$16, 835,000

- Jurisdiction: Portland/Port
  - RTP Program Years: 2004 – 2009
- (City of Portland, 11/12/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 43: Add back project #1106 to conduct a feasibility study of streetcar service in inner eastside Portland neighborhoods. (City of Portland, 11/17/03)

TPAC Recommendation: Agree. Amend as requested. This project was inadvertently replaced by a new project to construct phase 1 of the eastside streetcar between the Pearl district and the Lloyd district.

Comment 44: Project # 3099 (1<sup>st</sup> Avenue/Glencoe Road widening): Change program years from 2010-15 to 2004-09. (City of Hillsboro, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 45: Project #3118 (TV Highway/Brookwood Avenue intersection alignment): Change program years from 2010-15 to 2004-09. (City of Hillsboro, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 46: Project #3117 (Grant Street East-West connector/extension to Brookwood Pkwy): Change program years from 2010-15 to 2004-09. (City of Hillsboro, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 47: Project # 3139 (US 26 over crossing at 229<sup>th</sup> Avenue): Change program years from 2010-15 to 2004-09. (City of Hillsboro, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 48: Project #1185 – Change program years to 2004-09 to reflect scheduled project completion under MSTIP3 in 2004/05. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 49: Project #3011 – Change project description to read Cornell to 185<sup>th</sup> to be consistent with #3009. (ODOT, 11/6/03 and Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 50: Project #3036 – Change cost estimate to \$12.7 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 51: Project #3066 and #3067 - Change 2040 link from Beaverton Corridor to Bethany TC. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 52: Project #3069 – Change location to Allen to Beaverton-Hillsdale Hwy. and cost estimate to \$13.3 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 53: Project #3099 – Change jurisdiction to Washington County because road is planned to remain part of Countywide Road System (i.e., is and will be under County's roadway jurisdiction) and change cost estimate to \$14.8 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 54: Project #3103 – Change project location to 185<sup>th</sup> to Brookwood and cost estimate to \$34.8 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 55: Project #3115 – Change jurisdiction to Wash. Co. to reflect current roadway jurisdictional responsibility. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 56: Project #3133 – Change project description to read "Construct eastbound on-ramp, westbound off-ramp and southbound auxiliary lane" to reflect anticipated improvements already funded under OTIA. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 57: Project #3137 – Change cost estimate to \$12.5 million to reflect County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 58: Project #3142 – Change project location to read "170<sup>th</sup> to Cornelius Pass" with an estimated cost of \$21 million and program year of 2010-15. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 59: Project #3149 – Change project description to read "Relocate westbound on-ramp to construct westbound to southbound loop ramp and widen overcrossing to accommodate additional southbound through-lane". (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 60: Project #3174 – Change project location to “Leahy to 84<sup>th</sup> Ave.” and project description to “widen to 5 lanes...” to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 61: Project #3176 – Change project name to 95<sup>th</sup> Avenue Extension. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 62: Project #3180 – Change project description to read “Construct new collector with sidewalks and bike lanes.” (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 63: Project #3186 – Change project location to read “US 26 to Cornell Road” to be consistent with new proposed MSTIP project. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 64: Project #3188 – Change project location to read “Cornell Road to Laidlaw Road” to be consistent with new proposed MSTIP project. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 65: Project #3199 – For consistency with County Transportation Plan, change project location to read “143<sup>rd</sup> Avenue to future Springville Extension” and change cost estimate to \$21.3 million. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 66: Project #3202 – For consistency with County Transportation Plan, change project location to read “Future Springville Extension to Cornelius Pass” and include cost estimate of \$12.4 million. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 67: Project #3209 – Change 2040 link from Tanasbourne TC to Bethany TC. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 68: Project #3214 – Delete phrase “complete boulevard design improvements” from project description because project is not designated for boulevard design considerations in County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 69: Project #3215 – Change cost estimate to \$15.4 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 70: Project #6030 – Change cost estimate to \$41.6 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 71: Project #6043 – Change cost estimate to \$8.2 million to be consistent with County Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 72: Add new project to Preferred System to widen 209th from Kinnaman to Farmington Road for \$21 million in the 2010-2015 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 73: Add new project to Preferred System to widen 174th from Bronson Road to Meadowgrass Road to 3 lanes with bike lanes and sidewalks for \$13.9 million in the 2016-25 time period. This project is the continuation of RTP project #3205 the 173<sup>rd</sup>/174<sup>th</sup> undercrossing of Hwy. 26. This route is also designated as an arterial road in both the 2000 RTP and the County's Transportation Plan. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 74: Add new project to Preferred System to widen Springville Road from 185<sup>th</sup> to Portland Community College access to 5 lanes for \$3.8 million in the 2010-15 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 75: Add new project to Preferred System to widen Springville Road from PCC access to Kaiser Road to 3 lanes @ \$9.6 million in the 2016-25 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 76: Add new project to Preferred System to widen Laidlaw Road from West Union Road to Kaiser Road to 3 lanes @ \$11 million in the 2010-15 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 77: Add new project to Preferred System to widen Kaiser Road from Bethany Boulevard to Cornell Road to 3 lanes @ \$18.6 million in the 2010-15 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 78: Add new project to Preferred System to widen Kaiser Road from Springville to Bethany Boulevard to 5 lanes @ \$4.6 million in the 2016-25 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 79: Add new project to Preferred System to widen Jenkins Road from Murray Boulevard to 158th Avenue to five lanes @ \$7.3 million in the 2010-15 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 80: Add new project to Preferred System to widen 197<sup>th</sup>/198<sup>th</sup> from Tualatin Valley Highway to Baseline Road to 3 lanes @\$13.9 million in the 2016-25 time period. This is identified as a collector of regional significance in the 2000 RTP and is included in the County's Transportation Plan project list. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 81: Add new project to Preferred System "Cornelius Pass Interchange Improvement @ Hwy. 26 to add northbound to westbound loop ramp". Estimated cost is \$30 million and program year is 2016-25. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 82: Add new project to Preferred System to widen Barnes Road from Leahy to County Line to 3 lanes for \$7.5 million in 2016-25 time period. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 83: Project #3024 – Delete project on US 26 from Cornell Road to 185<sup>th</sup> Avenue, which duplicates revised #3011. (ODOT, 11/6/03 and Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 84: Project #3043 – Delete seven-lane project on Walker Road from Cedar Hills to Murray because need shown in Washington County Transportation Plan is only five lanes. (Washington County, 11/20/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 85: Remove project #6091, the Boeckman Road I-5 Overcrossing, from the financially constrained list and move it to the preferred system. (City of Wilsonville, 11/21/03 and 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 86: Add project #6093, the Barber Street extension, to the financially constrained list. The Barber Street Extension project was determined to be a higher priority

project because of its ability to have a greater impact on providing relief to the Wilsonville Road Interchange. (City of Wilsonville, 11/21/03 and 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 87: Add the Tillamook Branch Trestle project to the RTP. The project provides an important east-west multi-use trail connection across the Willamette River between Lake Oswego and Milwaukie. (Clackamas County Board of Commissioners, 11/21/03, and City of Lake Oswego, 11/24/03)

TPAC Recommendation: Agree. This bridge currently serves freight rail and has been identified as a possible future commuter rail connection. Amend project into the Preferred and Financially Constrained systems as a feasibility study to evaluate a bicycle and pedestrian component.

Comment 88: Revise description of Project #3013 to include construction of multi-use trail. (Tualatin Hills Parks and Recreation District, 11/24/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 89: Revise description of Project #3015 to include construction of multi-use trail. (Tualatin Hills Parks and Recreation District, 11/24/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 90: Add back a project to widen I-205 SB on-ramp at Airport Way for \$10 million (preferred system) in 2016-2025 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested. This project (#2070 in the 2000 RTP) was inadvertently replaced by the new project #2070, which is also needed in the 2004-09 time period.

Comment 91: Delete project #4019. There is no plan for another LRT station in PIC or for realigning track there. New Project #4060 is the correct LRT realignment project - to occur with future PDX terminal expansion east. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 92: Move Project #4029 to 2004-09 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 93: Revise 2040 location of Project #4030. This project is located in the Columbia Corridor, not PDX IA. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 94: Update Project #4038 cost to \$790,000. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 95: Move Project #4045 to 2004-09 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 96: Move Project #4060 to 2010-15 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 97: Update Project #4085 cost to \$350,000. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 98: Move Project #4086 to 2004-09 time period. (Port of Portland, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 99: Add Project #1022 Sullivan's Gulch / Banfield Trail Feasibility Study (Regional Trail #37) to the financially constrained system at a cost of \$150,000. **This trail which would be on the north side of the freeway would connect the Eastbank Esplanade Trail to the I-205 Bike and Pedestrian Trail. The trail would connect the Central City, Lloyd District Regional Center, Hollywood Town Center and Gateway Regional Center.** (Metro Regional Parks and Greenspaces Department, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 100: Add preliminary engineering and design portion of Project #5052 17th Avenue Trolley Trail Connector (Regional Trail #30) to the financially constrained system at a cost of \$200,000. The project will connect the Springwater Corridor and Three Bridges project to the Milwaukie Town Center and Trolley Trail. The proposed project is within one-mile of downtown Milwaukie. (Metro Regional Parks and Greenspaces Department, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 101: Add the feasibility study portion of Project #5207 Mt. Scott Creek Trail (Regional Trail #48) to the financially constrained system at a cost of \$767,000. This project includes a feasibility study and the cost of trail design and construction, including an under-crossing for the trail at S.E. Sunnyside Road. (Metro Regional Parks and Greenspaces Department, 11/25/03 and City of Happy Valley, 12/4/03)

TPAC Recommendation: Add the feasibility study to the financially constrained system and consider adding the remaining portion of the project to the financially constrained system in future RTP updates to reflect feasibility study recommendations.

Comment 102: Add the feasibility study portion of Project #5095 Phillips Creek Trail (Regional Trail #32) to the financially constrained system at a cost of \$100,000. This trail includes a trail loop around Clackamas Regional Center, connecting to I-205 Bike / Pedestrian Trail and the North Clackamas Greenway Trail, following Phillips Creek. (Metro Regional Parks and Greenspaces Department, 11/25/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 103: Add the feasibility study portion of Project #4076 Columbia Slough Trail (Regional Trail #45) to the financially constrained system at a cost of \$150,000. This trail would connect Kelley Point Park east to Blue Lake Regional Park. Implementation costs to be estimated following the completion of the study. (Metro Regional Parks and Greenspaces Department, 11/25/03 and Columbia Slough Watershed, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 104: Add a new study to evaluate a new west side arterial bridge over the Columbia River between the Ports of Vancouver and Portland to serve freight movement. The current I-5 Partnership recommendation to widen the existing I-5 bridge is not adequate to address traffic congestion in the I-5 corridor. (North Portland Neighborhood Association, 11/3/03 and Hayden Island Neighborhood Network, 11/26/03)

TPAC Recommendation: No change recommended. This option was already examined in the I-5 Trade Corridor Study and deferred to be addressed as part of the I-5 Environmental Impact Statement (EIS) Study (Project # 4009). The I-5 Transportation and Trade Partnership Strategic Plan directs the EIS study to evaluate whether or not a six-lane freeway plus two 2-lane arterials (one in the vicinity of the I-5 corridor and one in the vicinity of the railroad bridge) is a viable alternative for consideration in the EIS.

Comment 105: Reduce Project #2047 (Division Boulevard) project limits to be Kelly Street to Burnside Street and cost estimate to be \$3.5 million as requested in the **East Multnomah County submittal of October 20**. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 106: Reduce Project #2027 (Civic Neighborhood LRT Station/Plaza) cost estimate to be \$3.5 million. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 107: Update Project #2014 (Glisan Street Bikeway) project limits to be 162nd Avenue to 202nd Avenue and reduce cost estimate to be \$200,000. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 108: Reduce Project #2057 (Gresham RC Pedestrian Improvements) cost estimate to \$5 million. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 109: Add a new project to construct a MAX Path from Ruby Junction to Cleveland Station for \$2 million in the Preferred and Financially Constrained Systems. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 110: Add Project #2048 (Burnside **Boulevard** - Wallula to Hogan) to the Financially Constrained System. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 111: Update Project #2028 (Powell Boulevard) cost estimate to reflect \$7 million of local funds and \$5.25 million of OTIA funds. (ODOT, 11/6/03 and City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 112: Delete Project #2049 (Powell Boulevard) as this project is included in Project #2028. (City of Gresham, 12/1/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 113: Add a new project to the Financially Constrained System called Lombard/St.\_Louis/Ivanhoe Multimodal Improvements from St Louis to Philadelphia. The project will implement signal and pedestrian crossing improvements to improve pedestrian safety and freight flow. The estimated cost is \$1.1 million and time period is 2004-09. This project implements a portion of the St Johns pedestrian district improvements (#1150). This phase was selected for MTIP funding and should be identified as a stand-alone project in the RTP. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 114: Add Project # 1095 (Union Station Multi-modal Center Study) to Financially Constrained System and update cost estimate to \$300,000. This project is a priority for the City of Portland; it was submitted in the most recent MTIP process and likely to be resubmitted for MTIP funding in the future. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 115: Add Project #1173 (Hillsdale TC Pedestrian Improvements) to the financially constrained system in the 2010-15 time period. This project constructs pedestrian and street network improvements for a Town Center warrant inclusion in the Financially Constrained System. This project is identified in the Portland TSP as a mid-term timeframe. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 116: Add Project #1096 (Barbur/I-5 Corridor Study) to the financially constrained system in the 2004-09 time period. This study is part of the Metro Corridor Initiatives Planning Program and its completion and recommendations will provide improved project definitions for several RTP projects in the vicinity of the Barbur Boulevard/I-5 Corridor. This project is identified in the Refinement Plans and Studies Chapter of the Portland TSP and the Regional Transportation Plan. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 117: Add a new project for the Capitol Hwy/Vermont/30<sup>th</sup> Ave. Intersection to the preferred and financially constrained systems for \$450,000 in the

2010-15 time period. This project will provide traffic safety and pedestrian and bicycle facility improvements at this intersection and approaching street segments. This project is identified as part of the Capitol Highway Plan adopted by City Council. It was not built as part of the initial street project improvements due to budget limitations. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 118: Add a new project for Capitol Highway between Sunset and Barbur to the preferred system for \$910,000 in the 2010-2015 time period. This project will provide pedestrian and bicycle facility improvements. This project is identified as part of the Capitol Highway Plan adopted by City Council. Portions of this project segment are rated as higher priority improvements. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe. (City of Portland, 12/3/03 and Glenn Bridger, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 119: Add a new project called SW Capitol Highway – Marquam Segment between Huber and Stephenson to the Preferred System. The project will provide improved pedestrian crossings and median design treatments. Estimated Cost: \$750,000 and Program Year: 2016-2026. This project is identified as part of the Capitol Highway Plan adopted by City Council. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe. (City of Portland, 12/3/03 and Glenn Bridger, 12/4/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 120: Delete Project #2024 (Gateway RC Pedestrian District Improvements – Phase III) from the financially constrained system, but retain in Preferred System. Retain all other current project information. This is the last of a three phase implementation schedule of local street network development in the regional center. The first and second phase of this project should remain as is in the Financially Constrained System. (City of Portland, 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 121: The recently identified safety improvements (guardrails) to Boones Ferry Road and Arnold Street in southwest Portland should be added to the Portland TSP and Regional Transportation Plan. (Southwest Neighborhoods, Inc., 12/3/03)

TPAC Recommendation: No change recommended. This comment will be forwarded to the City of Portland for consideration.

Comment 122: Move Project # 1176 and #1177 to the 2004-09 time period. (Southwest Neighborhoods, Inc., 12/3/03)

TPAC Recommendation: Agree. Amend as requested.

Comment 123: The description for Project # 1181 (Beaverton-Hillsdale Highway ITS) should be clarified to identify that it includes portions of Capitol Highway. The project should

also be expanded to include upgrading the street to fill in missing sidewalks and constructing street crossing improvements. Project #1184 is also very important. (Southwest Neighborhoods, Inc., 12/3/03 and Glenn Bridger, 12/4/03)

TPAC Recommendation: No change recommended. Project #1181 is to implement system management strategies to help traffic flow more efficiently in this corridor with signal timing and other measures. A separate project, Project #1176, has been identified for this corridor to address bicycle, pedestrian and access to transit needs, and is included in the financially constrained system. Phase 1 of Project #1184 has been included in the financially constrained system, which involves realigning Oleson Road to provide a direct connection to Beaverton-Hillsdale Highway and Scholls Ferry Road.

Comment 124: Add Project #1004, #1031, #1195 and #1196 to the financially constrained system. These are critical projects for moving traffic through southwest Portland in the Barbur/I-5 south Corridor. (Southwest Neighborhoods, Inc., 12/3/03 and Don Baack, Hillsdale Neighborhood Association, 12/4/03)

TPAC Recommendation: No change recommended. The four projects represent approximately \$134 million. While these projects are important improvements to serve this part of the region, the revenue forecast is not adequate to include these projects in the financially constrained system at this time.

Comment 125: Add a new project to reconstruct the Barbur Boulevard structures over Vermont Street and Newberry Street near Capital Highway/Barbur Boulevard Intersection. These structures had emergency repairs five years ago that were expected to last 10 years. (Southwest Neighborhoods, Inc., 12/3/03 and Don Baack, Hillsdale Neighborhood Association, 12/4/03)

TPAC Recommendation: No change recommended. This comment will be forwarded to the Oregon Department of Transportation.

Comment 126: Place the entire Wilsonville Road Interchange project within the Financially Constrained list, not just the PE and ROW with construction on the Preferred List. This is important because this project has been identified as a high priority project both by the City and by ODOT, as well as regional and federal partners who participated in ODOT's 2002 Freeway Access Study. The critical nature of this project is evidenced by the City of Wilsonville's commitment of \$3.5 million in the city's current budget to begin Phase 1 of the needed improvements. (City of Wilsonville, 12/4/03)

TPAC Recommendation: No change recommended. Preliminary engineering and right-of-way acquisition were identified by ODOT as priorities for inclusion in the financially constrained system. Given limited revenues assumed for the 20-year plan period, construction was not included at this time.

Comment 127: US 26 needs to be expanded to six lanes from Highway 217 to Cornelius Pass road. This improvement will support Oregon's economic recovery and increase the region's ability to move goods, services and people. The new lanes could be designed for high occupancy vehicles or for truck traffic only. (Tim Phillips, 12/4/03)

TPAC Recommendation: Agree. No change recommended. The October 31, 2003 draft RTP project list includes projects to widen US 26 to six lanes from Highway 217 to 185th

and interchange improvements at Cornelius Pass Road. These improvements are included in Projects #3008, #3009, #3011, and are in the financially constrained system. Project #3005 is a refinement study to complete planning for improvements in the corridor.

Comment 128: Transportation problems in the OHSU area needed to have a regional solution. In addition, it is important to have more time to comment on the proposed amendments; the City of Portland had submitted proposed amendments late so that there was little time to comment on them. He recommended Metro send a clear signal that this Council supports public comment. (David Rutledge, 12/4/03)

TPAC Recommendation: Agree. The public comment period on the 2004 RTP has been extended until 5 p.m. December 10 to allow more opportunity for public comment on recently recommended amendments.

Comment 129: The RTP does not adequately address transportation needs in the southwest Portland area. The OHSU Tram and improvements to US 26 serve this area, but do not reflect the true needs of the neighborhood. The \$15 million included in the RTP for Tram could be better used to address other, more important needs in the area. (Dr. Pamela Settlegood, President Southwest Hills Residential League, 12/4/03)

TPAC Recommendation: No change recommended. Metro funding has not been specifically targeted to the Tram. The funding assumptions include a mix of primarily local and private sources, including urban renewal funds, traffic impact fees and other sources. Metro recently allocated \$10 million to the City of Portland through the 2004-07 MTIP for use for North Macadam infrastructure improvements. To date Portland has indicated that this money is likely to be used to improve the street network, however, this has not been determined.

## PACKET 3 – TECHNICAL UPDATE

See Comment # 1 under the discussion items section.

## PACKET 4 – AIR QUALITY CONFORMITY DETERMINATION

Comment 130: Update Appendix 4 – Transportation Analysis Zone Assumptions (TAZs), to identify Wilsonville as a Tier 1 or Tier 2 Industrial Area. (City of Wilsonville, 11/21/03 and 12/4/03)

TPAC Recommendation: Agree. Recommend listing Wilsonville under the Tier 2 industrial areas assumptions as this 2040 designation better reflects the characteristics of the industrial lands in this area, particularly with regard to having a developing street system.

## CHAPTER 1

# Regional Transportation Policy

## 1.2 Connecting Land Use and Transportation

While the 2040 Growth Concept is primarily a land use planning strategy, the success of the concept, in large part, hinges on implementation of regional transportation policies identified in this plan. The following are descriptions of each of the 2040 Growth Concept land-use components and the transportation system envisioned to serve them. The 2040 Growth Concept land-use components, called 2040 Design Types, are grouped into a hierarchy based on investment priority. Table 1.1 lists each 2040 Design Type, based on this hierarchy. Figure 1.0 shows the adopted Region 2040 Growth Concept Map.

**Table 1.1**  
**Hierarchy of 2040 Design Types**

Primary land-use components	Secondary land-use components
Central city	<a href="#">Local industrial areas</a>
Regional centers	Station communities
<a href="#">Regionally significant industrial areas</a>	Town centers
Intermodal facilities	Main streets
	Corridors
Other urban land-use components	Land-use components outside of the urban area
Employment areas	Urban reserves
Inner neighborhoods	Rural reserves
Outer neighborhoods	Neighboring cities
	Green corridors

Source: Metro

### 1.2.1 Primary Components

The central city, regional centers, [regionally significant industrial areas](#) and intermodal facilities are centerpieces of the 2040 Growth Concept, and form the geographic framework for more locally oriented components of the plan. Implementation of the overall growth concept is largely dependent on the success of these primary components. For this reason, these components are the primary focus of 2040 Growth Concept implementation policies and most infrastructure investments.

#### Central city and regional centers

Portland's central city already forms the hub of the regional economy. Regional centers in suburban locales such as Gresham, Beaverton and Hillsboro are envisioned in the 2040 Growth Concept as complementary centers of regional economic activity. These areas have the region's highest development densities, the most diverse mix of land uses and the greatest concentration of commerce, offices and cultural amenities. They are the most accessible areas in the region by both auto and public transportation, and have very pedestrian-oriented streets.

In the 2040 Growth Concept, the central city is highly accessible by a high-quality public transportation system, multi-modal street network and a regional freeway system of through-routes. Light rail lines

radiate from the central city, connecting to each regional center. The street system within the central city is designed to encourage public transportation, bicycle and pedestrian travel, but also accommodate auto and freight movement. Of special importance are the bridges that connect the east and west sides of the central city, and serve as critical links in the regional transportation system.

Regional centers also feature a high-quality radial transit system serving their individual trade areas and connecting to other centers, as well as light rail connections to the central city. In addition, a fully improved network of multi-modal streets tie regional centers to surrounding neighborhoods and nearby town centers, while regional through-routes will be designed to connect regional centers with one another and to points outside the region. The street design within regional centers encourages public transportation, bicycle and pedestrian travel while also accommodating automobile and freight movement.

### **Regionally significant Industrial areas and intermodal facilities**

**Regionally significant** Industrial areas serve as “sanctuaries” for long-term industrial activity. A network of major street connections to both the regional freeway system and intermodal facilities primarily serves these areas. Many industrial areas are also served by freight rail, and have good access to intermodal facilities. Freight intermodal facilities, including air and marine terminals, freight rail yards and common carrier truck terminals are areas of regional concern. Access to these areas is centered on rail, the regional freeway system, public transportation, bikeways and key roadway connections.

While industrial activities often benefit from roadway improvements largely aimed at auto travel, there are roadway needs unique to freight movement that are critical to the continued vitality of industrial areas and intermodal facilities.

### **1.2.2 Secondary components**

While more locally oriented than the primary components of the 2040 Growth Concept, town centers, station communities, main streets and corridors are significant areas of urban activity. Because of their density and pedestrian-oriented design, they play a key role in promoting public transportation, bicycling and walking as viable travel alternatives to the automobile, as well as conveniently close services from surrounding neighborhoods. As such, these secondary components are an important part of the region’s strategy for achieving state goals to limit reliance on any one mode of travel and increase walking, bicycling, carpooling, vanpooling and use of transit.

#### **Station communities**

Station communities are located along light rail corridors and feature a high-quality pedestrian and bicycle environment. These communities are designed around the transportation system to best benefit from the public infrastructure. While they include some local services and employment, they are mostly residential developments that are oriented toward the central city, regional centers and other areas that can be accessed by rail for most services and employment.

### **Town centers and main streets**

Town centers function as local activity areas that provide close access to a full range of local retail and service offerings within a few miles of most residents. While town centers will not compete with regional centers in scale or economic diversity, they will offer some specialty attractions of regional interest. Although the character of these centers varies greatly, each will function as strong business and civic communities with excellent multi-modal arterial street access and high-quality public transportation with strong connections to regional centers and other major destinations. Main streets feature mixed-use storefront style development that serves the same urban function as town centers, but are located in a linear pattern along a limited number of bus corridors. Main streets feature street designs that emphasize pedestrian, public transportation and bicycle travel.

### **Local industrial areas**

Local industrial areas serve as important centers of local employment and industrial activities. A network of major street connections to both the regional freeway system and intermodal facilities generally serves these areas. Access to these areas is centered on rail, the regional freeway system, public transportation, bikeways and key roadway connections.

While local industrial activities often benefit from roadway improvements largely aimed at auto travel, there are roadway needs unique to freight movement that are critical to the continued vitality of these areas.

### **Corridors**

Corridors will not be as intensively planned as station communities, but similarly emphasize a high-quality bicycle and pedestrian environment and convenient access to public transportation. Transportation improvements in corridors will focus on nodes of activity – often at major street intersections – where transit and pedestrian improvements are especially important. Corridors can include auto-oriented land uses between nodes of activity, but such uses are carefully planned to preserve the pedestrian orientation and scale of the overall corridor design.

## CHAPTER 6

# Implementation

### 6.8 Outstanding Issues

#### **6.8.X Regionally Significant Transportation Areas**

In 2003, the region determined a need to protect economic development opportunities by ensuring a long-term supply of large industrial sites for future employment. To meet this need, Metro proposed limits on the types and scale of non-industrial activities in industrial areas. A new industrial design type called Regionally Significant Industrial Areas (RSIA) was proposed as a mechanism for enacting these provisions.

As part of this proposal, private investment in areas with the RSIA designation could be encouraged through complementary public investments, such as transportation and other infrastructure improvements. The Regional Transportation Plan (RTP) already includes many projects and programs needed to meet this objective, but does not distinguish between the existing industrial designation, and the new RSIA designation, which represents a subset of the larger industrial land base.

To better support the increased emphasis on transportation investments in RSIA's, the 2006-09 Metro Transportation Improvement Program (MTIP) should include new criteria that places greater emphasis on projects that serve these areas, and result in increased regional and local transportation investments that serve RSIA's. The scheduled 2005-06 update to the RTP should also consider amendments to Chapter 1 policies that govern investment priorities for RSIA's.

### Excerpt from December 4, 2003 Metro Council Public Hearing

6.3 **Ordinance No. 03-1024**, For the Purpose of Adopting the 2004 Regional Transportation Plan as the Regional Transportation System Plan and the Regional Functional Plan for Transportation to Meet State Planning Requirements.

6.4 **Resolution No. 03-3380**, For the Purpose of Adopting the 2004 Regional Transportation Plan as the Federal Metropolitan Transportation to meet Federal Planning Requirements.

6.5 **Resolution No. 03-3381**, For the Purpose of Adopting the 2004-07 Metropolitan Transportation Improvement Program.

6.6 **Resolution No. 03-3382**, For the Purpose of Adopting the Portland Area Air Quality Conformity Determination for the 2004 Regional Transportation Plan and 2004-07 Metropolitan Transportation Improvement Program.

Motion:	Councilor Park moved to adopt Ordinance No. 03-1024, Resolution Nos. 03-3380, 03-3381 and 03-3382.
Seconded:	Councilor Burkholder seconded the motion

Councilor Park said there had been a variety of issues that had arisen dealing with our local partners. Mr. Cotugno would explain what we were attempting to do and with concurrence of both the Council and Joint Policy Advisory Committee on Transportation bifurcating the process of the federal and state Regional Transportation Plan (RTP) update.

Andy Cotugno, Planning Director, introduced the four pieces of legislation and showed the relationships between the four. The RTP was adopted and acknowledged by the State Transportation Commission and the State Land Conservation and Development Commission and the Federal Government based upon an August 2000 adoption. The State and Federal governments have different update cycles requirements. The Federal Government has a three-year update requirement and the State has a five-year update requirement. Metro started down the path of doing this update trying to keep the State and Federal Update as a single document. Metro was now proposing to delay the State RTP adoption and stay within their window of five years, which would be August of 2005. Metro can't delay the Federal RTP. They have a three-year window. Their three-year window expires from their approval date of January 26, 2004. Metro had no choice but to do a federal update. Metro had hoped to keep these together to keep the confusion factor down but he was now recommending that we not proceed with the State RTP and therefore, he was proposing that Ordinance No. 03-1024 be withdrawn. The reason for this came up at Transportation Policy Advisory Committee (TPAC). TPAC recommended that we not proceed with the State RTP adoption because the State RTP requirements have a more substantive requirement than the Federal RTP requirement does, that is; Metro was extending our plan out to 2025 from 2020. That extra five years needs a good thorough analysis to determine whether or not that system meets the transportation demands and if there were shortfalls to come up with improvements to address those shortfalls. Metro had not done this, what had been done with this RTP was incorporated projects that had gone through some kind of planning process whether it was Metro's Powell Foster planning process or local comprehensive plan planning process which they were now completing in response to our last RTP. Metro was incorporating all of those changes. Metro was not trying to use this to go through a major reevaluation process. They were trying to use this to incorporate things that have been done in the past several years. For federal purposes it was necessary that we include those in the plan and most importantly it was necessary that we demonstrate that they conform to the air quality requirements. There was a

companion resolution, Resolution No. 03-3382, that was the air quality conformity resolution. Metro was proposing that that resolution be continued to next month. The conformity was not done. The work to estimate vehicle emissions was still underway. That will require that the public comment period for that conformity be extended until those results can be published and released and be made available for public comment. That public comment period has been extended until January 8, 2004. The action that they were proposing to proceed with was with Resolution Nos. 03-3380 and 03-3381. The Metropolitan Transportation Improvement Plan (MTIP) was the four-year programming of transportation dollars. The policy action Council had already taken in June 2003 was the allocation of a portion of the MTIP that Metro directly controls through Council action. This MTIP incorporates that policy action but as needed provides the greater detail as to which year, which project fall in, which phase, which source of funds. More importantly, it adds in the Oregon Department of Transportation (ODOT) funded projects and the TriMet funded projects to provide a complete federal picture of the federally funded projects. The MTIP was up for adoption. The federal RTP was up for adoption. They were proposing to withdraw the ordinance for the State RTP and the air quality conformity would be continued until next month. They had received 126 comments to date on the publication package. Tonight was the close of the public hearing. Tomorrow, they would have a comment and response document to follow the comments that have been received to date that they had been compiling and preparing responses for so that when Council was dealing with the action item Council would have a comment and response recommendation on all of the comments including the hearing comments from tonight's public hearing.

Council President Bragdon opened a public hearing on Ordinance No. 03-1024, Resolution Nos. 03-3380, 3381 and 3382. He noted a card from Mayor Eugene Grant, Happy Valley, who had left but submitted a letter.

Dr. Pamela Settlegood, SW Hills Residential Hogue, 4224 SW Melville Portland OR 97239 read her letter into the record (a copy of which may be found in the meeting record). Councilor Park said he didn't think we had money invested in the Tram project. He believed it was strictly City of Portland. He wasn't sure about the Sunset Hwy project. He asked Mr. Cotugno to address what was being proposed by individual jurisdictions and Metro's role and responsibility in that versus what was being perceived. Mr. Cotugno said the federal RTP, the most important component under the federal requirements, was to define what was called the fiscally constrained RTP. That was, what was the total system we can reasonably expect to build out there given all reasonably available funding sources. The monies that Metro allocate was part of that source of funds but a much bigger part were all of the other sources that were raised at the State and local level. We have made assumptions based upon past history how much ODOT money comes into the region and was available to be spent and in this case how much Portland system development charge revenues were paid, how much Portland urban renewal funds go toward transportation projects and in a similar fashion, Washington County MSTIP levy goes into transportation projects. Given all of those other sources around the region, what were the projects that we could expect to be built? Metro doesn't specially have Metro money, the federal funds that we allocate here in the TRAM but Portland does. Therefore, it was part of the overall system that we had identified for this RTP. We do have 10 million dollar of MTIP into the North Macadam infrastructure requirements. Metro had not pinned down yet which infrastructure that \$10 million was going towards, whether it was the streets, the streetcar or the TRAM. Metro had committed it to the overall North Macadam area. To date Portland has indicated that they were likely to request that those be assigned to the streets in the area not the TRAM or the streetcar. That has not been formally concluded yet.

Lenny Anderson, Coalition for a Livable Future/Transit Demand Management (TDM) Subcommittee, 2934 NE 27<sup>th</sup> Ave Portland OR 97212 expressed the fact that the process had precluded public involvement that they had come to expect from Metro and had been rushed. He was involved more and more as a member of the TPAC subcommittee for TDM. He was presenting a letter for the Coalition for a Livable Future (a copy of which may be found in the meeting record).

Councilor Newman asked if there was a specific project or a list of projects that he objected to in this update or was it just the percentages that were flowing to particular modes? Mr. Anderson responded that he couldn't identify a specific project. There seemed to be a slippage based on deferring to jurisdictions to simply include the ones that they have done. When you add all of those in and look at the resources available, we were spending more money on roads and less on transit. Some of that may be coincidental but that was not the direction we needed to go.

Councilor Burkholder said he agreed with Mr. Anderson. What this document reflects was the fact that on the State level there had been new money allocated specifically for highways and bridges and so this document includes that. The other part was a couple of major transit projects; the Airport Max and the Interstate Max were completed. Mr. Anderson still raised the issue up of where were the resources to complete our alternatives to the automobile facilities. There weren't new resources coming from the legislature. They were looking into new resources locally. This document reflects the current funding realities that we were facing. Mr. Anderson added that he thought that was instructive. It was a little disconcerting. Councilor Burkholder concurred.

Don Baack asked for clarification. Since they had received a lot of stuff just today and hadn't been able to put their thoughts down on paper, would the record be open to submit response after today? Council President Bragdon said he thought the record was closed as of today. Mr. Cotugno said the record was advertised as closing today but they had requested the record be extended on the air quality conformity Resolution No. 03-3382 until January 8, 2004. They were proposing to withdraw the ordinance. There will be a whole development process for a new RTP and it will have its own public comment period when the time comes. Council President Bragdon asked Mr. Baack if he was addressing the air quality issue? Mr. Baack said he did not know. He thought there were projects that were in the wrong years. They had only got the information that was being proposed today. Councilor Burkholder said one of the issues was that just yesterday Metro staff received a series of amendments for a project list from the City of Portland. Many of the projects were in this particular area. Had that been available for public comment? The answer was no. He thought by Metro accepting that list it behooved Metro to add some more time to allow people to make comments on the complete document. Those projects hadn't been available for public comment. Councilor Park asked for clarification on continuing the record and staying on track for what needed to be done in order to stay with the federal compliance. Council President Bragdon asked if we could extend the public comment period for two weeks. Councilor Park said they would hit the deadline on January 23, 2004. Mr. Cotugno said he didn't see a problem with extending the deadline until next Wednesday. He picked that date because JPACT was next Thursday. They had hoped to close the comment period today because TPAC was tomorrow. TPAC can make provisional recommendations. Council President Bragdon said the record would be extended until December 10<sup>th</sup>.

Don Baack, Hillsdale Neighborhood Association, 6495 SW Burlingame Place Portland OR 97239 read his letter into the record. Councilor Newman reiterated his concerns about connections to I-405. He noted that there was a lot of traffic going from southeast Portland but also through Clackamas County that went through Mr. Baack's neighborhood and were forced to go over the Taylors Ferry Tewilliger route to get to Washington County. The connection between the Ross Island Bridge and I-405 particularly in the Arthur-Carruthers section was so backed up. He

remembered the South Portland circulation plan that dealt with the redesign of Naito Parkway actually had fly over ramps that connected Ross Island Bridge and North Macadam to 405. Mr. Baack said he was on that committee and it was the major thing that most of the committee could agree on. The rest of it was much less important. Councilor Newman said the issue of funding it was a big mystery. He supported Mr. Baack's contention that it was a huge problem that was not just local but regional. His testimony was submitted by email (a copy of which is included in the meeting record).

Glenn Bridger, Southwest Neighborhoods Inc, a coalition of 16 neighborhoods in southwest, 940 SW Vincent Pkwy Portland OR 97219 said southwest Portland was hurting in terms of transportation infrastructure. He summarized his testimony (a copy of his letter is included in the meeting record)

Morgan Will, 3817 N Williams Ave Portland OR 97227. He said he was a resident of the Boise Neighborhood in north Portland. He was here to comment on the I-84 Trail. It was regional trail #37. He wanted to advocate for its inclusion on the constrained funding list. He spoke to the benefits of the trail for the region. The trail goes from the river to I-205. It was also suggested to go beyond to connect to a leg by 122<sup>nd</sup>. This trail would connect the downtown, the Rose Quarter, the Lloyd District, Hollywood District, 82<sup>nd</sup> Avenue, and Gateway. This was a regional trail that would help meet many of the goals of the 2040 Growth Concept. There were about 14 neighborhoods on the inner eastside of Portland that will be connected by this trail. Within a quarter mile of its route there were about 15 parks and 23 schools and playgrounds. The trail would link up to all Max stations that go through that corridor starting at the Rose Quarter Transit Center ending at the Gateway Transit Center. It would make easy bicycle connections to about 22 bus lines. There were about 16 city bikeways that cross or are next to the corridor that would help link users of the bike network to regional trails and regional resources such as the I-205 trail and eastside esplanade, OMSI to Springwater. People will be able to walk along the trail from their neighborhoods to services. He had walked the whole length of the route several times. He had counted about 50 access points. It would be an easily accessible trail for residents. There were also 17 bridged where people could get from the south side of the Banfield Corridor over to get to the trail. He had been advocating for this trail. A lot of people were excited about the trail. He was a Portland State University student studying urban and regional planning. He had been doing some research about the potential for this trail. He had done a mock grant application for it. He felt this project would help access in the region. He was working with a professor of Transportation Engineering at PSU in cooperation with some city planners and Metro trail planners to have a Senior Engineering Capstone course to have a look at this trail from an engineering standpoint. They should be getting some output from that course at the end of the winter term. It was good time to make it fundable. There were some requests for some feasible study. He encouraged that this be approved. Council President Bragdon asked if this trail wasn't in the RTP. Councilor Monroe had made a motion to include this in the RTP. Mr. Will explained that this was about two years ago. The trail was put on the RTP as a proposed trail but the idea now was that it moved into the financially constrained list, which makes it available to get funding toward it. It makes it more of a priority for funding as funding arises. It needed to have a feasibility study. Councilor Newman asked where it had to be in the RTP to get any kind of funding?

David Redlich, Homestead Neighborhood Association, 3444 SW Condor Ave Portland OR 97239 expressed concern about how the meeting was run. He felt they needed to find a better way for public hearings. He felt public participation was being stymied. He opposed the Urban Growth Boundary expansion. If they needed industrial land, they should use the existing paved parking lots in the region. He suggested micro business orientations for industrial land. He supported

comments made by Glenn Bridger. He said the OHSU solution needed to be a regional solution. He commented on the extension of public hearing to December 10<sup>th</sup>. He said the City of Portland had submitted documents late so that there was little time to comment on them. He recommended Metro send a clear signal that this Council supported public comment.

Jay Mower, Columbia Slough Watershed Council, 7040 NE 4<sup>7th</sup> Ave, Portland OR 97218 read his letter into the record (a copy of which may be found in the meeting record).

Council President Bragdon closed the public hearing.

Councilor Newman asked the Mr. Cotugno respond to his question about trail funding. Mr. Cotugno explained that any federal funds that get allocated have to be consistent with a adopted fiscally constrained air quality conformed RTP. If you desire to allocate money to a project through the next MTIP round, then it would have to be part of this fiscally constrained air quality conformed RTP or get added to the fiscally constrained air quality conformed RTP. We have done amendments as part of the MTIP adoption in the past. The biggest hurdle was the air quality conformity because of the expense. A highway capacity expansion project would require new emission estimates to determine their air quality conformity. Trail and transit projects were all exempt projects so you wouldn't need to do the air quality conformity. You do need to take formal action to amend the RTP. Councilor Newman said the trail that was brought up was something that was added to the RTP but not the financially constrained RTP? Mr. Cotugno said yes. Councilor Burkholder asked what the process was to add a feasibility study for a trail to a fiscally constrained list. How would that happen in the next two weeks or in time for this update? Mr. Cotugno said the feasibility study wasn't the issue. The real issue was the financial caps. Kim Ellis responded that a feasibility study would be about \$50,000. She said staff was recommending adding some of the trails to the financially constrained system. We have been compiling a list of all of the comments received, developing staff recommendations, which would be forwarded to TPAC, JPACT and the Metro Council for approval. Councilor Newman asked if the project related to Milwaukie, Oak Grove and Lake Oswego was recommended for the financially constrained list? Ms. Ellis said the request was added to the project list so it had been added to the preferred system. It was not recommended for inclusion in the financially constrained system. Councilor Park commented on testimony on Title 4 and RTP.

Re: Regional Transportation Plan Update response

Dear Metro:

Please stop wasting taxpayer money on so-called "light rail" and "commuter rail" white elephants.

Per million dollars spent, freeway improvements will produce more new transportation capacity, including trucks, than mass transit.

Mass transit "True Believers" continuously overstate ridership and understate capital and operating costs. The Beaverton-Wilsonville "commuter rail" project from nowhere to nowhere, originally was estimated to cost about \$70 million; the latest estimate is \$120 million-plus.

My understanding is that the Highway 217 task force is considering a so-called "high occupancy lane." That deprives motorists of the use of traffic lanes they have financed, does little to reduce congestion, and increases congestion.

My further understanding is that Metro intends to issue revenue bonds totaling \$15 million as its "share" of the Beaverton-Wilsonville commuter rail project.

Subject to legal research my preliminary view is that revenue bonds must be repaid from the project the revenue bonds finance.

I will attend the Thursday, December 4, 2003 meeting starting at 2 p.m. Parenthetically, most people work at that time. I suggest that at least one public hearing start at 7 p.m.

Sincerely,

Henry Kane  
C: Metro Counsel D. B. Cooper

## MEMORANDUM

### CITY OF TIGARD

---

TO: Kim Ellis/Tom Kloster, Metro

FROM: Gus Duenas, City of Tigard

DATE: October 31, 2003

SUBJECT: RTP updates – financially constrained system

In a previous memo, Tigard provided you with our recommended updates to the RTP, including several projects to be added to the financially constrained system. Since that time, it has become evident that limited funding will not allow for all of the requested projects to be placed on the financially constrained system.

After discussing this issue internally, and with the understanding that Metro plans to conduct a more rigorous and detailed update to the RTP next year, Tigard is changing the recommendation that both the Washington Square Regional Center over-crossings be added to the financially constrained system at this time. It is our intent to request that both of these regionally significant projects be added to the financially constrained system during the next RTP update.

The following is a summary of Tigard's updated request:

#### **Projects to be added to the RTP:**

The following projects are identified in the Tigard Transportation System Plan, serve a regional center or town center, and serve a regional need and Tigard requests that these be included in the RTP update.

**Add the Washington Square Regional Center Greenbelt Trail to the Regional Bicycle System Map and include the project in the funding systems.**

Explanation: The portion from Hall to Greenburg received funding on this past MTIP allocation for design and the portion from Hall to 217 also received funding for construction. Funding will be requested in the future to complete construction of the portion between 217 and Greenburg and to complete remaining segments. Estimated cost for filling in trail gaps is approximately

\$2 million (from Washington Square Implementation Plan). Tigard requests that this be added to the financially constrained system.

**Walnut Street extension east of 99W to meet Hall Blvd. and Hunziker.**

Explanation: The Tigard TSP identifies a connection of Walnut east of 99W to meet Hall Boulevard and Hunziker Street. The estimated cost is \$19 million. This would serve the Tigard Town Center area.

**Projects to be added to Financially Constrained System**

The following projects are not currently on the financially constrained system and Tigard is requesting that they be added:

**(no RTP project #) Washington Square Regional Center Greenbelt Trail**

Explanation: The portion from Hall to Greenburg received funding on this past MTIP allocation for design and the portion from Hall to 217 also received funding for construction. Funding will be requested in the future to complete construction of the portion between 217 and Greenburg and to complete remaining segments. Estimated cost for filling in trail gaps is approximately \$2 million (From Washington Square Implementation Plan).

**RTP project # 6011 – Hwy 217 over-crossing - South Mall to Nimbus Connection (Nimbus to Locust Street).**

Explanation: This project is identified as the 3<sup>rd</sup> priority in the Washington Square Regional Center Plan and is entirely within Tigard's jurisdiction. Given recent development proposals in this area, it may be more important to construct this project than other higher priority projects if additional funding is made available. In addition, a connection in this area will also complement the commuter rail project by providing better east/west connections to the Regional Center area. The transportation improvements within the Regional Center will ease existing congestion on State facilities (Hwy 217 and Hall Blvd). Estimated cost for construction (design to construction) is \$26 million.

**Projects Critical to remain on the Financially Constrained System**

In addition, Tigard supports the following projects being maintained on the financially constrained system:

- RTP project #6009 – Highway 217 Corridor Study
- RTP project #6014 – Greenburg Rd improvements
- RTP project #6015 – Greenburg Rd improvements, North
- RTP project #6016 – Greenburg Rd improvements, South
- RTP project #6034 – Walnut Street Improvements, Phase 3
- RTP project #6040 – 72<sup>nd</sup> Avenue Improvements, 99W to Hunziker Rd
- RTP project #6041 – 72<sup>nd</sup> Avenue Improvements, Hunziker Rd to Bonita rd
- RTP project #6042 – 72<sup>nd</sup> Avenue Improvements, Bonita Rd to Durham Rd

## **Projects to be removed from the Financially Constrained System**

A few projects in Tigard on the Financially Constrained system have been constructed and can be removed from the Financially Constrained system:

RTP project #6033 – Walnut Street Improvements, Phase I  
Reason - Completed (\$2,021,250 estimated project cost)

RTP project # 6046 – Walnut Street Improvements, Phase II  
Reason – Completed (\$6,601,356 estimated project cost)

## **Project clarifications for RTP**

Tigard has identified several clarification issues that need to be addressed in the RTP update. Below is a description of the issues with the necessary clarifications underlined.

**RTP project # 6011** is listed on the RTP project list, however it is not identified on the RTP map or in the text of the RTP. Also, this project should be a Tigard jurisdiction as well as ODOT. This is the South Mall to Nimbus Connection identified in the Regional Center Plan. The Washington Square Implementation Plan identifies this project cost at approximately \$26 million.

**RTP project # 6032** is listed on the RTP project list, however it is not identified on the RTP map or in the text of the RTP. The project description in Tigard's TSP states: "Realign Hunziker Road to meet Hampton at 72<sup>nd</sup> Avenue – requires overcrossing over ORE 217 - removes existing 72<sup>nd</sup>/Hunziker intersection." The TSP estimates the cost for this improvement at \$10 million.

**RTP project #6052** should have both Tigard and Beaverton under the jurisdiction as it enters both Cities. The project location is Nimbus Drive to Northern Mall area. The Washington Square Implementation Plan identifies this project cost at approximately \$30 million.

**RTP project #6053** – the Washington Square Implementation Plan identifies this project cost at approximately \$38 million.

A few **discrepancies** were noted between the RTP and TSP in the functional classification: Beef Bend, Gaarde and Walnut from Gaarde to Scholls are arterials in the TSP but listed as a collectors in the RTP. When Tigard adopted the TSP, it was acknowledged that these discrepancies exist.

Thank you for considering Tigard's comments in the RTP update process. We look forward to reviewing and commenting on the draft documents.

Kim -- sorry for the late submittal. I have reviewed the Metro and ODOT RTP project lists, and identified apparent differences. Some assorted discrepancies between ODOT and Metro Financially-Constrained (FC) lists. Some adjustments to projects proposed by City of Portland (CoP) for ODOT's list. See attached spreadsheet of ODOT projects in RTP FC list, and Expanded Financially-Constrained list. Items in spreadsheet highlighted in yellow indicate new cost estimates, or projects split into two projects; items highlighted in green indicate projects have been proposed for another category than earlier drafts, and/or are in different category than RTP assignment; items highlighted in red (Glencoe Interchange project phases) are proposed for FC and Expanded FC categories, since within Metro AQ boundary, but not Metro Planning boundary. More specific information on selected projects are explained below. If you have any questions, give me a call @ 731-8230.

<<RTP2000ODOT\_6.xls>>

RTP # Project Description >> Discrepancy  
>> Recommendations

1024 I-5/McLoughlin Ramps (\$23.1M/\$18.4M ODOT)>>On Metro's FC list; On ODOT & CoP's Expanded FC list .>>Move project to Expanded FC.  
1030 Ross Island Bridgehead (\$5.1M/\$4.1M ODOT) >>On Metro & ODOT's FC list; On Cop's Expanded FC list. >>Move project to Expanded FC  
4037 Columbia/Lomb. Intersections @ MLK (\$0.81M? or \$2M MTIP PE?) >>Metro moved to Preferred; Not on ODOT or CoP FC list; some confusion by Port re: which RTP project received MTIP funds (#4015 study; #4030 11th/13th St. Connector; or #4037 Lomb./Columbia intersections)>>Place appropriate MTIP project in FC - \$0 ODOT.  
3011 US 26 Murray to 185th (\$12.3M?)>>On Metro's FC list, as well as overlapping #3009 Murray to Cornell (on ODOT's FC list); #3011 is on ODOT's Expanded FC as Cornell to 185th >>Split #3011 Murray to 185th project into segments, keep # 3009 (Murray to Cornell) on FC list (new cost est. ODOT/Wash. Co. IGA: \$8.37M/ODOT \$1.241M + \$4.7M OTIA/\$2.409M non-ODOT), and move Cornell to 185th (# 3011?) to Expanded FC (\$11.63M/\$9.3M ODOT; \$2.36M non-ODOT).  
3129 Glencoe Interchange (\$13.8M)>># 3129A on ODOT's FC list for PE/EA (\$0.500M - all ODOT), and on Preferred List for ROW & Construction, but Metro has dropped from RTP completely since project is outside Metro planning area boundary -- although within Metro Air Quality Monitoring Area boundary >>Move # 3129 (construction: \$13.8M - \$11.04M ODOT) & #3129B (R-o-W: \$2.0M/\$1.6M ODOT) from Preferred to Expanded FC., if appropriate to be included in RTP at all, for modeling?  
2028 Powell Blvd. Improve. - 174th to Burnside (\$21M) >>On Metro's FC list; ODOT had moved from FC to Preferred List (\$11.9M/ODOT \$0/OTIA \$5.25M)>>propose split project into segments: #2028: 174th to Eastman Parkway(\$11.9M/ODOT \$0 + \$5.25M OTIA) to FC list, and # 2028A?: Eastman Parkway to Burnside (difference from \$21M ? = \$9.1M/\$7.28M ODOT) to Expanded FC.  
5135 McLoughlin Blvd. Improve. Ph. 1 (I-205 to 10th) - Oregon City (\$5.85M/ODOT \$0) >>On Metro's FC list; ODOT moved from FC to Preferred List >>move to Expanded FC  
6005? I-5/99W Connector Ph. 1 Arterial Connector (\$53.0M/\$43.0M ODOT) >>On ODOT FC list. Not included in Metro FC or Preferred List. (RTP # 6005 I-5/99W connector Ph. 2 Freeway [\$288.75M] is on Metro's Preferred list) >>Add I-5/99W Connector Ph. 1 Arterial Connection to FC list to assure modeling of Ph. 1  
New Hwy 217 Improvements - braid SB on-ramp from BH Hwy with SB off-ramp to Allen Blvd. (\$15M/\$12M ODOT) >>On ODOT's Expanded FC list. Not on Metro's FC or Preferred lists >> Place on Expanded FC

**MEMORANDUM**

To: Tom Kloster, Metro  
From: Deena Platman, Transportation Planning  
CC: Laurel Wentworth, John Gillam  
Subject: Comments on draft 2004 Regional Transportation Plan (RTP) Update Documents

I have taken the opportunity to review the four update documents that comprise the 2004 RTP update and have the following comments:

**1 - Policy Update**

- The street design section has N Ivanhoe (Richmond to Philadelphia) updated to Community Street. This item should be removed from the list because the existing classification is Community Street.
- McLoughlin Blvd - Urban Road termini should change from SE 17<sup>th</sup> - City limits to Woodward - 17<sup>th</sup>.
- N Richmond (Lombard to Ivanhoe) should remain a Community Street.
- NE Sandy's termini for the Regional Street classification should change from 12<sup>th</sup> - 47<sup>th</sup> to 54<sup>th</sup> - 57<sup>th</sup>. The street design classification should change from Regional Blvd to Regional Street.
- NE Sandy's Regional Blvd classification termini should change from 47<sup>th</sup> - 82<sup>nd</sup> to 57<sup>th</sup> - 82<sup>nd</sup>.
- Sandy Blvd (98<sup>th</sup> - 122<sup>nd</sup>) is classified as a Regional Blvd in the 2000 RTP not a Community Blvd.
- SE 17<sup>th</sup> termini for Community Blvd should change from Tacoma - Andover to Tacoma - Linn.
- NE/SE 39<sup>th</sup> termini for the Regional Street classification should change from Broadway - Powell to Broadway - Holgate.
- SE 39<sup>th</sup> termini for Community Street should change from Powell - Woodstock to Holgate - Woodstock.

**2 - Project Update**

- Update the project names for the streetcar projects as follows:
  - #1015 - Portland Streetcar - Phase 3a (RiverPlace)
  - #1086 - Portland Streetcar - Phase 3b (Gibbs)
  - #1087 - Portland Streetcar - Phase 3c (Bancroft)
  - #1106 - Portland Streetcar - Eastside, Phase 1 (Lloyd District)
  - #1107 - Portland Streetcar - Eastside, Phase 2 (CEID)

- #1199 - Barbur Blvd Pedestrian Access to Transit Improvements should be moved to the Preferred System. The I-5/Barbur Corridor Study will precede improvements in this corridor.
- #2016 – NE Halsey Bikeway should be moved to the Preferred System. Due to right-of-way constraints, the project needs additional study to determine feasibility. The Tillamook Bike Boulevard provides an alternative route through this section of northeast Portland.
- #4015 – US-30 Bypass Improvements Study should be combined with #4037. Delete #4015.
- #4030 – NE 11-13<sup>th</sup> Avenue Connector should be combined with #4037. Delete #4030.
- #4037 – Columbia and Lombard Intersection Improvements should be updated as follows:

Name: Lombard – Columbia Connection near MLK Jr Blvd.

Description: Improve road connection between Columbia Blvd and Lombard in the vicinity of MLK Jr Blvd to 11<sup>th</sup>/13<sup>th</sup>, to facilitate freight movement.

Est. Cost: \$16, 835,000

Jurisdiction: Portland/Port

RTP Program Years: 2004 – 2009

### **3 – Technical Update**

No changes

### **4 – Air Quality Conformity**

No changes

Nov. 20, 2003

To: Kim Ellis, Metro  
From: Clark Berry *CB*  
Subject: **Revisions to RTP Project List**

Attached are suggested changes to the RTP Project List (10/31/03 Public Comment Draft). Changes are grouped into one of three categories consisting of Project Description Revisions, Project Additions and Project Deletions. Many of the proposed changes are requested to maintain consistency between this RTP update and the Washington County Transportation Plan adopted in Oct. 2002.

Project Description Revisions

- #1185 – Change program years to 2004-09 to reflect scheduled project completion under MSTIP3 in 2004/05.
- #3011 – Change project description to read Cornell to 185<sup>th</sup> to be consistent with #3009.
- #3036 – Change cost estimate to \$12.7 million to be consistent with County Transportation Plan.
- #3066 and #3067 - Change 2040 link from Beaverton Corridor to Bethany TC.
- #3069 – Change location to Allen to Beaverton-Hillsdale Hwy. and cost estimate to \$13.3 million to be consistent with County Transportation Plan.
- #3099 – Change jurisdiction to Washington County because road is planned to remain part of Countywide Road System (i.e., is and will be under County's roadway jurisdiction) and change cost estimate to \$14.8 million to be consistent with County Transportation Plan.
- #3103 – Change project location to 185<sup>th</sup> to Brookwood and cost estimate to \$34.8 million to be consistent with County Transportation Plan.
- #3115 – Change jurisdiction to Wash. Co. to reflect current roadway jurisdictional responsibility.
- #3133 – Change project description to read "Construct eastbound on-ramp, westbound off-ramp and southbound auxiliary lane" to reflect anticipated improvements already funded under OTIA.
- #3137 – Change cost estimate to \$12.5 million to reflect County Transportation Plan.
- #3142 – Change project location to read "170<sup>th</sup> to Cornelius Pass" with an estimated cost of \$21 million and program year of 2010-15.

#3149 – Change project description to read “Relocate westbound on-ramp to construct westbound to southbound loop ramp and widen overcrossing to accommodate additional southbound through-lane”.

#3174 – Change project location to “Leahy to 84<sup>th</sup> Ave.” and project description to “widen to 5 lanes...” to be consistent with County Transportation Plan.

#3176 – Change project name to 95<sup>th</sup> Avenue Extension.

#3180 – Change project description to read “Construct new collector with sidewalks and bike lanes”

#3186 – Change project location to read “Hwy. 26 to Cornell” to be consistent with new proposed MSTIP project.

#3188 – Change project location to read “Cornell to Laidlaw” to be consistent with new proposed MSTIP project.

#3199 – For consistency with County Transportation Plan, change project location to read “143<sup>rd</sup> Avenue to future Springville Extension” and change cost estimate to \$21.3 million.

#3202 – For consistency with County Transportation Plan, change project location to read “Future Springville Extension to Cornelius Pass” and include cost estimate of \$12.4 million.

#3209 – Change 2040 link from Tanasbourne TC to Bethany TC.

#3214 – Delete phrase “complete boulevard design improvements” from project description because project is not designated for boulevard design considerations in County Transportation Plan.

#3215 – Change cost estimate to \$15.4 million to be consistent with County Transportation Plan.

#6030 – Change cost estimate to \$41.6 million to be consistent with County Transportation Plan.

#6043 – Change cost estimate to \$8.2 million to be consistent with County Transportation Plan.

### Project Additions

New project – Add to Preferred System the widening of 209<sup>th</sup> from Kinnaman to Farmington Rd. @ \$21 million in the 2010-2015 time period.

New project – Add to Preferred System the widening of 173<sup>rd</sup> from Bronson to Meadowgrass to 3 lanes with bikelanes and sidewalks @ \$13.9 million in the 2016-25

time period. This project is the continuation of RTP project #3205 the 173<sup>rd</sup>/174<sup>th</sup> undercrossing of Hwy. 26. This route is also designated as an arterial road in both the 2000 RTP and the County's Transportation Plan.

New project – Add to Preferred System the widening of Springville Rd. from 185<sup>th</sup> to PCC access to 5 lanes @ \$3.8 million in the 2010-15 time period.

New project – Add to Preferred System the widening of Springville Rd. from PCC access to Kaiser Rd. to 3 lanes @ \$9.6 million in the 2016-25 time period.

New project – Add to Preferred System the widening of Laidlaw Rd. from West Union to Kaiser to 3 lanes @ \$11 million in the 2010-15 time period.

New project – Add to Preferred System the widening of Kaiser Rd. from Bethany Blvd. to Cornell Rd. to 3 lanes @ \$18.6 million in the 2010-15 time period.

New project – Add to Preferred System the widening of Kaiser Rd. from Springville to Bethany Blvd. to 5 lanes @ \$4.6 million in the 2016-25 time period.

New project – Add to Preferred System the widening of Jenkins Rd. from Murray to 185<sup>th</sup> to five lanes @ \$7.3 million in the 2010-15 time period (this may already be on the list but I couldn't find it).

New project – Add to Preferred System the widening of 197<sup>th</sup>/198<sup>th</sup> from TV Hwy. to Baseline to 3 lanes @\$13.9 million in the 2016-25 time period. This is identified as a collector of regional significance in the 2000 RTP and is included in the County's Transportation Plan project list.

New project – Add to Preferred System "Cornelius Pass Interchange Improvement @ Hwy. 26 to add northbound to westbound loop ramp". Estimated cost is \$30 million and program year is 2016-25.

New project – To be consistent with County Transportation Plan, add to Preferred System "Widen Barnes Rd. from Leahy to County Line to 3 lanes for \$7.5 million in 2016-25 time period".

### Project Deletions

#3024 – Delete project on Hwy. 26 from Cornell to 185<sup>th</sup> which duplicates revised #3011.

#3043 – Delete seven-lane project on Walker Rd. from Cedar Hills to Murray because need shown in Wash. Co. Transportation Plan is only five lanes.

If you have questions or if any of these proposed changes conflict with other proposed changes you have received from Washington County jurisdictions, please call me at 503 846-3876 so we can reconcile the conflict before revising the RTP. Thanks.

**Subject: RTP update problem**

**Date:** Monday, November 17, 2003 1:44 PM

**From:** Platman, Deena <Deena.Platman@pdxtrans.org>

**To:** "Kim Ellis (E-mail)" ellisk@metro.dst.or.us

**Cc:** "Gillam, John" John.Gillam@pdxtrans.org

Hey Kim,

I'm yet again looking at the update list and I found a problem. #1106 is now the Eastside Streetcar Phase 1 but we still need the original Eastside Streetcar Feasibility Study that this project replaced. This study is actually separate from the Portland Streetcar, Eastside project. The idea is to look at extending the streetcar into neighborhoods outside of Central City.

Can you add this back in as a new # and put it into the preferred system?

**MEMORANDUM**

TO: Kim Ellis, Senior Transportation Planner, Metro  
FROM: John Wiebke, Urban Planner

RE: **2004 Regional Transportation Plan Update**

Upon review of the latest 2004 RTP Update draft language, the City has the following comments:

1. New projects added to the preferred and financially constrained lists for Hillsboro have RTP program years out to 2016-2025. The projects in question are:
  - RTP 3099 (1<sup>st</sup> Avenue/Glencoe Road widening)
  - RTP 3118 (TV Highway/Brookwood Avenue intersection alignment)
  - RTP 3117 (Grant Street East-West connector/extension to Brookwood Pkwy)
  - RTP 3139 (US 26 over crossing at 229<sup>th</sup> Avenue)

The program years for all these projects should be moved up to 2004-2009. In particular, Project 3118 (TV Highway/Brookwood Avenue) is the City's top priority and should be programmed for 2004-2009.

2. Table 1.3 of the 2000 RTP specifies the following non-SOV modal targets for 2040 land use types:
  - 45-55% for regional/town centers, main streets, station communities, and corridors.
  - 40-45% for industrial/employment areas, intermodal facilities and inner/outer neighborhoods.

Non-SOV modal target is an outstanding issue that was never thoroughly resolved when the 2000 RTP was adopted. How do we measure jurisdiction compliance? Are the targets achievable? These and other questions are what this section is trying to address. Therefore, it would be advisable to seek clarification on this topic from Metro staff during the next TPAC meeting.

600 NE Grand Ave  
Portland, OR 97232-2736

Dear Brian:

Re: Support for Tillamook Branch Trestle Addition to RTP

We are writing in support for the concept of adding the Tillamook Branch Trestle to the RTP being considered early next month. We understand that grant funds may be available and see this as a potentially important project. We also understand that the 4C Technical Advisory Committee has also expressed support.

The concept of an east/west connector and pedestrian path has great appeal and could be another step in better connecting our County that sometimes feels divided by the Willamette River. We see the potential of future pedestrian, bike and multi-uses that could join with other trail systems and networks being developed. An additional benefit is preserving the trestle as a possible commuter rail alignment in the future, another means of connecting our County. And, we also like the idea of preserving the trestle, an old, established Clackamas County landmark that links two of our important cities.

Please consider this project as you move the RTP forward.

Sincerely,

Bill Kennemer  
Chair

Larry Sowa

RE: RTP Update Public Comments

Dear Ms. Ellis:

The City of Wilsonville has several preliminary comments regarding the draft 2004 RTP Update. They are as follows:

1. As submitted at the October 29, 2003 TPAC Workshop, the City of Wilsonville has re-evaluated two project priorities since the last update of the financially constrained list and they would include the following changes to the draft 2004 RTP:
  - Remove project #6091, the Boeckman Road I-5 Overcrossing, from the financially constrained list and move it to the preferred system. The project total in the draft RTP is \$9,890,000.
  - Add project #6093, the Barber Street extension to the financially constrained list. The project total in the draft RTP is \$7,310,000.

As you can see, this would remove a burden of over 2.5 million dollars from the financially constrained system. The Barber Street Extension project was determined to be a higher priority project because of its ability to have a greater impact on providing relief to the Wilsonville Road Interchange. This was concluded as part of the *I-5/Wilsonville Freeway Access Study*, which was prepared by DKS Associates in November of 2002 in coordination with ODOT, Metro, and the City of Wilsonville.

2. Appendix 4 – Transportation Analysis Zone Assumptions, does not list Wilsonville as an Industrial Area (pg. 3) under 2040 Grouping. I suggest that we be included as a Tier 1 or, at least, as a Tier 2.
3. The City is currently reviewing the proposed Policy Map Amendments for compliance with the City of Wilsonville Transportation Systems Plan. If there are any modifications needed, we will forward these to you before December 4, 2003.

Thank you for the opportunity to provide these preliminary comments on the draft 2004 RTP Update. If you have any questions, please call me at (503) 682-4960.

Sincerely,

A handwritten signature in cursive script that reads "Laurel Byer".

**Re: Recommendations on the 2004 Regional transportation plan**

Below are our comments on the draft 2004 RTP. While we are supportive of going forward with adopting an RTP that meets federal regulations, we do not believe adopting an RTP that is adopted by ordinance and attempts to meet the Oregon Transportation Planning Rule is necessary. Simply, we believe it would be irresponsible for TPAC to recommend adoption of a "state" RTP given the level of effort that has gone into this planning exercise. There is no compelling reason to do this now. Instead, we urge that TPAC recommend the following to JPACT:

- 1. Proceed with adoption of the federal RTP*
- 2. At this time, do not adopt a revised RTP that attempts to meet the Transportation Planning Rule and other state land use requirements.*
- 3. Direct Metro staff to establish a work program for undertaking a comprehensive update of the RTP. The initial task in this effort would be the development of a coordinated, thoroughly reviewed 2025 forecast.*

The Washington County Coordinating Committee – Transportation Advisory Committee met and discussed this issue at their November 21, 2003 meeting. The WCCC-TAC agrees in principal with these recommendations. To date, we have not unearthed any fatal flaw to this approach. However, both the County and the WCCC-TAC hope that this approach continues to be looked at prior to formal adoption.

**Reasons for our recommendation**

Metro staff has described this effort as a "minor" update. We believe "minor" is a very subjective term. The plan is based on a new 2025 population and employment forecast, which, to date, has had absolutely no review by Washington County, and, to our knowledge, any other local governments in the Metro area. The forecast is essential in driving the development of the rest of the plan. We have no way to determine whether

or not this Forecast reasonably reflects the amount and location of future growth, and in turn, no way to determine whether or not the expected travel demand on the assumed transportation system is reasonable. To use an old, but appropriate analogy, adopting a new state RTP is like building a house without any knowledge of the quality of the foundation. This new 2025 forecast is a quantifiable vision of what the region looks like 20 years from now. Yet, the vision remains hidden and unreviewed. While it may be a good first draft, it's certainly unrealistic to assume that it will be endorsed, much less embraced, as a "shared vision" without months of rigorous review by local governments. Moreover, Statewide Planning Goal 2 requires an adequate factual base in order to make land use decisions. In this case, we don't believe an adequate factual base has been established.

The primary benefit, to local governments, in adopting a "state" RTP at this time is for simplicity sake. It is easy to explain to the public and others that there is just one single Regional Transportation Plan, and that it meets both Federal and State requirements. But, as we all know, transportation planning and funding is complex and is not simple. While having two Regional Transportation Plans may marginally add to the complexity, at this time, the benefits of one single Regional Transportation Plan simply don't outweigh the costs and problems that adopting a new state RTP may create.

Our concerns are primarily a result of reviewing the "Technical Update" dated October 31, 2003 (document #3 of 4). Our concerns include, but aren't limited to:

Page 6-5 660.012.00206-5 – Here is the beginning discussion about how the TSP adequately serves regional transportation needs. First off, because we haven't been part of a rigorous forecast or modeling development exercise, we have no idea what needs we are talking about in 2025. We have not seen any modeling results to understand whether or not the RTP adequately addresses those needs.

Page 6-5 660.012.0025 – It's stated here that this is the first regional RTP. While we hope that a new one isn't adopted, wouldn't this be the second?

Page 6-6 660.012.0030 – Determination of transportation needs. There is no evidence that this RTP followed these requirements.

Page 6-6 660.012.0035 – Define what a “minor” update is. In the bottom paragraph, it’s stated that the Preferred System is adequate to meet state and regional travel needs. To date, we have seen no data that makes this case. And, if we ultimately do see the data, it will likely be from a modeling and analysis exercise that did not involve local governments.

Page 6-6 660.012.0035(4) – So, how does this RTP address the modal targets? Are we making progress or losing ground? Is it a result of the transportation improvements in this plan, or different underlying population and employment assumptions in the individual TAZ’s? Isn’t this a future update of the RTP? So, has it adequately expanded on alternative measures?

Page 6-13, Chapter 2 – This states that local plans must be consistent with the 2025 population and employment forecasts. After several years, we finally developed and adopted an acknowledged plan that was based on the 2020 forecast. So, now what? Do we have to use the 2025 forecast for plan amendments? Do we need to use the new forecast for designing road projects? The more fundamental issue is we have no idea what is in the 2025 forecast or how it differs from the 2020 forecast.

Page 6-48, 6.7.7 Areas of Special Concern – Given the amount of congestion anticipated by the 2000 RTP, these are particular areas of the plan with which County staff has considerable concern. Simply, without a thorough analysis, it’s very difficult to say how existing areas of special concern have changed and whether there would be more areas of special concern. However, as a result of more growth and a different pattern of growth as indicated in a new 2025 forecast, there may be entirely new Areas of Special Concern where regional performance measures can not be met. We believe it’s irresponsible to go forward with a new RTP without a thorough analysis and public understanding of this issue.

If Metro does proceed with adopting a new state RTP, we believe the RTP should include those Deficiency Areas found in the County’s transportation plan that aren’t in the RTP. These additional Deficiency Areas (the County’s different, but probably more accurate term for Areas of Special Concern) include two portions of Cornell Road, Murray Boulevard from Walker to Beard, Farmington road from Hocken to 170<sup>th</sup>, Washington Square Regional Center, Beaverton Regional Center, and a corridor between Scholls Ferry and Hwy 99W. We would suspect there are other locations

outside of Washington County that don't meet the adopted performance measures.

6-58 Defining System Adequacy - We're not sure why there is a need to highlight this specific issue at this time. 660.012.0060 is clear that plan amendments need to be evaluated against planned transportation improvements. To us, that is clearly the "preferred" system. Very little land development is dependent on a plan amendment in order to proceed. Thus, we believe the larger issue is how well is the financially constrained system keeping up with actual development. It is a much, much larger issue than what the precise words of 660.012.0060 actually mean. We believe this discussion needs to be broader, and not limited to evaluating local plan amendments.

### Other issues

We are unsure, given the lack of analysis and coordination in developing the forecast, how Metro will make findings that this "new" RTP is consistent with the all of the policies in the current acknowledged State RTP. Several other parts of the RTP would need to be updated.

Here are some, but not all, of the Policies for which we believe it will be difficult to make findings:

Policy 1.0 Public Involvement – Given the "fast-track" nature of this RTP amendment process, it seems at odds with this policy. There simply isn't enough time to revise the plans based on public comment, as appropriate.

Policy 2.0 Intergovernmental Coordination – There has been very little coordination (in other words, none) regarding the forecast used to develop the new state RTP.

Policy 3.0 Urban Form – Does the new plan facilitate or hurt implementation of the 2040 Growth Concept. Has mobility and accessibility improved or decreased? Where is the data that backs up the findings?

Policy 7.0 Natural Environment – Is this effort consistent with Metro's goal 5 efforts. If so, why?

Policy 13.0 Regional Motor Vehicle System – “e” says that the plan will maintain an acceptable level of service on the regional motor vehicle system during peak and off-peak periods of demand, as defined in table. 1.2. So, where is the analysis that backs this up? Is it based on a forecast that has had sufficient intergovernmental coordination?

Policy 14.3 So how do the transit travel times measure up in this new plan? Where is the data to evaluate this Policy?

Policy 16.1 Does the bike mode share go up or down in this plan?

Policy 17.1 Does the pedestrian mode share go up or down in this plan?

Chapter 2 of the RTP – This entire 18 page chapter needs to be re-written to reflect the new forecast.

Chapter 3 – Much of this Chapter needs to be re-written to reflect the new forecast.

Chapter 4 – Will this Chapter be redone to reflect the new revenue forecasts?

Chapter 5 – Much of this Chapter needs to be re-written given the new forecast. The current RTP contains some excellent colored project maps. Is there a budget to reprint and redistribute a new RTP with new maps? We believe a broad redistribution is critical for broad acceptance, understanding and use.

## **Conclusion**

We applaud Metro staff’s efforts to pull together a financially constrained RTP that meets federal requirements. Given the timelines, we appreciate all of the hard work that has gone into this effort. However, at this time, we see no good reason to adopt (and a vast array of reasons not to adopt) an RTP update that attempts to meet the Transportation Planning Rule and other State requirements.

Instead, we urge that TPAC recommend the following to JPACT:

- *Proceed with adoption of the federal RTP*

- *At this time, do not adopt a revised RTP that attempts to meet the Transportation Planning Rule and other state land use requirements.*
- *Direct Metro staff to establish a work program for undertaking a comprehensive update of the RTP. The initial task in this effort would be the development of a coordinated, thoroughly reviewed 2025 forecast.*

Thank you again for the opportunity to comment.

Sincerely,

Andy Back  
Principal Planner

November 24, 2003

Brian Newman, Councilor  
Metro  
600 NE Grand Ave.  
Portland, OR 97232-2736

Dear Brian:

I am writing to follow up on our recent conversation about the need for a pedestrian bridge across the Willamette River near Lake Oswego. Adding facilities for bicyclists and pedestrians to the existing railroad bridge would appear to be the most efficient way of accomplishing this.

There is currently no pedestrian crossing of the Willamette between Oregon City and the Sellwood Bridge in Southeast Portland. The addition of a bridge for bicyclists and pedestrians at this location will do a great deal to improve connectivity for the entire region, and could eventually facilitate a connection all the way to the coast.

I will look forward to working with you on this proposal in the future.

If you have any questions about this, please feel free to contact me or our Community Development Director, Stephan Lashbrook.

Sincerely,

FOR  
Douglas J. Schmitz, City Manager

## Marilyn Matteson - RTP update public comments

---

**From:** Brad & Katrina Halverson <halverbk@att.net>  
**To:** <trans@metro.dst.or.us>  
**Date:** 11/25/2003 10:20 PM  
**Subject:** RTP update public comments  
**CC:** <halverbk@att.net>

---

Hello,

I would like to submit the following comments for the update of Metro's RTP:

-Policy update: Figure 1.17: Regional Freight System Map - I believe that N Greeley Ave between N Interstate Ave and N Going St was upgraded from a minor truck route to a major truck route during the City's last TSP update.

Project update: #1135 - Frequent Bus service for Line 6 - MLK - this is included as part of TriMet's proposed service plan for 5/1/04 and beyond.

#1138 - Frequent Bus service for Line 75 -

39th/Lombard - this is included as part of TriMet's proposed service plan for 5/1/04 and beyond.

#4001 - Frequent Bus service for Line 72 -

Killingsworth - this is included as part of TriMet's proposed service plan for 5/1/04 and beyond.

#1146 - Greeley Bikeway - construction is underway but not yet completed

I have not confirmed these discrepancies with the City of Portland or TriMet so I request that you do so. Please accept my apologies if I am in error.

I would appreciate a response regarding my questions if possible.

Sincerely,  
Brad Halverson  
4227 N Court Ave  
Portland, OR 97217-3407

**METRO**

November 25, 2003

Transportation Policy Advisory Committee (TPAC)  
c/o Metro Planning Department  
600 N.E. Grand Ave.  
Portland, Oregon 97232-2736

Dear TPAC Members

Subject: Periodic Update of Regional Transportation Plan (RTP)

We are requesting that the following five projects be added to the RTP's "Financially Constrained List." The trails are on the Metro Council approved Regional Trails System Plan and Map, and the RTP. These are trail projects that Metro Parks and Greenspaces and local partners are working on together. Four of the five the trail projects are complementary to Metro's 2040 Plan and Centers objectives, and lie within one-mile of Regional Centers and/or Town Centers.

Project:

**Sullivan's Gulch / Banfield Trail Feasibility Study (Regional Trail #37).** This trail which would be on the north side of the freeway would connect the Eastbank Esplanade Trail to the I-205 Bike and Pedestrian Trail. The Central City, Lloyd District Regional Center, Hollywood Town Center and Gateway Regional Center would all be connected by the future trail. Inter-modal transportation connections at LRT stations, particularly the Gateway Transit Center.

Cost:

\$150,000.

Partners:

Portland Parks, Portland Department of Transportation, Portland Development Commission, Sullivan's Gulch Neighborhood Association, PSU Urban Studies and Engineering departments

Project:

**Springwater to Trolley Trail Connection (Regional Trail #30).** Plan, design and construct sidewalks on S.E. 17<sup>th</sup> Ave. between the two trails. Bike lanes currently exist on the street. The project will connect the Springwater Corridor and Three Bridges project to the Milwaukie Town Center and Trolley Trail. The proposed project is within one-mile of downtown Milwaukie.

Cost:

Preliminary Engineering and Design cost of \$200,000. Implementation costs will be determined during the PE phase.

Partners:

City of Milwaukie, City of Portland, Sellwood Moreland Improvement League (SMILE), Friends of the Trolley Trail

Project:

**Mt. Scott Creek Trail (Regional Trail #48).** Feasibility study and cost of trail design and construction, including an under-crossing for the trail at S.E. Sunnyside Rd. Regional trail just east of the Clackamas Regional Center. The trail would connect Happy Valley to Mt. Talbert.

Cost:

Feasibility Study cost of \$75,000. \$692,000 for ROW Acquisition, Design, Preliminary Engineering and Construction of the trail

Partners:

City of Happy Valley

Project:

**Phillips Creek Trail (Regional Trail #32)** Trail loop around Clackamas Regional Center, connecting to I-205 Bike / Pedestrian Trail and the North Clackamas Greenway Trail, following Phillips Creek. Funds needed for trail studies, design, preliminary engineering, and construction.

Cost:

Feasibility Study cost of \$100,000. The study will estimate costs for right of way acquisition, preliminary engineering and construction of the trail.

Partners:

Clackamas County

Project:

**Columbia Slough Trail (Regional Trail #45).** Completion of trail from Kelley Point Park east to Blue Lake Regional Park. Funds needed for acquisition of rights of way and easements; trail design, preliminary engineering and construction.

Cost:

Feasibility Study cost of \$150,000. Implementation costs to be estimated following the completion of the study.

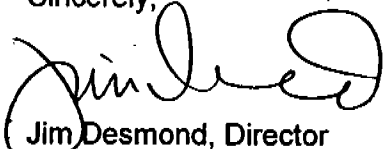

Partners:

City of Portland Parks, Portland Bureau of Environmental Services, Portland Development Commission, Port of Portland, Columbia Slough Watershed Group

If you have any questions or need more information on these proposed additions to the "Financially Constrained" List in the RTP, please contact: Mel Huie, Regional Trails Coordinator at (503) 797-1731 or Heather Nelson Kent, Planning and Education Manager at (503) 797-1739.

Thank you for your consideration.

Sincerely,

Jim Desmond, Director  
Metro Regional Parks and Greenspaces

## **MEMORANDUM**

Date: November 25, 2003  
To: Kim Ellis, Metro  
From: Robin Katz  
Re: Port's Comments on 2004 RTP Project Update (October 31, 2003)

The following comments are in response to the 2004 Regional Transportation Plan Project Update (October 31, 2003), Section 2. The numbers refer to projects.

**2070 - add**

The new 2070 is distinct from the old project, which was ODOT's "Widen I-205 SB on-ramp at Airport Way" for \$10 million (preferred system) in 2016-2025.

**4019 - delete**

There is no plan for another LRT station in PIC or for realigning track there. New 4060 is the correct LRT realignment project - to occur with future PDX terminal expansion east.

**4029 - change**

This project should occur in 2004-09.

**4030 - change**

This project is in the Columbia Corridor, not PDX IA.

**4037 and 4015 - combine**

These projects should be combined per direction from the City of Portland.

**4038 - change**

The project cost is \$790,000.

**4045 - change**

This project should occur in 2004-09.

**4060 - change**

This project should occur in 2010-15.

**4085 - change**

The project cost is \$350,000.

**4086 - change**

This project should occur in 2004-09.

11/26/03

To: Metro's Transportation Plan

From: Victoria Green, chair, Hayden Island Neighborhood Network (HiNoon)

To whom it may concern,

I have many concerns about your plans for Hayden Island. These include a railroad switching yard, and a bridge to the island from Marine Drive.

I join all of the North Portland neighborhood chairs in expressing my frustration with the I-5 Trade Corridor Study and their findings that would expand the existing lanes, and urge traffic to use I-205.

We want the bridge to go all the way across the Columbia River, and not stop at Hayden Island. We believe your plan would create a traffic nightmare, especially during the busy holiday shopping season at Jantzen Beach Mall.

Please read the enclosed letter from all the North Portland neighborhoods, who join the entire Columbia Blvd. business corridor, and the Ports of Vancouver and Portland.

We would like a reply back.

Thanks so much,

Victoria Green,  
Chair, HiNoon

Executive Director  
Identity Clark County  
Phone: 360-695-4116

---

To: TPAC  
November 26, 2003 Meeting

## **The Project Name & Description:**

The Vancouver Rail Bridge Project is to replace the existing "swing span" with a "lift span" and place it closer to the middle of the river.

## **Estimated cost:**

The Coast Guard estimated the cost at \$42 million.

## **Fund Source:**

Highway Trust Funds (Bridge Discretionary Fund), as a Demonstration Project.

We are seeking funding from sources that are separate from the funding sources used to forecast the financially constrained RTP.

We hope to arrive at a funding strategy that does not negatively impact the JPACT "financially constrained system" funding forecasts, yet remains within JPACT's priority recommendations. Thus we will likely seek Highway Trust Funds through the Bridge Discretionary Fund and as a Demonstration Project for a nationally significant freight corridor, where we resolve difficult freight mobility and safety problems at an important multi-modal intersection of that corridor.

Jerry Grossnickle (503-289-3046)

To: Bi-State Committee on Transportation  
October 23, 2003 Meeting

## The Request

We are asking the Bi-State Committee to recommend to JPACT and to the S.W. Washington RTC that the Vancouver Rail Bridge Project be included in the Financially Constrained System as a priority of the Regional Transportation Plan.

## The Project

The project is to replace the existing "swing span" with a "lift span" and place it closer to the middle of the river.

## The Problem

1. **Opening Too Narrow.** The current opening is too narrow. At less than 200 feet wide, it was built (in 1908) to handle much smaller paddlewheel-type freight vessels; today's tows are often over 600 feet long and over 80 feet wide. If there is current, wind or fog, passage can be very difficult.
2. **Too Close to I-5.** The navigational difficulties for downbound tows are compounded by the nearby I-5 bridge. The distance between the bridges is barely adequate to allow the difficult maneuvers required to safely negotiate the bridge openings. Although the rail bridge opening is reasonably well lined up with the I-5 lifts (both are near the Washington shore), captains do not call for these lifts when they can be avoided, nor are they allowed to use them during the peak traffic periods of morning and evening "rush hour" (6:30-9 AM and 2:30-6PM). So they usually navigate under the I-5 bridges' higher spans toward the middle of the river, which require tows to make a difficult "S" turn to line up with the narrow rail bridge opening. This maneuver becomes more dangerous as river levels rise and currents increase. When the river reaches 6 feet at the Vancouver gauge, the maneuver (through the high span) becomes too dangerous, and captains use the I-5 lifts. In years of high

run-off, the river can remain above 6 feet for 6 or 7 months at a time.

Bi-State Committee

October 23, 2003

Page 2

3. **Increasing Danger.** The dangers to tug & barge tows from a miscalculated maneuver are obvious and immediate, with the possibilities for loss of life and property a constant consideration for towboat captains. With increasing I-5 traffic, there has been increased pressure on captains to avoid using the lifts, and in 1999 the Coast Guard extended the length of rush-hour closures of the lifts. Thus the danger of a miscalculation has steadily increased. If a tow were to hit and disable the rail bridge (the closest alternative is east of The Dalles, at Wishram), the cost to the regional economy could be enormous.

### **The Benefits of a Relocated Lift Span**

1. **Ease Navigation.** If a rail bridge lift span is placed nearer the middle of the river, towboat captains will be able to use the higher spans of the I-5 without making the dangerous "S" turns to line up with the opening.
2. **Wider Opening.** The lift span would be about 300 feet wide if it were placed on current pier structures, making it a much safer opening for marine traffic.
3. **Faster Opening.** A lift opening could be made considerably faster than the present swing opening, resulting in less disruption to rail traffic.
4. **Avoid I-5 Lifts.** A lift opening placed more toward the middle of the river would allow marine traffic to nearly always avoid using the I-5 lifts. WSDOT calculated that the current average annual cost of lifts in I-5 traffic delay is about \$0.8 million and will steadily increase to a projected cost of \$12 million by 2021. Currently a lift causes about 20 minutes in midday traffic delay, but by 2021 the midday delay could exceed 90 minutes.
5. **Part of Existing Plan.** The project is part of an existing regional plan for improving I-5 freight and traffic mobility, for it is included in the Final Recommendations of the I-5 Trade and Transportation Partnership Strategic Plan. Although the Partnership study focused on the highway traffic problems of the I-5 corridor, it concluded that a modification of the rail bridge would have important positive impacts on traffic and freight mobility within the I-5 corridor.
6. **Planning for New I-5 Bridge.** The proposal would permit planners of a new I-5 crossing much greater flexibility, for the lifts at the north end of the bridge could be eliminated. This would result in lower construction costs and would

eliminate a large annual budget currently allocated to lift operations and maintenance. Removal of the lift towers would also increase safety for aircraft using the nearby Pearson airfield.

Bi-State Committee

October 23, 2003

Page 3

7. **A Third Track.** A new lift could be designed that would be able to accommodate a third track, if and when a third track is added to the bridge.

### **Cost**

Truman-Hobbs officials assumed the project would cost about \$42 million. This assumption was based on an unrelated study by SW Washington RTC for adding a third track to the bridge, and was considered relevant because it also contemplated adding a lift. However, the figure must be considered an educated guess, rather than resulting from an actual cost analysis. (Contact Bill Burgel [503-423-3728] at HDR Engineering, for information.)

### **Funding Considerations**

1. **Truman-Hobbs.** The CRTA initiated a "Truman-Hobbs" proceeding in 1999 to have the Coast Guard declare the rail bridge an "unreasonable hazard to navigation," thereby making it eligible for a federally funded modification under the Truman-Hobbs Act. In early 2003, the Coast Guard finally decided that the project did not meet the cost/benefit requirements of its regulations, partly because the bridge has not been hit often enough, and partly because the benefits to I-5 traffic could not be considered. The Coast Guard was also prevented by its regulations from considering the increasing danger of future accidents (which are inevitable, according to towboat captains' testimony) because of I-5 lift restrictions. Nor could the Coast Guard consider the massive disruption to freight movement that is likely to result from a major incident at the bridge, or the national security implications of such a disruption.
2. **Falling Through the Cracks - The Funding Conundrum.** The rail bridge project is truly multi-modal. It has significant benefits for marine safety as well as for highway traffic and freight mobility, and it also provides some benefits to rail from a faster opening (and even a potential benefit to air traffic safety at Pearson). But with the failure of Truman-Hobbs, there appears to be no single agency, federal or state, with the ability to take on the project and provide the funding. The bridge is private property, after all, and is not within the traditional jurisdiction of any highway department (even though they are now called transportation departments), and although the railroad owner is subject to the oversight of the Federal Railroad Administration, the FRA has

no legal ability to order a rail improvement for the primary benefit of marine and highway traffic. The Coast Guard has the legal ability to order a rail bridge improvement for the benefit of marine safety, but cannot use highway benefits in making its cost/benefit analysis to justify such an order.

Bi-State Committee

October 23, 2003

Page 4

3. **The Solution – Congressionally Mandated Truman-Hobbs.** However, Congress can declare on its own that the bridge is an unreasonable hazard to navigation, and it can direct the Coast Guard to apply Truman-Hobbs procedures. This has been done for other bridge projects. Thus, the Coast Guard would conduct the engineering study, do the EIS, and contract the entire project from beginning to end. The Coast Guard's Truman-Hobbs director at headquarters has indicated that their Congressional liaison office will work with our Congressional representatives to properly craft the necessary legislation. However, considering the benefits to I-5 traffic (as well as benefits to Amtrak and other federally supported rail projects from the new lift), funding would come from sources other than Truman-Hobbs, for which it technically does not qualify and which currently lacks sufficient funding in any event.
4. **SAFETEA** is the funding vehicle we would like to target to provide federal dollars for the project. To achieve funding under SAFETEA, we seek the support of the various transportation committees in both states, particularly the Bi-State Committee, JPACT and the SW Washington RTC.

### **Project Support**

In addition to support from the maritime community (CRTA, Columbia River Pilots, Port of Vancouver, Port of Portland, Pacific Northwest Waterways Association) and the Vancouver business community (Identity Clark County), the project received official support at the Truman-Hobbs hearing from the following:

Senators Patty Murray, Maria Cantwell, Gordon Smith and Ron Wyden  
Representatives Brian Baird, Earl Blumenauer, Peter Defazio, Darlene Hooley, Greg Walden and David Wu

WSDOT, ODOT, City of Portland, Metro

We expect support from these and others in our effort to seek funding for the project under a modified Truman-Hobbs approach, and have begun discussions with Congressional staffs about crafting the appropriate legislation.

## North Portland Neighborhood Services

November 28, 2003

Rex Burkholder  
Metro Councilor, District 5  
600 NE Grand Ave.  
Portland, OR 97232

Dear Councilor Burkholder:

As Chair of the Hayden Island Neighborhood Network, I have been authorized to write on behalf of the North Portland Neighborhood Associations:

Over the past year, the Bi-State I-5 Partnership has been pursuing options to alleviate traffic congestion on the I-5 Corridor. The group's suggestion is to widen the existing bridge.

The North Portland Neighborhood Associations think that just adding capacity to the existing Interstate Bridge does not solve the immediate or future needs of the greater regional area. Increasing capacity on I-5 burdens the communities along the corridor, and does not solve our congestion problem. Also, as safety becomes more of a concern to all types of commerce and freight movements, just widening I-5 leaves us in a very unstable situation.

**By putting another bridge across the Columbia River from Marine Drive at Portland Road to the Port of Vancouver we can help remove heavy freight congestion off the I-5 Corridor and direct it to where it needs to go – fast, efficiently and safely.**

As economies move to a more "deliver on order" commerce, we must be able to transit freight quickly. Global market growth in the container business is anticipated to have container volumes doubling or tripling over the next decade. In reviewing the broader themes, it is apparent that freight has unique characteristics when compared to passenger traffic. But the improvement of freight productivity warrants examining the linkages between both the main system miles and freight facilities. \* The current National Highway System International Connectors Infrastructures constraints are:

- Poor physical conditions
- Orphan status
- Inadequate coordination of investment strategies

**\*\*The Portland Development Commission agrees, saying the lack of inter-modal freight connections is the number one constraint to business investment in Portland after fears about the Superfund designation.**

By building freight priority passageways we can alleviate congestion and risk while improving commerce and freight movement through the industrial areas and ports, both northern Oregon and southern Washington. This is what the I-5 Trade Corridor Study was created to do.

November 28, 2003  
Page 2

**The North Portland Neighborhood Associations join the Columbia Corridor Business Association, the Pacific NW International Trade Association, and the Ports of Vancouver and Portland in recommending inclusion of study of a west side arterial bridge over the Columbia River between the Ports in the I-5 Trade Corridor Study.**

Sincerely,

Victoria Green

# MEMORANDUM

*Transportation Planning  
Community and Economic Development Department  
City of Gresham*

December 2, 2003

TO: Kim Ellis, Metro  
FROM: Ron Papsdorf, Principal Transportation Planner  
RE: 2004 RTP Update

---

In reviewing the October 31, 2003 public review materials for the Regional Transportation Plan update, it appears that a few of the project changes for Gresham are not properly reflected. These changes were included in the East Multnomah County submittal of October 20. That original submittal is attached for reference. The projects that need to be corrected are:

2047 - Division Boulevard - project limits and cost  
2027 - Civic Neighborhood LRT Station/Plaza - cost  
2014 - Glisan Street Bikeway - project limits and cost  
2057 - Gresham RC Pedestrian Improvements - cost  
new - MAX Path, Ruby Junction to Cleveland Station (\$2m)  
2048 - Burnside Blvd, Wallula to Hogan - add to FC system  
2028 - Powell Blvd - cost

Please feel free to contact me if you have any questions or need further information.

December 2, 2003

**Metro Council**

600 NE Grand Ave.  
Portland, OR 97232-2736

**SUBJECT: Metro Council Public Hearing on RTP Update**

I am pleased to write this letter in support of the placement of the Sullivan's Gulch / I-84 Trail Feasibility Study on the RTP's "Financially Constrained" list.

Along with one of our graduate students in urban studies and planning, I have had the pleasure of meeting with staff from Metro Parks and Greenspaces and the City of Portland to develop a scope for a short-term class project for civil & environmental engineering undergraduate students at Portland State University. We are looking forward to connecting our students' educational experience with a real world project led by Metro and the City. We hope that in some small way our students' analysis can contribute to the overall success of the Feasibility Study.

The PSU Center for Transportation Studies is pleased to be working with Metro and other agency partners on this and other important projects in our region. Please do not hesitate to contact me at 503-725-4249 if you need any additional information.

Sincerely,

**Robert L. Bertini, Ph.D., P.E.**  
Director  
Center for Transportation Studies

# PORTLAND PUBLIC SCHOOLS

CLARENDON SCHOOL

Office of the Principal

December 2, 2003

Metro Regional Center  
600 NE Grand Ave.  
Portland, OR 97232-2736

Dear Metro:

Clarendon Elementary is located two blocks south of Columbia Boulevard and two blocks west of Portsmouth Boulevard.

We are concerned with the shifting of non-local truck traffic from Lombard to Columbia Blvd. We know that Lombard had one of the highest fatality rates in the state, and we worry that this shift will increase the danger to our children crossing Columbia Blvd. to get to our school.

The problem is that we do have a light to help us cross at Portsmouth and Columbia Blvd., but it is located at the top of a hill and is on a blind curve coming from the east. We would like to ensure that our children's crossing is appropriately labeled with school crossing signs, that trucks are aware of the need to stop at our stop signs and lights and that they watch for children, especially before, during and after school hours.

We see that your plan calls for education and enforcement of existing regulations and a truck-signing program. We think that it is important for you to follow through on these promises to keep our children safe.

Sincerely,

Antonio Lopez  
Principal

Sylvia Evans  
PTA President

and the School Site Council

**Subject: RTP freight routes**

**Date:** Wednesday, December 3, 2003 2:26 PM

**From:** Weinman, Ron <ronw@co.clackamas.or.us>

**To:** 'Kim Ellis' ellisk@metro.dst.or.us

**Cc:** "Skidmore, Ron" ronsk@co.clackamas.or.us

Kim,  
Clackamas County is recommending that McLoughlin Blvd be changed as follows

\* Mc Loughlin Blvd. (Hwy 224 to I-205 south ramps) - Clackamas  
County/Milwaukie/Gladstone

ACTION - Change the "Main Roadway Route" designation to "No  
Designation" "Road Connectors"

The reasons for these recommendations are

1. The route is one of the main routes between Oregon City, Gladstone and Milwaukie.
2. There are industrial properties throughout the Corridor with the largest being an area near Roethe Road of about 80 acres.
3. The area adjacent to McLoughlin is a major destination for freight. It serves everything from industrial to retail including a major auto sales area.
4. McLoughlin Blvd would be an alternative for traffic including freight when Highway-224 and I-205 is closed or congested do to incidents on this route.

My suggest is to leave the designation as is and plan on reviewing the classification as part of the major update that is expected to start within the next year. As mentioned, if a change is necessary I would recommend that McLoughlin Blvd be down graded to a Road connector.

## MEMORANDUM

To: Tom Kloster, Kim Ellis - Metro  
From: Laurel Wentworth, <sup>LN</sup> Chief Transportation Planner  
Subject: Recommendation on the draft 2004 RTP Update

Thank you for the opportunity to comment on the proposed amendments to the RTP. Other memos from PDOT address technical changes to classifications and projects. This memo raises the question of whether proceeding with the more significant proposed changes to the RTP are wise at this time. We share Washington County's concerns that this is too much change in a very constrained timeframe without adequate opportunity for review and comment. While not ideal, adopting an interim RTP for federal air quality purposes may better serve Metro and local jurisdictional needs at this time.

The points in support of this position are summarized below:

1. The RTP update references a new 2025 population and employment forecast (Page 6-13, Technical Update) that has not been evaluated by local jurisdictions. Local jurisdictions are required to use this forecast for purposes of TSP updates, including planning studies that amend TSPs. Making the change noted could be seen as a level of acceptance for a forecast that does not yet exist and could cause confusion for current planning projects.
2. Dropping the Priority System at this time is not a minor change. Portland has been using the Priority System for planning purposes since the adoption of the RTP. As noted on Page 6-58, Technical Update (New Section 6.8.15), moving to either the Financially Constrained or Preferred System for planning purposes can lead to significant underestimating or overestimating the available transportation system over the next 20 years. Moving to either system for planning purposes needs to be addressed, as the commentary in section 6.8.15 says, "in detail to ensure a balance between allowing desired development and preventing land use actions that outstrip the public ability to provide transportation infrastructure."
3. Making the changes proposed would require complete or partial rewrites of several RTP chapters – particularly Chapter 5, Growth and the Priority System. It will be very confusing to not have the entire RTP updated and reprinted to be consistent with the significant changes noted above.

While we appreciate the effort that staff has made to produce a financially constrained RTP that meets federal requirements, it is premature to adopt RTP amendments that will result in such significant changes at this time.

We urge TPAC to recommend the following to JPACT:

- Complete an RTP that will meet federal requirements
- Do not adopt changes to the RTP that include dropping the Strategic System in favor of Financially Constrained and Preferred Systems.
- Direct Metro staff to establish a work program that will provide for a comprehensive update of the RTP.

**MEMORANDUM**

To: Tom Kloster, Kim Ellis - Metro  
From: Deena Platman, Transportation Planning  
CC: Laurel Wentworth, John Gillam  
Subject: Requested changes to the draft 2004 RTP Policy and Project Update

After further review I have a few additional changes to the draft documents.

**1 - Policy Update**

- Add N Greeley Avenue between N Interstate Avenue and N Going Street as a Road Connector on the Regional Freight System map. Portland's TSP identifies Greeley as a Major Truck Street located in a Freight District.
- Delete the Gateway Regional Center from section 6.7.7 Areas of Special Concern. Portland's TSP has addressed this area in accordance with the Transportation Planning Rule. Delete or revise Figure 1.13b Gateway Regional Center -- Special Area of Concern to reflect its current status.

**2 - Project Update**

- Add a new project to the Financially Constrained System:

Project Name: Lombard/St. Louis/Ivanhoe Multimodal Improvements

Segment: St Louis - Philadelphia

Description: Implement signal and pedestrian crossing improvements to improve pedestrian safety and freight flow.

Estimated Cost: \$1.1 million

Timing: 2004 - 2009

Jurisdiction: PDOT

This project implements a portion of the St Johns pedestrian district improvements (#1150). This phase was selected for MTIP funding and should be identified as a stand-alone project in the RTP.

- # 1095 - Union Station Multi-modal Center Study, move project to Financially Constrained System and update cost estimate to \$300,000. This project is a priority for the City of Portland; submitted in the most recent MTIP process and likely to be resubmitted for MTIP funding in the future.

December 3, 2003

**MEMORANDUM**

To: Tom Kloster, Kim Ellis - Metro  
 From: John Gillam, Transportation Planning Division  
 CC: Laurel Wentworth, Deena Platman, Jeanne Harrison  
 Subject: Requested Changes to the draft 2004 RTP Project Update

Upon further review of the draft (10/31/03) 2004 RTP Project List we have a few additional requested changes to this document.

**Project Updates**

Add the following projects to the Financially Constrained System:

1. Project #1173, Hillsdale TC Pedestrian Improvements.

Project Name: Retain same name.

Project Location: Retain same location.

Description: Retain same project description.

Estimated Cost: Retain same project cost.

Program Year: 2010-2015

Jurisdiction: Retain as Portland

Pedestrian and street network improvements for a Town Center warrant inclusion in the Financially Constrained System. This project is identified in the Portland TSP as a mid-term timeframe.

2. Project #1096, Barbur/I-5 Corridor Study.

Project Name: Retain same name.

Project Location: Retain same location.

Description: Retain same project description.

Estimated Cost: Retain same project cost.

Program Year: 2004-2009

Jurisdiction: Retain as Portland

This study is part of the Metro Corridor Initiatives Planning Program and its completion and recommendations will provide improved project definitions for several RTP projects in the vicinity of the Barbur Boulevard/I-5 Corridor. This project is identified in the Refinement Plans and Studies Chapter of the Portland TSP.

3. **New Project for the Capitol Hwy/Vermont/30<sup>th</sup> Ave. Intersection.**

**Project Name: Capitol Hwy/Vermont Intersection Improvements**

**Project Location: Capitol Hwy/Vermont/30<sup>th</sup> Ave. Intersection**

**Description: Provide traffic safety and pedestrian and bicycle facility improvements at this intersection and approaching street segments.**

**Estimated Cost: \$450,000**

**Program Year: 2010-2015**

**Jurisdiction: Portland**

**This project is identified as part of the Capitol Highway Plan adopted by City Council. It was not built as part of the initial street project improvements due to budget limitations. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe.**

**Add the following project to the Preferred System:**

1. **New Project for Capitol Hwy. between Sunset and Barbur**

**Project Name: SW Capitol Highway - Terwilliger Segment.**

**Project Location: Capitol Hwy.: Sunset - Barbur**

**Description: Provide pedestrian and bicycle facility improvements.**

**Estimated Cost: \$910,000**

**Program Year: 2010-2015**

**Jurisdiction: Portland**

**This project is identified as part of the Capitol Highway Plan adopted by City Council. Portions of this project segment are rated as higher priority improvements. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe.**

2. **New Project for Capitol Hwy. between Huber and Stephenson**

**Project Name: SW Capitol Highway – Marquam Segment.**

**Project Location: Capitol Hwy.: Huber- Stephenson**

**Description: Provide improved pedestrian crossings and median design treatments.**

**Estimated Cost: \$750,000**

**Program Year: 2016-2026**

**Jurisdiction: Portland**

**This project is identified as part of the Capitol Highway Plan adopted by City Council. This project is on the regional system and is identified in the Portland TSP as a mid-term timeframe.**

**Delete the following projects from the Financially Constrained System, add to the Preferred System:**

1. **Project #2024, Gateway RC Pedestrian District Improvements – Phase III.**

**Retain all other current project information.**

**This is the last of a three phase implementation schedule of local street network development in the regional center. The first and second phase of this project should remain as is in the Financially Constrained System.**

December 3, 2003

**MEMORANDUM**

To: Tom Kloster, Kim Ellis - Metro  
 From: John Gillam, Transportation Planning Division  
 CC: Laurel Wentworth, Deena Platman, Jeanne Harrison  
 Subject: Allocation Adjustments for Requested Changes to the draft 2004 RTP Project Update

The following provides a summary of allocation adjustments to the Financially Constrained System resulting from our requested project list changes through memos of December 3 from Deena Platman and myself.

Projects added to the Financially Constrained System

Project #1173, Hillsdale TC Pedestrian Improvements	\$3,465 000
Project #1096, Barbur/I-5 Corridor Study	\$1,732,000
New Project, Capitol Hwy/Vermont/30 <sup>th</sup> Ave. Intersection	\$ 450,000
New Project, Lombard/St. Louis/Ivanhoe Multi-Modal Imps.	\$1,100,000
Project #1095, Union Station/Multi-Modal Center Study	<u>\$ 300,000</u>
Subtotal	\$7,047,000

Projects deleted from the Financially Constrained System\*

Project #2024, Gateway RC Ped. District Imps. - Phase III	\$6,930,000
---	-------------

\* Project is added to the Preferred System

As you can see, our adjustments place our requests within \$117,000 of balance. This should be within acceptable estimate range at this level of detail. But if these figures need to exactly balance, then reduce Project #1173 by this amount. Please call me if you have any questions.

-----Original Message-----

From: Don Baack [<mailto:baack@pacifier.com>]

Greater SW Portland is going to be the loser in the latest changes to The Regional Transportation Plans if commissioner Jim Francesconi and the Portland Department of Transportation, PDOT, have their way. Guess what, a huge slush fund, \$80,375,000, for yet to be designed projects associated with the Tram and North MacAdam development will be the winner. The Tram is slated to get \$15 million, and changes to the west end of the Ross Island Bridge are slated to get over \$25 million from the scarce funds that will be spent in the immediate future. That will just be the beginning, notice how the tram costs have doubled in the past month? Is this huge slush fund going to pay for the tram cost over runs?

To pay for the largess in the North MacAdam to encourage development, we are asked to forgo improvements planned long ago and patiently awaiting funding.

The net effect on SW Portland will be a longer wait to get through the light on Barbur at Sheridan just south of I-405, we now must wait for 5 light cycles at the 5-6 pm rush hour, a two lane Front Avenue (Naito Parkway) which will force more traffic onto Barbur, and adversely affect our ability to get downtown to Oldtown, to the Ross Island Bridge and to NE Portland via the Steel Bridge. What will Barbur Blvd be like in this area when Front becomes constricted? We will wait even more signal cycles at Sheridan, we will still walk in the mud along Capitol Highway or worse, not be able to safely walk or bike along Capitol Highway at all. We will not be able to walk along Barbur Blvd for lack of sidewalks. We will not have signals at intersections which are very difficult to negotiate.

How is this grand theft of our transportation dollars happening? PDOT and Metro are in the process of a quick, stealth (there has been no City of Portland public comment opportunity, just a tiny postcard early in October, and the Portland City Council has not approved the changes) updating the Regional Transportation Plan, RTP. The RTP specifies which projects will be funded with federal transportation dollars in the next and subsequent rounds. To get considered in the next 5 years, your project must be on the preferred or financially constrained list. Everything else is eyewash.

I want to explain why I call the Barbur Streetscape Project the silk purse for a sow's ear project. In 1997 and 1998 the Oregon Department of Transportation Department, ODOT, was preparing to resurface Barbur Blvd. ODOT was preparing to address a number of sidewalk and bike lane deficiencies but did not want to install street trees as was required by City of Portland standards. A number of folks in SW Portland objected. The net result was an agreement between the citizens of SW Portland and Charlie Hales, at that time the Commissioner of Transportation, that an urgent study would be done for the bike and pedestrian needs of the entire length of Barbur Blvd, and that funding would follow on a priority basis. The study was completed within 6 months. To date, Tri-Met has funded and built just one small pedestrian crossing. 3 additional pedestrian crossings have been promised.

Until now the funding for the project, 4,620,000 has been on the preferred list. Now it is being dumped into the ignore category and we can put up with no sidewalks, interrupted and dangerous bike lanes for at least 10 years. Really makes you want to trust your government doesn't it.

You will be interested to know that just 2 capital projects have been built in SW Portland in the last 2 or 3 years with a total cost of under \$800,000.

What can we do? We can testify at the 2pm Metro Council hearing on December 4th about our objections to these changes. Ask them to put the following projects on the financially constrained list: 2 Capitol Highway Plan projects, Hoot Owl Corner and Sunset to Terwilliger, the section from Multnomah to Taylor's Ferry is already on that list. Ask them to keep the promises made on Barbur in 1998 and put the entire 4.6 million Barbur Streetscape Project back on the financially constrained list, ask that the signals at SW Multnomah Blvd and Garden Home, SW 62nd and Taylors Ferry, SW Vermont and Capitol Highway at SW 25th, and the bike and ped improvements for BH Highway be on the financially constrained list. Ask that 5 million in funding for the pedestrian crossing of I-5 associated with the tram be broken out as a separate project so that the funds cannot be used for other purposes. Ask that the Newberry and Vermont Bridges on Barbur be put on the list for replacement in 5 years or so to assure the funds are available when these bridges must be replaced. (They underwent temporary repairs 5 years ago and were scheduled to last 10 years from that time.)

Ask that the total funds designated for the I-5, North MacAdam, Ross Island Bridge changes be reduced from the \$80,375,000, (projects 1025, 1027, 1030, 1087 and 1098) currently in the financially constrained budget. Ask that the projects be broken into a number of projects and a portion of them be removed from the financially constrained budget.

You can let Jim Francesconi and the rest of the Portland City Council know what you think of their transportation decisions and spending priorities. We are being screwed and I for one am tired of it. We need a more equitable distribution of transportation dollars. Here are a few facts:

Per the 1999 street inventory information I have: SW has 50.9 miles of substandard arterial street mileage, which represents 45% of the total substandard arterial street mileage in the entire City of Portland. Arterials are streets like Barbur, BH Highway, and Capitol Highway. SW has 144.7 miles of substandard local streets, 35% of the total substandard local streets in the City of Portland. The reason the arterials and streets are classified substandard is mostly due to not having sidewalks.

This is not going to change unless we decide to do something to change it. It will take each of us making our voice heard loud and clear. Join me in objecting to this theft.

Pass this on to your friends and neighbors. Speak up now.

# Southwest Neighborhoods, Inc.

7688 SW Capitol Highway, Portland, OR 97219 (503) 823-4592

December 3, 2003

Metro Regional Center  
600 NE Grand Ave  
Portland, OR 97232

Our coalition of 16 neighborhoods serving Southwest Portland has reviewed the RTP as posted on your website. We have also coordinated our concerns with the Portland Bureau of Transportation planning staff.

- Southwest Portland is behind the rest of the metropolitan area regarding the transportation infrastructure serving the communities. Within Portland itself, 45% of the substandard arterials in the entire city are within Southwest Portland, even though it comprises only about 1/7<sup>th</sup> of the land area. Pedestrian facilities, so important to our school children and our transit system, as well to air quality and personal health, are almost non-existent, with only 15+/-% of the city streets having sidewalks. Priority funding to bring Southwest Portland up to the standard of the rest of the metropolitan area must be provided if progress is to be made to counteract this historic neglect. These improvements can be accomplished in accordance with the Portland Transportation System Plan (TSP) but only if both the City and Metro provide funding.
- Comprehensive project development concept plans have been carried for three major project areas during the past decade in Southwest Portland. These are for Capitol Highway, Barbur Boulevard Streetscape, and South Portland Circulation.
  - Capitol Highway Plan. This is the oldest of these priority plans. Project funding to complete this construction has not been incorporated into the funded portion of the RTP. Specifically, The Portland TSP 90029 and 90070 need to be given immediate funding priority within the RTP, and RTP# 1202 must be retained.
  - Barbur Boulevard Steetscape Plan. This 1999 project to create a series of safer pedestrian crossings as well as construct longitudinal sidewalks along this major trafficway was to have

Arnold Creek • Ashcreek • Bridlemile • Collins View • Corbett-Terwilliger-Lair Hill • Crestwood  
• Far Southwest • Hayhurst • Hillsdale • Homestead • Maplewood • Markham • Marshall Park  
• Multnomah • South Burlingame • West Portland Park

commenced upon plan completion. It hasn't, with only one crossing constructed in 4 years. This project appears to be RTP# 1199. It should have been completed prior to the current reconstruction of I-5 through the corridor and the construction of the ITS system designed to handle the added traffic demands of this corridor, but these projects were funded while the community and personal safety needs were not. Recommend immediate full funding. Note that subsequent studies of this corridor are also being recommended in the RTP, but the value of these improvements will be unaffected the results of those studies.

- South Portland Circulation Plan. This plan is contained in the RTP as #1027, with full funding at \$28,293,000. This is better handled as a series of projects, with those elements adding to the transportation infrastructure, such as the pedestrian bridge over Interstate 5 and the safer access to the Ross Island Bridge receiving priority and funding during the life of this RTP, and the other elements moved to the priority classification.
- In addition to those projects contained within specific plans, we offer comment on the following projects in the Portland TSP or in you your RTP.
  - We strongly support RTP# 1211, Garden Home Road, SW (Capitol Hwy-Multnomah and RTP# 1189, Beaverton Hillsdale Hwy at 62<sup>nd</sup> Ave pedestrian improvements and urge the construction of these in the immediate future. These intersections are extremely dangerous at this time.
  - We urge Metro to consider moving RTP#'s 1176 and 1177 to the 2004-2009 time frame.
  - The recently identified safety improvements (guardrails) to Boonesferry Road and Arnold Street need to be added to both the TSP and RTP.
  - RTP# 1181, "Beaverton-Hillsdale Highway ITS" needs to have its description clarified to "Capitol Highway/Beaverton-Hillsdale Highway ITS". The project location appears to start on Capitol Highway as it includes Terwilliger within the project description. The Beaverton-Hillsdale Highway does not intersect Terwilliger, and the project most likely incorporates the signal at Capitol Highway and Terwilliger. Further, any ITS improvements that project excess traffic must be accompanied by adequate pedestrian facilities when placed in an urban setting such as this. Accordingly, the cost of this project needs to be increased to include the construction of any missing sidewalk and street crossing sections.
  - Key projects for moving traffic through SW Portland have not been included within the 2025 RTP Financially constrained system. These projects would provide relief to the I-5/Barbur/South Portland

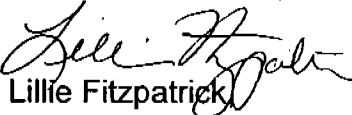

corridor. Specific items that should be brought into the funding umbrella to assure their construction are RTP#'s 1004, 1031, 1195, and 1196.

- Barbur Boulevard structures over Vermont and Newberry, in the vicinity of the northerly Capitol Highway/Barbur intersection. Five years ago ODOT performed emergency repairs to these structures while heavy traffic was detoured through residential areas. They indicated at that time the remaining physical life of these timber structures was 10 years. Reconstruction of these structures, with the addition of appropriate bike and pedestrian facilities, must be included in the immediate time frame.
- Key projects for moving traffic through SW Portland have not been included within the 2025 RTP Financially constrained system. These projects would provide relief to the I-5/Barbur/South Portland corridor. Specific items that should be brought into the funding umbrella to assure their construction are RTP#'s 1004, 1031, 1195, and 1196.

Sincerely,

Glenn Bridger,  
President, SW Neighborhoods, Inc.

# How to Comment on the update to the 2004 Regional Transportation Plan

The public comment period for the 2004 Regional Transportation Plan (RTP) begins on October 31, 2003 and concludes with a public hearing on December 4, 2003. You may submit comments online at Metro's website:

[www.metro-region.org/rtp](http://www.metro-region.org/rtp)

Comments and questions may also be mailed using the form below, or left on Metro's Transportation hotline at (503) 797-1900, Option 2.

## Comments:

Highway 26 (Sunset Highway) Needs AN expansion of at least one lane on each side from Highway 217 interchange west to Cornelius Pass Rd. Building this infrastructure will support Oregon's economic recovery AND increase our ability to move goods, services and people. Clatsop, Columbia & Washington County citizens would benefit significantly with short commute time thus being able to spend more time with their families. Business will benefit with faster delivery times (over)

<input checked="" type="checkbox"/> Please add me to the RTP interested citizens mailing/e-mail lists	

And quicker access to distribution hubs.

The existing infrastructure is over loaded and is a significant bottleneck for commuters, truck traffic AND service vehicles

The new lanes could be designed for High Occupancy Vehicles or for truck traffic only. A final decision for the use of the new infrastructure would require a refinement study to determine the most efficient traffic usage and air quality impact.

Re: Mount Scott Creek Trail Project #48

Dear Councilors:

The Mount Scott Creek Trail was included in 1992 in the Metro Regional Trail plan as Project # 48. A segment of that project in Happy Valley has already been completed. With the completion of the new Sunnyside road bridge over Mt. Scott Creek the time is right to proceed to connect the Springwater trail on the north of Happy Valley with the existing trails on the portion of Mt. Talbert owned by Metro that is located just south of Happy Valley. This trail would allow for bicycle and pedestrian access to extensive trails in both north and south directions from Happy Valley. As you know Happy Valley is in great need of these means to get its residents out of their cars and exercising their bodies. This trail will also provide a very useful means of pedestrian and bicycle access from Happy Valley to the shopping center that is located at 122<sup>nd</sup> and Sunnyside Road. Most importantly this trail will provide the fast growing population of Happy Valley with a trail connection to the premier Metro amenities in the vicinity to Powell Butte via the Springwater Corridor and to Mt. Talbert on the south. Happy Valley is very willing to provide local funds to help complete this trail, but needs the help that will come from adding this trail to the Regional Transportation Plan. The City Council considers this our number one trail priority and we thank you for consideration of helping us complete the trail.

Very Truly

Eugene Grant  
Mayor

RE: RTP Update Public Comments

Dear Ms. Ellis:

The City of Wilsonville has the following comments regarding the draft 2004 RTP Update:

1. Place the entire Wilsonville Road Interchange project within the Financially Constrained list, not just the PE and ROW with construction on the Preferred List. This is important because this project has been identified as a high priority project both by the City and by ODOT, as well as regional and federal partners who participated in ODOT's 2002 Freeway Access Study.

The critical nature of this project is evidence by the City of Wilsonville's commitment of \$3.5 million in the city's current budget to begin Phase 1 of the needed improvements. However, this is a very limited fix to the problems that exist at the interchange and a more comprehensive solution is now moving through the OTIA 3 process as a freight mobility project. Placing the entire project on the Financially Constrained list recognizes the level of significance this project has on the I-5 south metro region and for freight mobility.

In response to the proposed update to the RTP System Maps, the City has attached an updated map of our major freight distribution centers and truck terminals (see Figure 3a). There are several industrial areas in south Wilsonville that utilize the Wilsonville Road Interchange on a daily basis and the importance of improving the interchange for freight mobility and safety can not be emphasized enough.

2. As submitted at the October 29, 2003 TPAC Workshop, the City of Wilsonville has re-evaluated two project priorities since the last update of the financially constrained list and they would include the following changes to the draft 2004 RTP:
  - Remove project #6091, the Boeckman Road/I-5 Overcrossing, from the financially constrained list and move it to the preferred system. The project total in the draft RTP is \$9,890,000.
  - Add project #6093, the Barber Street extension to the financially constrained list. The project total in the draft RTP is \$7,310,000.

As you can see, this would remove a burden of more than \$2.5 million from the financially constrained system. The Barber Street Extension project was determined to be a higher priority project because of its ability to have a greater impact on providing relief to the Wilsonville Road Interchange. This was concluded as part of the *I-5/Wilsonville Freeway Access Study*, which was prepared by DKS Associates in November of 2002 in coordination with ODOT, Metro, and the City of Wilsonville.

Letter to Kim Ellis, Metro

RE: RTP Update

December 4, 2003

Page 2

3. UPDATE Appendix 4 – Transportation Analysis Zone Assumptions, does not list Wilsonville as an Industrial Area (pg. 3) under 2040 Grouping. With Interstate 5 running through the middle of Wilsonville, the City has a significant Industrial land base which utilizes both the Wilsonville Road Interchange and Stafford Road Interchange. The majority of our industrial areas are located near established street and transit routes, therefore the City of Wilsonville should be included as a Tier 1 Industrial area.
4. The City has reviewed the proposed Policy Map Updates and there are several changes to be made to have the maps reflect the City's Transportation Systems Plan. The proposed modifications are summarized in a spreadsheet and shown on several figures attached to this letter.
5. In Appendix 8, under Title 6: Regional Accessibility, Regional Street Designs, the City of Wilsonville should now meet compliance with the adoption of the Transportation Systems Plan.

Thank you for the opportunity to provide these comments on the draft 2004 RTP Update. If you have any questions, please call Danielle Cowan, Public Affairs Director, at (503) 682-1011 or Laurel Byer, Assistant City Engineer, at (503) 682-4960.

Sincerely,

Arlene Loble  
City Manager

Metro Council Meeting

DEC 05 2003

To: Metro Council Members  
From: Jill Fuglister, Coalition for a Livable Future  
Catherine Ciarlo, Bicycle Transportation Alliance

Re: Comments on the 2004 RTP Update

Thank you for the opportunity to comment on the 2004 update of the Regional Transportation Plan. On behalf of the Coalition for a Livable Future and the Bicycle Transportation Alliance, we would like to express our concern about the process of the update. We recognize that Metro is under considerable pressure to meet federally imposed deadlines. However, we believe the public has not been given an opportunity for meaningful involvement in an update that, far from being a "minor" update, will have a tremendous impact on the region's transportation system.

The Coalition for a Livable Future (CLF) is a coalition of 60 community organizations working to protect, restore, and maintain healthy, equitable, and sustainable communities in the greater Portland metropolitan region. The Bicycle Transportation Alliance (BTA) is a non-profit organization working to create healthy, sustainable communities by making bicycling safer, more convenient and more accessible in Oregon. Both organizations support Metro's Region 2040 vision for the Portland metro area as a place where people of all ages, incomes and ability have an array of daily transportation options available to them. We believe that this can only be accomplished by deliberate, strategic investment that ensures the development of complete networks for all modes of travel – including transit, walking and bicycling – as well as motor vehicles.

We are concerned that the current RTP update, in the crunch to meet a constrained timeline, will move the region away from the principles and modal goals set out in the 2000 RTP. Furthermore, the public has not had a meaningful opportunity to understand and comment on these changes. Characterized as a "housekeeping" update, the proposed revisions add over \$1.5 billion in projects to the Financially Constrained list, according to Table 1, *Summary of 2004 RTP Financially Constrained System Project List Changes*.

Despite the scope of these proposed additions, Metro began work on the Air Quality Conformity Analysis on November 3, only three days after the public comment period opened. This raises a critical question: how would the Metro Council and JPACT respond if public comment were to reveal a lack of support for major projects being modeled? Clearly, with air quality modeling well underway, Metro would not be well positioned to respond in any meaningful fashion. Again, we understand that the region is facing tight deadlines with potentially significant effects. However, characterizing the update as "minor" is inaccurate at best.

The heart of CLF's and the BTA's concern about the update centers around the project mode split in the new Financially Constrained System. At the beginning of this RTP update, Metro staff laid out a set of guiding principles and targets that were to drive the update process.

A key goal (driven by the need to keep the region in air quality compliance) was that project mode splits should remain relatively stable in the 2004 RTP Update process.

This goal has not been met. The table below is copied from Metro's public outreach materials, with a final column added. It reveals an 11% increase in road and bridge projects and a 14 % drop in transit dollars.

Distribution of Financially Constrained System Projects

Balancing Modes of Transportation	[TARGET SPLIT]		
	2000 RTP	Draft 2004 RTP	Change
Road and Bridge	35%	46%	+11%
Bicycle and Pedestrian	7%	9%	+2%
Transit Projects	55%	41%	-14%
Boulevard Projects	3%	4%	+1%

While we recognize that the changes result from OTIA III, the availability of state funding should not preempt Metro's planning process. Furthermore, if the region is going to make such a substantial shift away from the mode split outlined in the 2000 RTP, the public should understand that shift and have a meaningful opportunity to comment on it. Again, such a change is hardly "housekeeping."

Recognizing that the region must move forward with this RTP update in order to meet federal deadlines, CLF and the BTA urge the Council to note that the project mix in this update does not reflect a well-thought-out, well-coordinated strategy to achieve a truly multi-modal transportation system.

Looking forward to the next major RTP update, we urge the Metro Council to set a clear goal of achieving a mode split that looks more like that contained in the 2000 RTP – a document developed with extensive and meaningful public involvement. With virtually no public process and little technical evaluation, the current RTP update with its substantially shifted mode split should be considered an interim document. It should not be the basis of future plans.

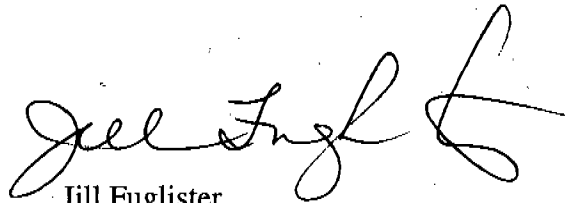

Specifically, CLF and the BTA request that the Council adopt a resolution to use the 2000 mode split as the starting point for the next RTP. Moving forward, we urge you to set even more aggressive targets for transit, bicycle and pedestrian mode shares to guide the next update.

Thank you for your consideration of these comments. We look forward to working with Metro, the region's jurisdictions, and its citizens on the 2006 RTP update.

**RE: METRO REGIONAL TRANSPORTATION PLAN POLICY UPDATE  
PUBLIC COMMENTS**

Dear Mr. Bragdon:

STAFF

Rita Pedersen  
Executive Secretary

Thank you for the opportunity to comment on Metro's Policy Update concerning the 2004 Regional Transportation Plan (RTP). I have taken this occasion to review Metro's updated documents and compared its project highlights and amendments with proposals found in the City's Transportation System Plan (TSP).

I speak to you as the President of SW Hills Residential League (SWHRL) on matters of concern in our neighborhood. The League was established and incorporated in 1969. We are recognized by the City as the official neighborhood association representing Portland's SW Hills neighborhood. That includes the Sunset Highway and the Terwilliger Parkway. Currently we have 23 Directors on our board who represent the various areas of the Neighborhood. We have been *Preserving Our Neighborhood's Heritage For 35 Years*. Today I speak of our neighborhood's future. I think you may know of our neighborhood—it's the one used familiarly by Portland civic leaders as a backdrop for the downtown livability. The Neighborhood is used by all Portlanders and visitors; we welcome that, but it has come with a cost.

The League is disappointed that the Metro Transportation Plan fails to recognize the true needs of the SW Hills. Conversely, Portland's Transportation System Plan continues to identify the Neighborhood's needs as genuine, just as they have done in past years—in their previous Twenty Year Transportation Plan. The problem is the City has not really done anything with the plan, except to construct lots of speed bumps on our neighborhood's streets. I will limit my remarks to two areas of the Metro plan: The Oregon Health Sciences University's (OHSU) Aerial Tram and Highway 26's Sunset Corridor. Metro proposes pumping millions and millions of transportation dollars into these two projects alone.

The OHSU Aerial Tram proposal, which we see you have allocated some \$ 15 million, does not adequately represent the authentic needs of the Neighborhood.

It's not innovative, rather it's elitist. Moreover, Metro should not be in the business of funding a private transportation system. It is noteworthy that many Oregonians have become cynical about the function and cost of big government bureaucracies, like Metro. The League is not a part of that movement. We remain optimistic about the potentials of government in solving problems. However, when Metro seemingly has abundant money to spend on risky, expensive and divisive projects, we pay attention. It is an outrageous waste of our transportation dollars. We strongly suggest deleting this project from Metro's Regional Transportation Plan, placing it reasonably where it belongs, in the Projects Dropped category. This would eliminate a burden of \$ 15 million from the financially constrained transportation system.

The League believes the City's proposal for the OHSU Aerial Tram is not responsive to the true needs of the Neighborhood and that it is irresponsible to use our City's transportation dollars to fund such a venture. OHSU and current city officials have underestimated the importance of cultivating friendly democratic relations with the leaders in our neighborhood system. Lately their theme resembles, "Damn the torpedoes! Full steam ahead!" It's not the Portland Way. SW Hills residents would definitely not identify one our transportation needs as an aerial tram traveling above our streets. It is utterly not needed and it has been a highly divisive issue in all of the neighborhoods located in the OHSU vicinity (Homestead, Corbett/Terwilliger/Lair Hill, Hillsdale and SWHRL). OHSU has become committed to building higher and higher fences in the Neighborhood, mostly beneficial to themselves and their developers. Metro is adding fuel to the fire by proposing it partially fund this private and very expensive private transportation venture. Lastly, on this matter, there exist no compelling reason to build an aerial tram in the Neighborhood and it certainly does not conform to the City's own transportation plan. Portland's Transportation System Plan is highly supportive of making "it more convenient for people to walk, bicycle, use transit and drive less to meet their daily needs. By "transit" we assumed they meant public transportation, not private. The league joins collectively with other neighborhood associations in urging Metro to focus funding on public oriented projects that are highly beneficial to public and neighborhood needs.

Our second area of concern is Highway 26's Sunset Corridor. This is a portrait of a monstrous transportation failure. It's appearance is revolting, its congestion, noise, pollution and injury are legendary, yet Metro continues to propose spending millions and millions of transportation dollars improving this funnel. That is precisely what it is, a transportation funnel, because no matter how many lanes you add or improve, it still must pass through the tunnel entering or exiting the downtown. There's no getting around that fact. It's Paradise Lost and the concrete walls constructed to hold back Mother Nature's landscape resembles something from a dystopian science fiction scene, where humanity is diminished, cast aside to make room for machines. It's about as disastrous as it gets. It's not the future, it's the past and it's a huge failure. Apparently Metro still believes the automobile is indomitable, however there exist urban transportation models that promote the use of public transportation. Rather than perpetuating a poor transportation model, which has wasted enormous amounts of human time and resources the League proposes that a different trajectory be funded, one geared toward viable mass transit and multi-use transit ways for non-motorized travelers. We feel that reasonable progress can be

made toward constructing such transportation models if Metro refocuses the funding and expertise there. Portland needs the leadership to thoroughly prepare us for the future. Sadly Metro's current proposals falls short of meeting this need, as well as failing to address the here and now.

Back in the heyday of the civil rights movement, a wonderful, eloquent speaker, Fannie Lou Hamer, observed that she was sick and tired or being sick and tired. Well, that statement today nicely summarizes how many SW Hills residents feel. We live in an area of the City with no real multi-use transit ways, that are separated from increasingly speeding motor vehicle traffic. Intriguingly, every Twenty Year Plan that comes along identifies the same streets to be improved for a new generation. But it never seems to get done. The City's Transportation System Plan is the latest version of these prospects. In its introduction, City transportation leaders argues that "alternative approaches must be used to ensure integrated, comprehensive solutions." Our neighborhood loves this idea. Many of the streets identified for improvements in this current version have appeared before, so it leave us perpetually wondering what happened during the last twenty years. The streets and project numbers are as follows:

90001 Davenport  
90024 Broadway  
90029 Capitol  
90031 Dosch  
90034 Hamilton  
90038 Humphrey  
90049 Marquam  
90054 Patton  
90063 Sunset

There<sup>are</sup> all there again cited for bicycle and pedestrian improvements. Certainly we would add SW Fairmount Boulevard to the streets identified. Fairmount is a scenic destination for all Portlanders and is long overdue for pedestrian improvements.

In sum, SW Hills Residential League recommends the following:

- \*Delete funding for the OHSU Aerial Tram project
- \*Direct the Metro staff planners to focus their talents on solving the Sunset Corridor's problems in practical and intelligent ways that utilize viable modern models
- \*Direct the Metro staff planners to undertake a comprehensive update of the RTP, coordinating it thoroughly with the City's TSP
- \*Re-direct the millions of dollars these additions will save the regional transportation program toward the "alternative approaches" Portland's transportation experts suggest

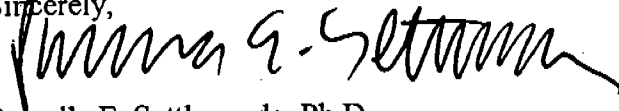

\*Moving up the program years for the SW Hills street projects to 2004-10

SW Hills Residential League supports our City's vision for making our neighborhood's streets safe and friendly for non-motorized travelers. We believe such transportation improvement programs should be a transportation priority at Metro. In the SW Hills, the transportation experts long ago took away the Neighborhood's streetcars, which delivered people efficiently and safely up and down the hills and throughout the downtown. What has evolved are very large, noisy and polluting cars, that travel at very high speeds, up and down our narrow, windy, hilly and scenic streets. It's scary and the majority of people in the Neighborhood recognize this dangerous condition. There's a strong feeling that residents must transport themselves and their loved ones in cars, in order to protect themselves. In a sense, we've become caged birds with our cars and it only exacerbates the problem.

There's a systematic practice of denying Southwest neighborhoods their due. Metro and Portland's decisions in planning priorities have deprived us of safely being able to walk our streets, which remain largely devoid of transit ways for non-motorized people. There needs to be a corrective plan in place that promotes people not their automobiles. Metro's leadership can be the major catalyst for changing these deplorable conditions. Designing, funding and constructing a SW Hills transit way, for all Portlanders to utilize, would reverse the course of past actions.

Thank you for your attention to this very sensitive issue. SW Hills Residential League and our neighbors and friends look forward to working with Metro and City transportation leaders on these proposals in the near future.

Sincerely,

Pamella E. Settlegoode, Ph.D.

RTP # 4076

Re: Support for including the Columbia Slough Trail in RTP

One of my earliest civic activities after moving to Portland in 1991 was taking a community-sponsored walk on the yet-unfinished Springwater Corridor Trail. Over the years I have seen the benefits that this tremendous transportation feature provides to the public.

Metro knows that in order to achieve a balanced transportation system it is important to include multi-use trails in the Regional Transportation Plan. Providing citizens choices other than the automobile is critical to building livable communities. I support this.

I want you to know there is strong support for regional trails in the Columbia Slough Watershed area. In June of this year, after much work, the Watershed Council completed a long awaited Watershed Action Plan. In developing this plan we interviewed business and land owners, and worked with a wide array of community members. Our job, as a Watershed Council, is to encourage the community to implement the Action Plan.

The Action Plan's highest category is called Top Priority. One of our Top Priority projects is: *Completion of the Columbia Slough Trail*. As you may know, portions of the Columbia Slough trail are finished – and if you been on the trail, you know how beautiful it is – but there are many missing links and gaps. A fully-completed trail will provide multiple benefits. For example, there are hundreds of businesses along the Slough. When it is finished I am confident workers will use the Columbia Slough trail to access jobs. There will be access from Interstate MAX, I-205 bike path, and multiple bus routes that cross or travel near the Slough.

The Columbia Slough Watershed Council urges that you add the Columbia Slough Trail to the RTP's financially constrained list. We support this action.

*A feasibility study*  
Thank you very much.

**Subject: TPlan 2000 update comments to go into record. Request for response.**

**Date:** Monday, December 8, 2003 8:01 PM

**From:** Roger M. Ellingson <rogere@rmegen.net>

**To:** Trans System Accounts trans@metro.dst.or.us

Hello,

I am writing to be put on the record for the 2000 transportation plan update review. I am concerned that the regional transportation plan is not taking into account the increased levels of transportation system noise pollution around the metro area and the impact this is having on regional livability.

I have measured the traffic noise pollution levels at my home which is located in a residential area adjacent to SW Barnes Road. The levels exceed the 66-67dBA State of Oregon and Federal guidelines for this type of developed area 50% of the time. 10% of the time the noise levels are twice the standards. The noise peaks due to unmuffled vehicle exhaust routinely exceed 100dBA SPL! All measurements are taken in a position recommended by a Ph.D. noise expert. These problems I have at my home are not unique to the Metro area.

The main noise generators I have observed are 1) unmuffled heavy trucks routinely using illegal exhaust/compression system brakes, 2) increased tire and engine noise due to increasing vehicle speeds both legal and above the legal limit, 3) heavy increases in the number of illegally muffled Harley-davidson motorcycles being operated, 4) huge increases in the number of modified "performance" resonator type exhaust vehicles being driven, 5) poor education, general confusion, and lack of will at the local jurisdiction levels to enforce what few vehicle noise emission laws are currently in force.

According to FHWA documents the main contributors to vehicle noise pollution are medium and heavy trucks. All transportation system planning is based upon these estimates. But the problem with metro and local transportation planning is the lack of enforcement of federal and state motor vehicle noise emission laws. If the laws are not enforced, then transportation system planning does not work either. There needs to be a balance to the overall system. Sound transportation system planning must be based upon sound foundational principles.

Upon further investigation, I and others have found there is no coordination between jurisdictions across the Metro area regarding noise pollution. Some cities have recently updated noise ordinances, but other areas like Washington County where I live have consciously avoided addressing the noise pollution levels from associated traffic impacts for decades. To our knowledge, Metro does not have any policy, knowledge, or understanding of the noise pollution impacts of the transportation system either.

I request that Metro review the current planning being undertaken to account for the items I have pointed out in this letter. I will be looking forward to hearing exactly how Metro and the Joint commission will be addressing this regional livability deficiency and how I can help.

Thank you for responding to this request.

Sincerely yours,

Roger M. Ellingson

MEMORANDUM

TO: Kim Ellis  
Metro

FROM: Ed Abrahamson *EA*  
Principal Planner

RE: Corrections to Regional Transportation Plan (RTP) Project List

A review of 2004 RTP Project Update document revealed a number of Multnomah County projects that required corrections, as follows:

- #2041—257<sup>th</sup> Ave., Division St. to Powell Valley Rd.: Project is included in the Financially Constrained List but was left off the Table 1 summary list.
- #2120—Sandy Blvd. Bike/Ped project: Remove project from Table 1 and RTP
- #2124—Halsey St., 238<sup>th</sup> Ave. to Historic Columbia River Highway: Project is included in the Financially Constrained List but was omitted from Table 1 summary list. Project cost should be changed to \$3,240,000.

If you have any questions or require additional information, please call me at (503) 988-5050 x29620.

**Subject: RTP Amendment Request**

**Date:** Wednesday, December 10, 2003 2:41 PM

**Cc:** "Wentworth, Laurel" Laurel.Wentworth@pdxtrans.org, "Platman, Deena"  
Deena.Platman@pdxtrans.org

Kim: As we discussed on the phone, we want to withdraw our request of Nov. 12 to move project #1199 - Barbur Blvd. Pedestrian Access to Transit Improvements from the Financially Constrained system to the Preferred system. Unlike other larger scale projects planned along the I-5/Barbur corridor, this project is smaller in scope, more flexible in design regarding adjacent land uses and helps implement the Barbur Boulevard Streetscape Plan. These projects are not dependent upon recommendations that may result from the Regional Corridor Planning Program for the I-5/Barbur corridor. Please retain this project in the Financially Constrained system and advance it to the 2004-2009 timeframe.

Subject: Comments on RTP 2004 12/10/2003

December 10, 2003 4:15 pm.

I have the following comments on the RTP 10/31/2004 draft as it relates to SW Portland. The numbers refer to the Project List #.

First of all, please pass a resolution requiring each member city to adopt the amendments to the RTP after a suitable previously announced comment period to permit the citizens of each of these cities an opportunity to comment and make their views known. The current game rules make it an insiders game and not what we the citizens need or want.

1095 Barbur Blvd multi-modal improvements 15,000,000. This project was promised to SW Portland in lieu of having much of it done by ODOT when Barbur was re paved in 1999. We were promised it would be receive funding priority. That promise should be kept. The Barbur Corridor Study is desired to identify the new southbound on-ramp prior to Capitol Highway South, and the changes needed at Capitol Highway and Barbur.

1193 could be put off for a few years until 1096 the I-5 Barbur 405-217 Corridor is complete. It is my understanding that 1096 is in the financially constrained alternative. If it is not, it needs to be made a part of the constrained system. It is key to many changes in SW Portland.

Cannot find: Earthquake retrofitting for the bridge on Capitol Highway over SW Bertha Blvd, repairs or replacement to Vermont and Newberry Structures (Bridges) on Barbur just south of the north connection with I-5. They should be in the plan.

North MacAdam: A huge pile of money is proposed for this area including Naito Parkway, connections to the Ross Island Bridge, etc. No attention has been paid to the direct connections to I-405, I-5 while much attention has been directed to getting the spaghetti out of the east end of the Ross Island Bridge. The direct connections to the freeways are the logical next steps in implementing the North MacAdam plan, not messing around with the traffic that will not be there when the direct connections are completed. Make this project a top priority, taking funds from all the other projects designed to enhance North MacAdam.

Pedestrian bridge over I-5 and adjacent streets associated with the North MacAdam project should be specified as such to make sure the funds are not diverted to another project. I understand it is a \$5,000,000 or so project.

2004 RTP UPDATE

# Summary of Recommendations on Public Comments Received

December 5 – December 10, 2003

## Consent Items

### PACKET 1 – POLICY UPDATE

No additional comments received.

### PACKET 2 – PROJECT UPDATE

Comment 131: Add Project #2041 (257th Avenue improvements) to the Table 1 summary of financially constrained system changes. Project is included in the Oct. 31, 2003 financially constrained project list, but is not shown on Table 1. (Multnomah County, 12/09/03)

Staff Recommendation: Agree. Amend as requested.

Comment 132: Add Project #2124 (Halsey St. improvements) to the Table 1 summary of financially constrained system changes. Project is included in the Oct. 31, 2003 financially constrained project list, but is not shown on Table 1. Update project cost to be \$3,240,000. (Multnomah County, 12/09/03)

Staff Recommendation: Agree. Amend as requested.

Comment 133: Delete Project #2120 (Sandy Boulevard improvements) from the Table 1 summary of financially constrained system changes. This project is not included in the Oct. 31, 2003 financially constrained project list, but is shown on Table 1. (Multnomah County, 12/09/03)

Staff Recommendation: Agree. Amend as requested.

Comment 134: Withdraw request of November 12, 2003 (Comment #38) to remove Project #1199 - Barbur Boulevard Pedestrian Access to Transit Improvements from the Financially Constrained System. Unlike other larger scale projects planned along the I-5/Barbur corridor, this project is smaller in scope, more flexible in design regarding adjacent land uses and helps implement the Barbur Boulevard Streetscape Plan. These projects are not dependent upon recommendations that may result from the Regional Corridor Planning

Program for the I-5/Barbur corridor. Retain this project in the Financially Constrained system and advance it to the 2004-2009 timeframe. (City of Portland, 12/10/03)

Staff Recommendation: Agree. Amend as requested.

Comment: 135: Project #1095 (Barbur Blvd multi-modal improvements). This project was promised to SW Portland in lieu of having much of it done by ODOT when Barbur was repaved in 1999. That promise should be kept. The Barbur Corridor Study is desired to identify the new southbound on-ramp prior to Capitol Highway South, and the changes needed at Capitol Highway and Barbur. (Don Baack, 12/10/03)

Staff Recommendation: See Recommendation in Comment #134. This project will be included in the financially constrained system.

Comment 136: Project #1193 could be put off for a few years until 1096 the I-5 Barbur 405-217 Corridor is complete. It is my understanding that 1096 is in the financially constrained alternative. If it is not, it needs to be made a part of the constrained system. It is key to many changes in SW Portland. (Don Baack, 12/10/03)

Staff Recommendation: No change recommended. Project #1096 is not in the financially constrained. Other corridors have been identified as higher priorities at this time.

Comment 137: Add a project to complete earthquake retrofitting for the bridge on Capitol Highway over SW Bertha Blvd, repairs or replacement to Vermont and Newberry Structures (Bridges) on Barbur just south of the north connection with I-5. (Don Baack, 12/10/03)

Staff Recommendation: See TPAC Recommendation to Comment 125.

Comment 138: A lot of money is proposed for the North Macadam area including Naito Parkway, connections to the Ross Island Bridge, etc. No attention has been paid to the direct connections to I-405, I-5 while much attention has been directed to getting the spaghetti out of the east end of the Ross Island Bridge. The direct connections to the freeways are the logical next steps in implementing the North Macadam plan, not messing around with the traffic that will not be there when the direct connections are completed. Make this project a top priority, taking funds from all the other projects designed to enhance North Macadam. (Don Baack, 12/10/03)

Staff Recommendation: See TPAC Recommendation to Comment 124.

Comment 139: Pedestrian bridge over I-5 and adjacent streets associated with the North Macadam project should be specified as such to make sure the funds are not diverted to another project. I understand it is a \$5,000,000 or so project. (Don Baack, 12/10/03)

Staff Recommendation: No change recommended. Project #1200 is not proposed to be included in the financially constrained at this time. Other priority projects have been included for this area.

## PACKET 3 – TECHNICAL UPDATE

*2004 RTP Update*

*Summary of Recommendations on Public Comments Received: December 5, 2003 – December 10, 2003*

Comment 140: Do not make changes recommended in Section 6.2 (Demonstration of Compliance with State Requirements) based on TPAC recommendation in Comment #1, and provide clarifying language in introduction and Section 6.1 (Demonstration of Compliance with Federal Requirements) that this update will only address federal planning requirements. (Metro staff, 12/10/03)

Staff Recommendation: Agree. Amend as requested.

## OTHER

Comment 141: The RTP update has not adequately addressed increased levels of noise pollution due to transportation. The main noise generators I have observed are 1) unmuffled heavy trucks routinely using illegal exhaust/compression system brakes, 2) increased tire and engine noise due to increasing vehicle speeds both legal and above the legal limit, 3) heavy increases in the number of illegally muffled Harley-davidson motorcycles being operated, 4) huge increases in the number of modified "performance" resonator type exhaust vehicles being driven, 5) poor education, general confusion, and lack of will at the local jurisdiction levels to enforce what few vehicle noise emission laws are currently in force. The lack of enforcement of federal and state motor vehicle noise emission laws is the main problem with regional and local planning. (Roger Elligsen, 12/8/03)

Staff Recommendation: No change recommended. Noise ordinances are regulated and monitored locally. This comment will be forwarded to local governments.

## STAFF REPORT

### IN CONSIDERATION OF RESOLUTION NO. 03-3380A, FOR THE PURPOSE OF ADOPTING THE 2004 REGIONAL TRANSPORTATION PLAN AS THE FEDERAL METROPOLITAN TRANSPORTATION PLAN TO MEET FEDERAL PLANNING REQUIREMENTS

---

Date: December 10, 2003

Prepared by: Kim Ellis

#### PROPOSED ACTION

This resolution would adopt the 2004 Federal update to the Regional Transportation Plan (“Federal RTP”) as the federal metropolitan transportation plan and would bring the RTP into compliance with the Clean Air Act and federal planning requirements, pending approval of Resolution No. 03-3382 (the 2004 RTP/2004-07 MTIP Air Quality Conformity Determination). Metro is not required to update the regional transportation plan for state planning purposes until 2007.

The Federal RTP, included as Exhibit “A,” contains:

- Policy Packet (Part 1) – Chapter 1 of the Regional Transportation Plan (RTP) presents the overall policy framework for specific transportation policies, objectives and actions identified throughout this plan. It also sets a direction for future planning and decision-making by the Metro Council and the implementing agencies, counties and cities.

The Policy Packet includes the proposed policy amendments for the Federal RTP, which includes changes to several transportation system maps in Chapter 1 and changes to Chapter 1 policy text to establish two tiers of industrial areas (“regionally significant” and “local”) for the purpose of transportation planning and funding. The updated system maps include a number of “housekeeping” amendments that reflect fine-tuning of the various modal system maps. Many of these amendments were recommended by local cities and counties as part of local transportation plans adopted since the last RTP update in August 2000. In addition, a new map that identifies the Metropolitan Planning Organization (MPO) Planning Boundary is proposed to be added to Chapter 1 of the RTP. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes.

- Project Packet (Part 2) - The Project Packet includes an updated Financially Constrained System that will be eligible for state and federal funding and a larger “Illustrative System” that identifies the 20-year transportation needs for the region. As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. This packet incorporates new projects recommended in local transportation plans or corridor studies adopted since 2000 and endorsed by Metro as “friendly amendments” as part of the local review process. The updated financially constrained system is required for federal planning purposes, serves as the basis for a conformity determination with the federal Clean Air Act that will be addressed through a separate Resolution No. 03-3382. Projects that have been added to the Federal RTP and that are not included in the 2000 RTP priority system would require compliance with statewide planning goals through a separate amendment to the 2000 RTP Priority System prior to construction,
- Technical Packet (Part 3) - The Technical Packet incorporates technical changes to the Chapter 6 of the RTP that delete technical requirements that have been addressed through recently adopted

corridor studies and frame future work that must still be completed as part of future updates to the Federal RTP.

### EXISTING LAW

Metro is required to complete a periodic update of the Regional Transportation Plan (RTP) in order to maintain continued compliance with the federal Clean Air Act. The U.S. Department of Transportation (DOT) and the U.S. Environmental Protection Agency (EPA) approved and acknowledged the 2000 RTP air quality conformity determination on January 26, 2001. Under federal regulations, the RTP must be updated every three years to ensure that the plan adequately addresses future travel needs and is consistent with the federal Clean Air Act. As a result, a new plan demonstrating conformity with the Clean Air Act must be approved and acknowledged by US DOT and US EPA in a formal conformity determination by January 26, 2004, when the current US DOT/US EPA conformity determination for the 2000 RTP expires. If the conformity determination expires, the plan is considered to “lapse,” meaning that federally-funded transportation improvements could not be obligated during the lapse period. This consequence would apply to engineering, right-of-way acquisition or construction of any federally funded or permitted transportation project, except those defined as exempt because they do not have the possibility of increasing vehicle emissions.

Because the 2000 RTP was the result of a major update and was completed relatively recently, the Federal update to the RTP represents a minor effort that was limited to meeting state and federal requirements, and incorporating new policy direction set by Joint Policy Advisory Committee on Transportation (JPACT) and the Metro Council as part of various corridor and special studies adopted since 2000. The update also incorporated a number of “friendly amendments” proposed as part of local transportation plans adopted since 2000.

In addition, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Area Boundary. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes. The boundary includes the area inside Metro's jurisdictional boundary, the urban growth boundary and the 2000 census defined urbanized area boundary for the Portland metropolitan region. A new map has been added to chapter 1 of the RTP to meet this requirement.

### FACTUAL BACKGROUND AND ANALYSIS

The most pressing need for this update to the RTP is continued compliance with the federal Clean Air Act. Most of the federal requirements only required minor revisions to the RTP in order to maintain compliance. The more involved efforts involve the requirement for a “financially constrained” plan and demonstration of conformity with the federal Clean Air Act. The conformity finding is based on the projects that make up the “financially constrained” plan. The financial constraint exercise consists of developing a projection of reasonably expected transportation funding over the 20-year plan period, and selecting a subset of projects from the plan that fit within this “constraint.” The financially constrained system of projects is then evaluated to determine whether implementation of the projects would violate the federal Clean Air Act.

In October 2003, Metro staff worked with members of the Transportation Policy Alternatives Committee (TPAC) and other interested parties to develop a comprehensive inventory of regional transportation projects identified in local plans and special studies adopted since the 2000 RTP was completed in order to update the 2000 RTP project list. This inventory included:

- new projects or studies that are not currently in the 2000 Regional Transportation Plan, but that have been adopted in local transportation system plans (TSPs) and regional corridor studies through a public process
- updates to existing 2000 RTP projects or studies to reflect changes in project location, description, cost and recommended timing

Nearly all city and county transportation plans in the Metro region have been updated during the past three years to be consistent with the 2000 RTP. In the process of completing these updates, many local plans identified new transportation projects of regional significance that are proposed as part of the draft Federal RTP as amendments. Some corridor studies that have been completed (or are nearing completion) since the last RTP update in August 2000 have been endorsed by resolution with the expectation that the new projects generated by these studies would be incorporated into the current RTP update. This includes the Powell/Foster Corridor Study, Phase 1.

Finally, the Pleasant Valley Concept Plan, Powell Boulevard Streetscape Study and the McLoughlin Boulevard Enhancement Plan were completed in 2003 with the expectation that new projects generated by these local planning efforts would be incorporated into the Federal RTP. The recommendations endorsed in each of these efforts are also reflected Federal RTP.

The updated “Illustrative System” of projects served as the basis for defining an updated financially constrained system of improvements that represents a subset of roughly half of the Illustrative system. Development of the financially constrained system followed the basic principles of (a) maintaining the Region 2040 Plan policy emphasis of the 2000 RTP by focusing improvements in areas that serve as the economic engines for the region, including centers, ports and industrial areas, and (b) maintaining a similar project balance among travel modes, including roads, transit, bikeways, pedestrian improvements and other project categories.

The Federal RTP provides an updated set of financially constrained projects and programs for future MTIP allocations and is anticipated to meet the federal clean air act. As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. The MTIP allocates federal funds in the region, and is updated every two years, and includes a rolling, four-year program of transportation improvements.

### ***Technical Considerations***

Because of the inherent time and resource constraints, a single round of modeling and analysis was utilized for this update. The principal purpose for this approach was to complete the federal air quality conformity analysis required to demonstrate that the updated plan is consistent with the region’s air quality maintenance plan.

To achieve this, the Federal RTP update combined the preferred and priority systems contained in the 2000 RTP as a single “Illustrative” system that established the universe of projects eligible for inclusion in the financially constrained system that is eligible for federal funding. Exceptions to this guideline were local and regional projects identified in corridor refinements and local transportation plans since the 2000 RTP was adopted. This approach focused TPAC’s activities on defining the financially constrained system, and was based on the assumption that the combination of “Illustrative” system projects from the existing plan, and new projects from subsequent studies, will be adequate to meet travel demand in the new 2025 horizon year.

The Federal RTP did not include an iterative process of multiple rounds of modeling to test new projects against the congestion management system and other RTP performance measures.

In addition to updating transportation projects and growth forecasts, Metro must demonstrate that the Federal RTP meets federal and state air quality analysis requirements. During November and December, Metro completed a technical analysis known as air quality conformity.

The results of the Federal RTP update work tasks are included in the 2004 Regional Transportation Plan Public Comment document, which is included as Exhibit "A" (Parts 1, 2 and 3). A public comment period was held from October 31, 2003 through December 10, 2003. The Metro Council held a public hearing on Dec. 4, 2003. Exhibit "B" includes a "Summary of Public Comments: Receive October 31, 2003 through December 4, 2003," dated December 5, 2003. Exhibit "C" includes a "Supplemental Public Comments: Received December 5, 2003 through December 10, 2003," dated December 11, 2003.

The Metro Council is being asked to approve Exhibit A as amended by Exhibit "B" and "C" and direct this resolution, the updated Federal RTP and Resolution 03-3382 upon its adoption by the Metro Council be submitted to the U.S. Department of Transportation and the U.S. Environmental Protection Agency prior to January 26, 2004 for review for acknowledgement that these documents conform with the requirements of the Clean Air Act.

## **ANALYSIS/INFORMATION**

### **1. Known Opposition**

None known. The region is and has been in compliance with the Clean Air Act since 1996. The Federal RTP financially constrained system of transportation improvements is anticipated to meet federal clean air act requirements.

### **2. Legal Antecedents**

There are a wide variety of past Federal, State and regional legal actions that apply to this action.

Federal regulations include:

- the Clean Air Act, as amended [42 U.S. C. 7401, especially section 176(c)]; and
- Federal statutes concerning air quality conformity [23 U.S.C. 109(j)];
- US EPA transportation conformity rules (40 CFR, parts 51 and 93)
- USDOT rules that require Metro to update RTPs on a three-year cycle [23 CFR 450.322(a)].

State regulations include:

- Oregon Administrative Rules for Transportation Conformity, (OAR Chapter 340, Division 252);
- Portland Area Carbon Monoxide Maintenance Plan and Portland Area Ozone Maintenance Plan each prepared in 1996 and which received Federal approvals on September 2, 1997 and May 19, 1997 respectively.

Previous related Metro Council actions include:

- Metro Resolution No. 00-2969, adopting the air quality conformity for the 2000 RTP;
- Metro Resolution No. 02-3186A, amending the 2000 RTP and 2002 MTIP to incorporate OTIA bond projects;
- Metro Ordinance 03-1007A, amending the 2000 RTP to incorporate the two phases of the South Corridor Study

- Metro Resolution 03-3351, amending the 2000 RTP and MTIP to incorporate the South Corridor LRT Project (again, using a less than full analysis method to assess air quality impacts from the project when added to the RTP and MTIP).

### **3. Anticipated Effects**

Approval of this Resolution will allow submittal of the Federal RTP as set forth in Exhibit A and amended by Exhibit “B” and Exhibit “C” to the U.S. Department of Transportation (Federal Highway Administration and Federal Transit Administration) as well as the U.S. Environmental Protection Agency for their review and hopefully, acknowledgement by U.S. DOT and U.S. EPA in a formal conformity determination that the Federal RTP complies with the federal Clean Air Act and federal planning requirements. This approval will allow Metro and local, regional and state agencies to proceed with transportation investments within the region.

### **4. Budget Impacts**

None. The subject transportation investments are allocations of Federal and State transportation funds.

### **RECOMMENDED ACTION**

Adopt Resolution 03-3380.

## STAFF REPORT

IN CONSIDERATION OF RESOLUTION NO. 03-3380<sup>A</sup>, FOR THE PURPOSE OF ADOPTING THE 2004 REGIONAL TRANSPORTATION PLAN AS THE FEDERAL METROPOLITAN TRANSPORTATION PLAN TO MEET FEDERAL PLANNING REQUIREMENTS

---

Date: ~~November 6, 2003~~December 10, 2003  
Ellis

Prepared by: Kim

### PROPOSED ACTION

This resolution would adopt the 2004 Federal update to the Regional Transportation Plan (“Federal RTP”) as the federal metropolitan transportation plan and would bring the RTP into compliance with the Clean Air Act and federal planning requirements, pending approval of Resolution No. 03-3382 (the 2004 RTP/2004-07 MTIP Air Quality Conformity Determination). Metro is not required to update the regional transportation plan for state planning purposes until 2007.

The 2004-Federal RTP, included as Exhibit “A,” includes/contains:

- RTP Policies/Policy Packet (Part 1) – Chapter 1 of the Regional Transportation Plan (RTP) presents the overall policy framework for specific transportation policies, objectives and actions identified throughout this plan. It also sets a direction for future planning and decision-making by the Metro Council and the implementing agencies, counties and cities.

The Policy Packet includes ~~The~~ proposed policy amendments for the 2004-Federal RTP, Regional Transportation Plan which includes are limited to changes to several transportation system map changes in Chapter 1 and changes to Chapter 1 policy text to establish two tiers of industrial areas (“regionally significant” and “local”) for the purpose of transportation planning and funding. ~~No changes to Chapter 1 policy text are proposed as part of this update.~~ The updated system maps include a number of “housekeeping” amendments that reflect fine-tuning of the various modal system maps. Many of these amendments were recommended by local cities and counties as part of local transportation plans adopted since the last RTP update in August 2000. In addition, a new map that identifies the Metropolitan Planning Organization (MPO) Planning Boundary is proposed to be added to Chapter 1 of the RTP. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes.

- RTP Projects and Systems Analysis/Project Packet (Part 2) - Chapters 2 through 5 of the The Project Packet RTP includes an updated Financially Constrained System that will be eligible for state and federal funding and a larger “Illustrative System” that identifies the 20-year transportation needs for the region, detail the scope and nature of proposed improvements that address the 20-year needs and a financial plan for implementing the recommended projects. ~~The chapters have been updated to~~ As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. This packet incorporates new projects amendments recommended in local transportation plans or corridor studies adopted since 2000 and endorsed by Metro as “friendly amendments” as part of the local review process, and technical or factual updates to the plan text that reflect updated population, employment and other empirical data needed to establish a new planning horizon year of 2025. Chapter 5 also includes a description of the The updated financially constrained system, which is required for federal certification/planning purposes, and serves as the basis for a conformity determination with the federal Clean Air Act that will be addressed through a separate Resolution No.

03-3382. Projects that have been added to the Federal RTP and that are not included in the 2000 RTP priority system would require compliance with statewide planning goals through a separate amendment to the 2000 RTP Priority System prior to construction.

- RTP Implementation Technical Packet (Part 3) - Chapter 6 of the RTP establishes regional compliance with state and federal planning requirements, and sets requirements for city and county compliance with the RTP. This chapter also establishes criteria for amending the RTP project lists, and the relationship between the RTP and the Metro Transportation Improvement Program (MTIP). Chapter 6 also identifies future studies needed to refine the RTP as part of future updates. The Technical Packet incorporates technical changes to the Chapter 6 of the RTP that delete technical requirements that have been addressed through recently adopted corridor studies and frame future work that must still be completed as part of future updates to the Federal RTP.

## EXISTING LAW

Metro is required to complete a periodic update of the Regional Transportation Plan (RTP) in order to maintain continued compliance with the federal Clean Air Act. The U.S. Department of Transportation (DOT) and the U.S. Environmental Protection Agency (EPA) approved and acknowledged the 2000 RTP air quality conformity determination on January 26, 2001. Under federal regulations, the RTP must be updated every three years to ensure that the plan adequately addresses future travel needs and is consistent with the federal Clean Air Act. As a result, a new plan demonstrating conformity with the Clean Air Act must approved and acknowledged by US DOT and US EPA in a formal conformity determination by January 26, 2004, when the current US DOT/US EPA conformity determination for the 2000 RTP expires. If the conformity determination expires, the plan is considered to “lapse,” meaning that federally-funded transportation improvements could not be obligated during the lapse period. This consequence would apply to engineering, right-of-way acquisition or construction of any federally funded or permitted transportation project, except those defined as exempt because they do not have the possibility of increasing vehicle emissions.

Because the 2000 RTP was the result of a major update and was completed relatively recently, the 2004 Federal update to the RTP represents a minor effort that was limited to meeting state and federal requirements, and incorporating new policy direction set by Joint Policy Advisory Committee on Transportation (JPACT) and the Metro Council as part of various corridor and special studies adopted since 2000. The update also incorporated a number of “friendly amendments” proposed as part of local transportation plans adopted since 2000.

In addition, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Area Boundary. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes. The boundary includes the area inside Metro's jurisdictional boundary, the urban growth boundary and the 2000 census defined urbanized area boundary for the Portland metropolitan region. A new map has been added to chapter 1 of the RTP to meet this requirement.

## FACTUAL BACKGROUND AND ANALYSIS

The most pressing need for this update to the RTP is continued compliance with the federal Clean Air Act. Most of the federal requirements only required minor revisions to the RTP in order to maintain compliance. The more involved efforts involve the requirement for a “financially constrained” plan and demonstration of conformity with the federal Clean Air Act. The conformity finding is based on the projects that make up the “financially constrained” plan. The financial constraint exercise consists of developing a projection of reasonably expected transportation funding over the 20-year plan period, and

selecting a subset of projects from the plan that fit within this “constraint.” The financially constrained system of projects is then evaluated to determine whether implementation of the projects would violate the federal Clean Air Act.

In October 2003, Metro staff worked with members of the Transportation Policy Alternatives Committee (TPAC) and other interested parties to develop a comprehensive inventory of regional transportation projects identified in local plans and special studies adopted since the 2000 RTP was completed in order to update the 2000 RTP project list. This inventory included:

- new projects or studies that are not currently in the 2000 Regional Transportation Plan, but that have been adopted in local transportation system plans (TSPs) and regional corridor studies through a public process
- updates to existing 2000 RTP projects or studies to reflect changes in project location, description, cost and recommended timing

Nearly all city and county transportation plans in the Metro region have been updated during the past three years to be consistent with the 2000 RTP. In the process of completing these updates, many local plans identified new transportation projects of regional significance that are proposed as part of the draft [2004 Federal RTP](#) as amendments. Some corridor studies that have been completed (or are nearing completion) since the last RTP update in August 2000 have been endorsed by resolution with the expectation that the new projects generated by these studies would be incorporated into the current RTP update. This includes the Powell/Foster Corridor Study, Phase 1.

Finally, the Pleasant Valley Concept Plan, Powell Boulevard Streetscape Study and the McLoughlin Boulevard Enhancement Plan were completed in 2003 with the expectation that new projects generated by these local planning efforts would be incorporated into the [2004-Federal RTP](#). The recommendations endorsed in each of these efforts are also reflected [2004-Federal RTP](#).

The updated ~~preferred~~ “[Illustrative sSystem](#)” of projects served as the basis for defining an updated financially constrained system of improvements that represents a subset of roughly half of the ~~preferred~~ [Illustrative](#) system. Development of the financially constrained system followed the basic principles of (a) maintaining the Region 2040 Plan policy emphasis of the 2000 RTP by focusing improvements in areas that serve as the economic engines for the region, including centers, ports and industrial areas, and (b) maintaining a similar project balance among travel modes, including roads, transit, bikeways, pedestrian improvements and other project categories.

The [2004-Federal RTPRegional-Transportation-Plan](#) provides an updated set of financially constrained projects and programs for future MTIP allocations and is anticipated to meet the federal clean air act. As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. The MTIP allocates federal funds in the region, and is updated every two years, and includes a rolling, four-year program of transportation improvements.

### ***Technical Considerations***

Because of the inherent time and resource constraints, a single round of modeling and analysis was utilized for this update. The principal purpose for this approach was to complete the federal air quality conformity analysis required to demonstrate that the updated plan is consistent with the region’s air quality maintenance plan.

To achieve this, the 2004 Federal RTP update combined the preferred and priority systems contained in the 2000 RTP as a single ~~preferred~~ “Illustrative” system that established the universe of projects eligible for inclusion in the financially constrained system that is eligible for federal funding. Exceptions to this guideline were local and regional projects identified in corridor refinements and local transportation plans since the 2000 RTP was adopted. This approach focused TPAC’s activities on defining the financially constrained system, and was based on the assumption that the combination of ~~preferred~~ “Illustrative” system projects from the existing plan, and new projects from subsequent studies, will be adequate to meet travel demand in the new 2025 horizon year.

~~As part of documenting findings from this limited RTP modeling exercise, staff reviewed and updated system performance conclusions from the 2000 RTP, as appropriate, to reflect the new preferred and financially constrained systems. The 2004 Federal RTP Update did not include an iterative process of multiple rounds of modeling to test new projects against the congestion management system and other RTP performance measures, since the new preferred system of improvements is expected to perform adequately. Any outstanding issues that were identified are referenced for future corridor or area studies.~~

In addition to updating transportation projects and growth forecasts, Metro must demonstrate that the 2004 Federal RTP meets federal and state air quality analysis requirements. During November and December, Metro completed a technical analysis known as air quality conformity.

The results of the 2004 Federal RTP update work tasks are included in the 2004 Regional Transportation Plan Public Comment document, which is included as Exhibit "A-" (Parts 1, 2 and 3). A ~~30-day~~ public comment period was held from October 31, 2003 through December 4~~10~~, 2003. The Metro Council held a public hearing on Dec. 4, 2003. Exhibit “B” includes a “Summary of Public Comments: Receive October 31, 2003 through December 4, 2003,” dated December 5, 2003. Exhibit “C” includes a “Supplemental Public Comments: Received December 5, 2003 through December 10, 2003,” dated December 11, 2003,

The Metro Council is being asked to approve Exhibit A as amended by Exhibit “B” and “C” this work and direct that a request be this resolution, the updated Federal RTP and Resolution 03-3382 upon its adoption by the Metro Council be submitted for to the U.S. Department of Transportation and the U.S. Environmental Protection Agency prior to January 26, 2004 for review and for acknowledgement that these documents conform with the requirements of the Clean Air Act of the 2004 RTP Conformity Determination.

## ANALYSIS/INFORMATION

### 1. Known Opposition

None known. The region is and has been in compliance with the Clean Air Act since 1996. The 2004 Federal RTP financially constrained system of transportation improvements is anticipated to meet federal clean air act requirements.

### 2. Legal Antecedents

There are a wide variety of past Federal, State and regional legal actions that apply to this action.

Federal regulations include:

- the Clean Air Act, as amended [42 U.S. C. 7401, especially section 176(c)]; and
- Federal statutes concerning air quality conformity [23 U.S.C. 109(j)];
- US EPA transportation conformity rules (40 CFR, parts 51 and 93)
- USDOT rules that require Metro to update RTPs on a three-year cycle [23 CFR 450.322(a)].

State regulations include:

- Oregon Administrative Rules for Transportation Conformity, (OAR Chapter 340, Division 252);
- Portland Area Carbon Monoxide Maintenance Plan and Portland Area Ozone Maintenance Plan each prepared in 1996 and which received Federal approvals on September 2, 1997 and May 19, 1997 respectively.

Previous related Metro Council actions include:

- Metro Resolution No. 00-2969, adopting the air quality conformity for the 2000 RTP;
- Metro Resolution No. 02-3186A, amending the 2000 RTP and 2002 MTIP to incorporate OTIA bond projects;
- Metro Ordinance 03-1007A, amending the 2000 RTP to incorporate the two phases of the South Corridor Study
- Metro Resolution 03-3351, amending the 2000 RTP and MTIP to incorporate the South Corridor LRT Project ( again, using a less than full analysis method to assess air quality impacts from the project when added to the RTP and MTIP).

### **3. Anticipated Effects**

Approval of this Resolution will allow submittal of the [2004-Federal RTP](#) as set forth in Exhibit A [and amended by Exhibit "B" and Exhibit "C"](#) to the U.S. Department of Transportation- (Federal Highway Administration and Federal Transit Administration) as well as the U.S. Environmental Protection Agency for their review and hopefully, acknowledgement by U.S. DOT and U.S. EPA in a formal conformity determination that the [2004-Federal RTP](#) complies with the federal Clean Air Act and federal planning requirements. This approval will allow Metro and local, regional and state agencies to proceed with transportation investments within the region.

### **4. Budget Impacts**

None. The subject transportation investments are allocations of Federal and State transportation funds.

## **RECOMMENDED ACTION**

Adopt Resolution 03-3380.

BEFORE THE METRO COUNCIL

FOR THE PURPOSE OF DESIGNATION OF ) RESOLUTION NO. 03-3380  
THE 2004 REGIONAL TRANSPORTATION )  
PLAN AS THE FEDERAL METROPOLITAN )  
TRANSPORTATION PLAN TO MEET ) Introduced by Councilor Park  
FEDERAL PLANNING REQUIREMENTS )

WHEREAS, federal law requires Metro to demonstrate every three years that its Regional Transportation Plan (“RTP”) conforms to the Clean Air Act; and

WHEREAS, the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency last found the RTP to conform to the requirements of the Clean Air Act on January 26, 2001; and

WHEREAS, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Boundary; and

WHEREAS, a post-adoption air quality analysis must demonstrate conformity with the federal Clean Air Act for continued federal certification; and

WHEREAS, the Metro Council has received and considered the advice of its Joint Policy Advisory Committee on Transportation and its Metro Policy Advisory Committee, and all proposed amendments identified in Exhibit “A” have been the subject of a 30-day public review period; and

WHEREAS, the Council held a public hearing on the 2004 RTP on December 11, 2003; now therefore,

BE IT RESOLVED that the Metro Council:

1. The 2004 Regional Transportation Plan (“RTP”), adopted by the Council in Ordinance No. 03-1024, shall be the federal Metropolitan Transportation Plan
2. The map in Part 1 (Policy Update) of the 2004 Regional Transportation Plan Update, adopted by the Council in Ordinance No. 03-1024, shall be the Metropolitan Planning Organization Planning Area Boundary for purposes of the federal Metropolitan Transportation Plan.

3. The Chief Operating Officer shall submit this resolution and the 2004 RTP and the 2004 RTP/2004-07 MTIP Air Quality Conformity Determination as set forth in Part 4 (Air Quality Conformity) of Exhibit A to the U.S. Department of Transportation (Federal Highway Administration and the Federal Transit Administration) and the U.S. Environmental Protection Agency for review for acknowledgement that these documents conform with the requirements of the Clean Air Act prior to January 26, 2004.

4. The Findings of Compliance in Exhibit B, attached and incorporated into this resolution, explain how the 2004 RTP conforms to the requirements of the Clean Air Act and federal planning requirements.

ADOPTED by the Metro Council this \_\_\_\_ day of December 2003.

---

David Bragdon, Council President

Approved as to Form:

Daniel B. Cooper, Metro Attorney

## STAFF REPORT

### IN CONSIDERATION OF RESOLUTION NO. 03-3380, FOR THE PURPOSE OF DESIGNATION OF THE 2004 REGIONAL TRANSPORTATION PLAN AS THE FEDERAL METROPOLITAN TRANSPORTATION PLAN TO MEET FEDERAL PLANNING REQUIREMENTS

---

Date: November 6, 2003

Prepared by: Kim Ellis

#### PROPOSED ACTION

This resolution would adopt the 2004 Regional Transportation Plan (RTP) as the federal metropolitan transportation plan and would bring the RTP into compliance with the Clean Air Act and federal planning requirements. The 2004 RTP includes:

- RTP Policies – Chapter 1 of the Regional Transportation Plan (RTP) presents the overall policy framework for specific transportation policies, objectives and actions identified throughout this plan. It also sets a direction for future planning and decision-making by the Metro Council and the implementing agencies, counties and cities.

The proposed policy amendments for the 2004 Regional Transportation Plan are limited to several transportation system map changes in Chapter 1. No changes to Chapter 1 policy text are proposed as part of this update. The updated system maps include a number of "housekeeping" amendments that reflect fine-tuning of the various modal system maps. Many of these amendments were recommended by local cities and counties as part of local transportation plans adopted since the last RTP update in August 2000. In addition, a new map that identifies the Metropolitan Planning Organization (MPO) Planning Boundary is proposed to be added to Chapter 1 of the RTP. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes.

- RTP Projects and Systems Analysis - Chapters 2 through 5 of the RTP identify the 20-year transportation needs for the region, detail the scope and nature of proposed improvements that address the 20-year needs and a financial plan for implementing the recommended projects. The chapters have been updated to incorporate project amendments recommended in local transportation plans adopted since 2000 and endorsed by Metro as "friendly amendments" as part of the local review process and technical or factual updates to the plan text that reflect updated population, employment and other empirical data needed to establish a new planning horizon year of 2025. Chapter 5 also includes a description of the financially constrained system, which is required for federal certification, and serves as the basis for a conformity determination with the federal Clean Air Act that will be addressed through a separate Resolution No. 03-3382.
- RTP Implementation - Chapter 6 of the RTP establishes regional compliance with state and federal planning requirements, and sets requirements for city and county compliance with the RTP. This chapter also establishes criteria for amending the RTP project lists, and the relationship between the RTP and the Metro Transportation Improvement Program (MTIP). Chapter 6 also identifies future studies needed to refine the RTP as part of future updates.

#### EXISTING LAW

Metro is required to complete a periodic update of the Regional Transportation Plan (RTP) in order to maintain continued compliance with the federal Clean Air Act. The U.S. Department of Transportation (DOT) and the U.S. Environmental Protection Agency (EPA) approved and acknowledged the 2000 RTP

air quality conformity determination on January 26, 2001. Under federal regulations, the RTP must be updated every three years to ensure that the plan adequately addresses future travel needs and is consistent with the federal Clean Air Act. As a result, a new plan demonstrating conformity with the Clean Air Act must be approved and acknowledged by US DOT and US EPA in a formal conformity determination by January 26, 2004, when the current US DOT/US EPA conformity determination for the 2000 RTP expires. If the conformity determination expires, the plan is considered to “lapse,” meaning that federally-funded transportation improvements could not be obligated during the lapse period. This consequence would apply to engineering, right-of-way acquisition or construction of any federally funded or permitted transportation project, except those defined as exempt because they do not have the possibility of increasing vehicle emissions.

Because the 2000 RTP was the result of a major update and was completed relatively recently, the 2004 update represents a minor effort that was limited to meeting state and federal requirements, and incorporating new policy direction set by Joint Policy Advisory Committee on Transportation (JPACT) and the Metro Council as part of various corridor and special studies adopted since 2000. The update also incorporated a number of “friendly amendments” proposed as part of local transportation plans adopted since 2000.

In addition, federal transportation planning rules require Metro, as the Metropolitan Planning Organization (“MPO”), to identify a MPO Planning Area Boundary. This boundary defines the area that the Regional Transportation Plan applies to for federal planning purposes. The boundary includes the area inside Metro's jurisdictional boundary, the urban growth boundary and the 2000 census defined urbanized area boundary for the Portland metropolitan region. A new map has been added to chapter 1 of the RTP to meet this requirement.

#### FACTUAL BACKGROUND AND ANALYSIS

The most pressing need for this update to the RTP is continued compliance with the federal Clean Air Act. Most of the federal requirements only required minor revisions to the RTP in order to maintain compliance. The more involved efforts involve the requirement for a “financially constrained” plan and demonstration of conformity with the federal Clean Air Act. The conformity finding is based on the projects that make up the “financially constrained” plan. The financial constraint exercise consists of developing a projection of reasonably expected transportation funding over the 20-year plan period, and selecting a subset of projects from the plan that fit within this “constraint.” The financially constrained system of projects is then evaluated to determine whether implementation of the projects would violate the federal Clean Air Act.

In October 2003, Metro staff worked with members of the Transportation Policy Alternatives Committee (TPAC) and other interested parties to develop a comprehensive inventory of regional transportation projects identified in local plans and special studies adopted since the 2000 RTP was completed in order to update the 2000 RTP project list. This inventory included:

- new projects or studies that are not currently in the 2000 Regional Transportation Plan, but that have been adopted in local transportation system plans (TSPs) and regional corridor studies through a public process
- updates to existing 2000 RTP projects or studies to reflect changes in project location, description, cost and recommended timing

Nearly all city and county transportation plans in the Metro region have been updated during the past three years to be consistent with the 2000 RTP. In the process of completing these updates, many local

plans identified new transportation projects of regional significance that are proposed as part of the draft 2004 RTP as amendments. Some corridor studies that have been completed (or are nearing completion) since the last RTP update in August 2000 have been endorsed by resolution with the expectation that the new projects generated by these studies would be incorporated into the current RTP update. This includes the Powell/Foster Corridor Study, Phase 1.

Finally, the Pleasant Valley Concept Plan, Powell Boulevard Streetscape Study and the McLoughlin Boulevard Enhancement Plan were completed in 2003 with the expectation that new projects generated by these local planning efforts would be incorporated into the 2004 RTP. The recommendations endorsed in each of these efforts are also reflected 2004 RTP.

The updated preferred system of projects served as the basis for defining an updated financially constrained system of improvements that represents a subset of roughly half of the preferred system. Development of the financially constrained system followed the basic principles of (a) maintaining the Region 2040 Plan policy emphasis of the 2000 RTP by focusing improvements in areas that serve as the economic engines for the region, including centers, ports and industrial areas, and (b) maintaining a similar project balance among travel modes, including roads, transit, bikeways, pedestrian improvements and other project categories.

The 2004 Regional Transportation Plan provides an updated set of financially constrained projects and programs for future MTIP allocations and is anticipated to meet the federal clean air act. As the federally recognized system, the financially constrained system is also the source of transportation projects that may be funded through the Metropolitan Transportation Improvement Program. The MTIP allocates federal funds in the region, and is updated every two years, and includes a rolling, four-year program of transportation improvements.

### ***Technical Considerations***

Because of the inherent time and resource constraints, a single round of modeling and analysis was utilized for this update. The principal purpose for this approach was to complete the federal air quality conformity analysis required to demonstrate that the updated plan is consistent with the region's air quality maintenance plan.

To achieve this, the 2004 RTP update combined the preferred and priority systems contained in the 2000 RTP as a single preferred system that established the universe of projects eligible for inclusion in the financially constrained system that is eligible for federal funding. Exceptions to this guideline were local and regional projects identified in corridor refinements and local transportation plans since the 2000 RTP was adopted. This approach focused TPAC's activities on defining the financially constrained system, and was based on the assumption that the combination of preferred system projects from the existing plan, and new projects from subsequent studies, will be adequate to meet travel demand in the new 2025 horizon year.

As part of documenting findings from this limited RTP modeling exercise, staff reviewed and updated system performance conclusions from the 2000 RTP, as appropriate, to reflect the new preferred and financially constrained systems. The 2004 RTP Update did not include an iterative process of multiple rounds of modeling to test new projects against the congestion management system and other RTP performance measures, since the new preferred system of improvements is expected to perform adequately. Any outstanding issues that were identified are referenced for future corridor or area studies.

In addition to updating transportation projects and growth forecasts, Metro must demonstrate that the 2004 RTP meets federal and state air quality analysis requirements. During November, Metro completed a technical analysis known as air quality conformity.

The results of the 2004 RTP update work tasks are included in the 2004 Regional Transportation Plan Public Comment document, which is included as Exhibit "A." A 30-day public comment period was held from October 31, 2003 through December 4, 2003. The Metro Council is being asked to approve this work and direct that a request be submitted for US Department of Transportation and U.S. EPA review and acknowledgement of the 2004 RTP Conformity Determination.

## **ANALYSIS/INFORMATION**

### **1. Known Opposition**

None known. The region is and has been in compliance with the Clean Air Act since 1996. The 2004 RTP financially constrained system of transportation improvements is anticipated to meet federal clean air act requirements.

### **2. Legal Antecedents**

There are a wide variety of past Federal, State and regional legal actions that apply to this action.

Federal regulations include:

- the Clean Air Act, as amended [42 U.S. C. 7401, especially section 176(c)]; and
- Federal statutes concerning air quality conformity [23 U.S.C. 109(j)];
- US EPA transportation conformity rules (40 CFR, parts 51 and 93)
- USDOT rules that require Metro to update RTPs on a three-year cycle [23 CFR 450.322(a)].

State regulations include:

- Oregon Administrative Rules for Transportation Conformity, (OAR Chapter 340, Division 252);
- Portland Area Carbon Monoxide Maintenance Plan and Portland Area Ozone Maintenance Plan each prepared in 1996 and which received Federal approvals on September 2, 1997 and May 19, 1997 respectively.

Previous related Metro Council actions include:

- Metro Resolution No. 00-2969, adopting the air quality conformity for the 2000 RTP;
- Metro Resolution No. 02-3186A, amending the 2000 RTP and 2002 MTIP to incorporate OTIA bond projects;
- Metro Ordinance 03-1007A, amending the 2000 RTP to incorporate the two phases of the South Corridor Study
- Metro Resolution 03-3351, amending the 2000 RTP and MTIP to incorporate the South Corridor LRT Project ( again, using a less than full analysis method to assess air quality impacts from the project when added to the RTP and MTIP).

### **3. Anticipated Effects**

Approval of this Resolution will allow submittal of the 2004 RTP as set forth in Exhibit A to the US Department of Transportation, Federal Highway Administration and Federal Transit Administration as well as the US Environmental Protection Agency for their review and hopefully, acknowledgement by US DOT and US EPA in a formal conformity determination that the 2004 RTP complies with the federal Clean Air Act and federal planning requirements. This approval will allow Metro and local, regional and state agencies to proceed with transportation investments within the region.

#### **4. Budget Impacts**

None. The subject transportation investments are allocations of Federal and State transportation funds.

#### **RECOMMENDED ACTION**

Adopt Resolution 03-3380.

## ***Appendix 6: Metropolitan Transportation Improvement Program 2004-07***

---

The Transportation Priorities 2004-07 program, administered by Metro, allocates the expected federal transportation funding from the Surface Transportation Program (STP) and Congestion Mitigation/Air Quality (CMAQ) to agencies in the Portland metropolitan region. The current allocation process will choose from 82 applications totaling \$157 million in costs to select projects and programs constrained to projected revenues in the years 2006 and 2007 of \$53.75 million.

The program began with an outreach and interview effort to the eligible applicant agencies in the fall of 2002 to determine the program objectives and to update the technical evaluation process to reflect the program objectives. Upon completion of this outreach process, the Joint Policy Advisory Committee on Transportation (JPACT) and the Metro Council defined the program objectives as following:

Application materials were updated to measure or describe the potential impacts or benefits of a particular project on the program objectives. Four geographic subareas of the region were provided targets for a cost amount of projects or programs for which they could apply and the agencies submitted project applications in December of 2002.

Agencies were required to have met strict public involvement requirements for the projects and programs for which they were applying for funds. The project or program had to be derived from and adopted in a plan that met the nine outreach requirements outlined in Exhibit A. This ensured that the local community had an opportunity to participate in the decision process that defined the project scope and need. A tenth outreach requirement was that the governing board of the sponsoring agency adopt at a public meeting priority to submit the project or program as their local priority for Transportation Priorities 2004-07 funding.

Metro staff then completed a technical analysis and summary of qualitative issues on each of the project applications (other than planning study applications). To inform the decision process on environmental justice issues, an analysis was completed on the number and percentage of low-income and minority and ethnic populations in the areas surrounding the applicant projects. Projects were identified that had concentrations of populations greater than 1,000 persons or more than 2.5 times the regional average population of Black, American Indian or Alaskan Native, Asian minority race or Hispanic origin in the area surrounding the project.

Projects were also identified that had concentrations of low-income population in the area surrounding the project. Low-income was defined as an annual income of up to two times the federal poverty level. Projects that had moderate (35% to 45% of the area population at less than two times the poverty level) and high concentrations (45% or more of the area population at less than two times the poverty level) were identified. The data tables for the applicant projects are attached as Exhibits B1 and B2.

Notes about the potential benefits and impacts to the populations by these projects were provided on the technical summary sheets distributed to decision makers. Display maps indicating which projects had potential benefits or impacts were also provided at the

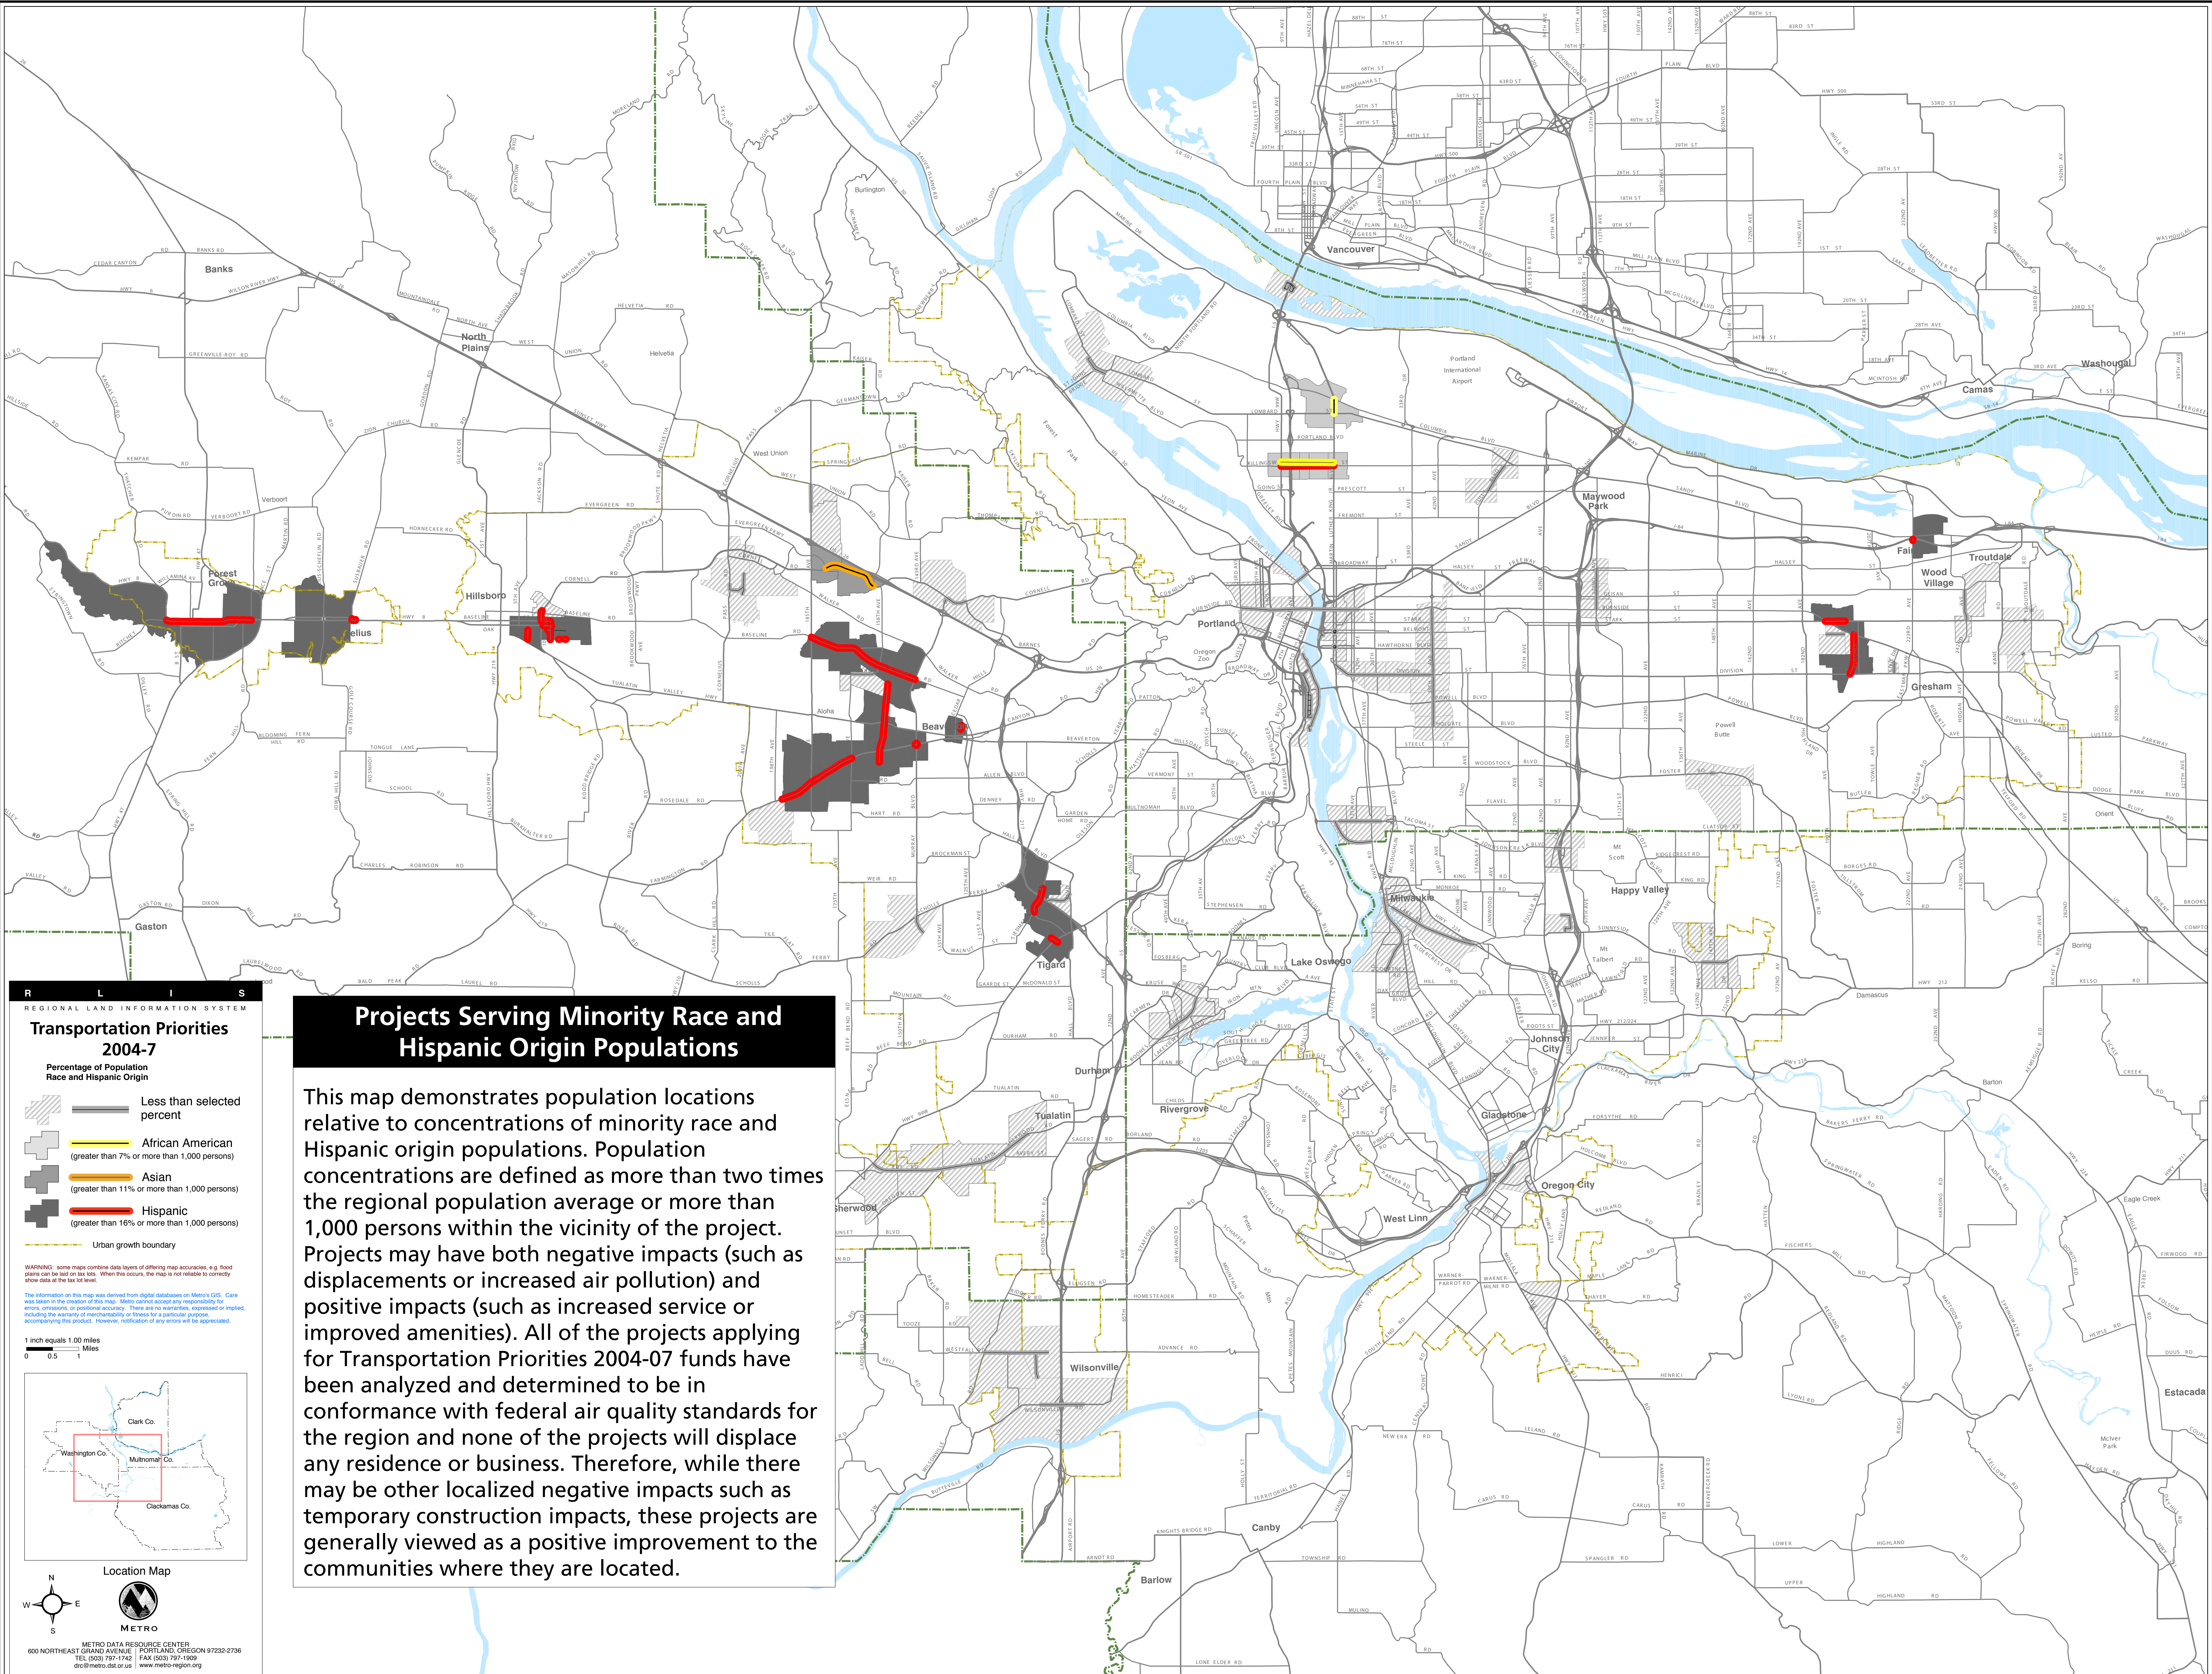

***Appendix 6: Metropolitan Transportation Improvement Program 2004-07***

---

series of public outreach meetings hosted by JPACT members and Metro Councilors to receive public testimony and comments about the project applications. Report versions of these maps are attached as Exhibits C1 and C2.

This information was also used as a condition of approval of funding to the project applicants that may have a benefit or impact to a minority, origin or low-income population. Projects in a design or preliminary engineering phase were required to demonstrate that outreach and opportunities to participate in project design would be provided to the affected population. For construction projects, applicants were required to notify and make aware of construction mitigation choices to the affected population.

Conditions of project approval are attached as Exhibit D.

**Projects Serving Minority Race and Hispanic Origin Populations**

This map demonstrates population locations relative to concentrations of minority race and Hispanic origin populations. Population concentrations are defined as more than two times the regional population average or more than 1,000 persons within the vicinity of the project. Projects may have both negative impacts (such as displacements or increased air pollution) and positive impacts (such as increased service or improved amenities). All of the projects applying for Transportation Priorities 2004-07 funds have been analyzed and determined to be in conformance with federal air quality standards for the region and none of the projects will displace any residence or business. Therefore, while there may be other localized negative impacts such as temporary construction impacts, these projects are generally viewed as a positive improvement to the communities where they are located.

### Projects Serving Low Income Populations

This map demonstrates project locations relative to concentrations of low-income populations. For purposes of this study, low-income is defined as families whose income is less than twice the federal poverty level (e.g. \$33,790 for a family of 2 adults and 2 children). Projects may have both negative impacts (such as displacements or increased air pollution) and positive impacts (such as increased service or improved amenities). All of the projects applying for Transportation Priorities 2004-07 funds have been analyzed and determined to be in conformance with federal air quality standards for the region and none of the projects will displace any residence or business. Therefore, while there may be other localized negative impacts such as temporary construction impacts, these projects are generally viewed as a positive improvement to the communities where they are located.

**EXHIBIT C**  
**Transportation Priorities 2004-07:**  
***Investing in the 2040 Growth Concept***

**Draft Conditions of Program Approval**

**Bike/Trail**

All projects will meet Metro signage and public notification requirements.

**Boulevard**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro, 2<sup>nd</sup> edition, June 2002).

(pb11) and (mb12): The 102<sup>nd</sup> Avenue Boulevard and McLoughlin Boulevard: I-205 to Highway 43 Bridge projects will incorporate stormwater design solutions (in addition to street trees) consistent with Section 5.3 of the *Green Streets* guide book and plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guide book (Metro, 2002).

**Bridge**

No bridge projects have been nominated for further funding.

**Green Streets**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* and *Green Streets* guide books (Metro, June 2002).

(pgs1): The Cully Boulevard project must demonstrate that outreach will be provided to the Hispanic community located in the vicinity of the project alignment to encourage participation in the project design and construction mitigation prior to obligation of funds.

**Freight**

(pf1): The allocation will be conditioned to examine a route that includes a grade-separated crossing of the Union Pacific main line in the vicinity of NE 11<sup>th</sup> Avenue, consistent with the Regional Transportation Plan.

## **Appendix 6: Metropolitan Transportation Improvement Program 2004-07**

(wf1): The Tualatin-Sherwood Road preliminary engineering funding of \$2 million will be placed in reserve until completion of Washington County's South Arterial Improvement Concept Feasibility Study and identification of an arterial project to serve freight needs in south Washington County.

### **Planning**

(rpln4): The RTP Corridor Plan – Next Priority Corridor is conditioned on a project budget and scope being defined in the appropriate Unified Work Program.

### **Pedestrian**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro, 2<sup>nd</sup> edition, June 2002).

(wped1): The Forest Grove pedestrian project may expand the project scope area to include the portion of 21<sup>st</sup> Avenue and A Street that is within the designated town center and should address pedestrian crossings in addition to sidewalk improvements.

### **Road Modernization**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guidebook (Metro, 2<sup>nd</sup> edition, June 2002).

(wrm6): The city of Hillsboro must demonstrate that outreach to notify and make aware of construction mitigation choices to the Hispanic community in the vicinity of this alignment prior to obligation of funds. The project will plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guidebook (Metro, June 2002).

(wrm8): The Murray extension: Scholls Ferry to Barrows project will plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guidebook (Metro, 2002).

(crm2): While the Sunnyside Road project from 142<sup>nd</sup> to 152<sup>nd</sup> is not designated to receive funds from the Transportation Priorities 2006-07 allocations, the Sunnyside Road modernization project from 142<sup>nd</sup> to 172<sup>nd</sup> is designated as the region's priority for future funding from new transportation revenues being considered by the 2003 Oregon Legislature (commonly referred to as OTIA III).

Prior to construction of the Sunnyside Road; 142<sup>nd</sup> to 172<sup>nd</sup> segment, Clackamas County and affected cities shall work with the region to develop an updated comprehensive

transportation strategy for the corridor connecting the Damascus town center and the Clackamas regional center. This strategy shall be coordinated with the concept planning for the Damascus urban growth boundary area and adopted in the regional transportation plan and local transportation system plan updates. Should funds become available for the construction of the segment between 142<sup>nd</sup> and 152<sup>nd</sup> prior to the completion of this planning work, construction could proceed in that segment.

### **Road Reconstruction**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guidebook (Metro, 2<sup>nd</sup> edition, June 2002).

(pr1): The Division Street reconstruction project will incorporate stormwater design solutions (in addition to street trees) consistent with Section 5.3 of the *Green Streets* guidebook and plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guidebook (Metro, 2002).

### **Regional Travel Options**

(ptdm1): Promotional material for the Interstate TravelSmart program will include language to be provided by Metro explaining the source of program funds and purpose of the Transportation Priorities program.

(stdm1): The I-5 Corridor TDM Plan is subject to matching funds from the Oregon Department of Transportation and/or Washington State.

(rtdm1): The Regional Travel Options core program, TMA assistance and 2040 initiatives allocations for 2004-07 are subject to completion of a strategic work plan for the program.

(tdm1) and (rtr2): The 2006-07 allocation to the Regional Travel Options (RTO) core program represents a \$500,000 reduction from the staff recommendation and from the current funding level. The Transportation Demand Subcommittee of TPAC is currently developing a strategic vision that may provide new direction for the delivery and administration of program elements. A work item will be added to the strategic vision to recommend how the program would allocate resources between all of the RTO program elements within this reduced budget amount for fiscal years 2004-07 and define what services would be delivered within this budget.

The \$500,000 reduction would be set aside in reserve for additional Frequent Bus capital improvements pending completion and JPACT and Metro Council review of the RTO strategic vision report. After review and approval of the RTO strategic vision report and a determination that these resources are sufficient, JPACT and Metro Council would agree on the allocation of the reserve account to Frequent Bus capital improvements.

**Transit Oriented Development (TOD)**

All projects will meet Metro signage and public notification requirements.

(rtod1): Upon completion of a full funding grant agreement, station areas of the Airport MAX, Interstate MAX, I-205 MAX and Washington County commuter rail are eligible for TOD program project support.

**Transit**

Capital projects will meet Metro signage and public notification requirements.

Allocations to Interstate MAX, South Corridor planning and priority project development, Washington County commuter rail, and North Macadam development per Metro Resolution Nos. 99-2442, 99-2804A and 03-3290 will be limited to actual interest and finance costs accrued and not those forecasted for cost estimating purposes as defined within the resolutions. Residual revenues will be reallocated through a subsequent MTIP update or amendment.

(tdm1) and (rtr2): The 2006-07 allocation to the Regional Travel Options (RTO) core program represents a \$500,000 reduction from the staff recommendation and from the current funding level. The Transportation Demand Subcommittee of TPAC is currently developing a strategic vision that may provide new direction for the delivery and administration of program elements. A work item will be added to the strategic vision to recommend how the program would allocate resources between all of the RTO program elements within this reduced budget amount for fiscal years 2004-07 and define what services would be delivered within this budget.

The \$500,000 reduction would be set aside in reserve for additional Frequent Bus capital improvements pending completion and JPACT and Metro Council review of the RTO strategic vision report. After review and approval of the RTO strategic vision report and a determination that these resources are sufficient, JPACT and Metro Council would agree on the allocation of the reserve account to Frequent Bus capital improvements.

**Transportation Priorities 2004-07:  
Investing in the 2040 Growth Concept**

**Conditions of Program Approval**

**Bike/Trail**

All projects will meet Metro signage and public notification requirements.

**Boulevard**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro; 2<sup>nd</sup> edition; June 2002).

(pbl1) and (mbl2): The 102<sup>nd</sup> Avenue Boulevard and McLoughlin Boulevard: I-205 to Highway 43 Bridge projects will incorporate stormwater design solutions (in addition to street trees) consistent with Section 5.3 of the *Green Streets* guide book and plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guide book (Metro: 2002).

**Bridge**

No bridge projects have been nominated for funding.

**Green Streets**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* and *Green Streets* guide books (Metro; June 2002).

(pgs1): The Cully Boulevard project must demonstrate that outreach will be provided to the Hispanic community located in the vicinity of the project alignment to encourage participation in the project design and construction mitigation prior to obligation of funds.

**Freight**

(pf1): The allocation will be conditioned to examine a route that includes a grade-separated crossing of the Union Pacific main line in the vicinity of NE 11<sup>th</sup> Avenue, consistent with the Regional Transportation Plan.

(wf1): The Tualatin-Sherwood Road preliminary engineering funding of \$2 million will be placed in reserve until completion of Washington County's South Arterial Improvement

## **Appendix 6: Metropolitan Transportation Improvement Program 2004-07**

Concept Feasibility Study and identification of an arterial project to serve freight needs in south Washington County.

### **Planning**

(rpln4): The RTP Corridor Plan – Next Priority Corridor is conditioned on a project budget and scope being defined in the appropriate Unified Work Program.

### **Pedestrian**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro; 2<sup>nd</sup> edition; June 2002).

(wped1): The Forest Grove pedestrian project may expand the project scope area to include the portion of 21<sup>st</sup> Avenue and A Street that is within the designated town center and should address pedestrian crossings in addition to sidewalk improvements.

(pped2): Both the pedestrian and freight elements of the St. Johns improvement shall be designed and constructed in tandem. The design process shall include involvement of community residents, businesses and area freight interests to ensure the design is consistent with the St. Johns truck strategy report and the adopted St. Johns town center and Lombard main street plans.

### **Road Modernization**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro; 2<sup>nd</sup> edition; June 2002).

(wrm6): The city of Hillsboro must demonstrate that outreach to notify and make aware of construction mitigation choices to the Hispanic community in the vicinity of this alignment prior to obligation of funds. The project will plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guide book (Metro; June 2002).

(wrm8): The Murray extension: Scholls Ferry to Barrows project will plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guide book (Metro: 2002).

(crm2): While the Sunnyside Road project from 142<sup>nd</sup> to 152<sup>nd</sup> is not designated to receive funds from the Transportation Priorities 2006-07 allocations, the Sunnyside Road modernization project from 142<sup>nd</sup> to 172<sup>nd</sup> is designated as the region's priority for future

## **Appendix 6: Metropolitan Transportation Improvement Program 2004-07**

funding from new transportation revenues being considered by the 2003 Oregon Legislature (commonly referred to as OTIA III).

Prior to construction of the Sunnyside Road; 142<sup>nd</sup> to 172<sup>nd</sup> segment, Clackamas County and affected cities shall work with the region to develop an updated comprehensive transportation strategy for the corridor connecting the Damascus town center and the Clackamas regional center. This strategy shall be coordinated with the concept planning for the Damascus urban growth boundary area and adopted in the regional transportation plan and local transportation system plan updates. Should funds become available for the construction of the segment between 142<sup>nd</sup> and 152<sup>nd</sup> prior to the completion of this planning work, construction could proceed in that segment.

### **Road Reconstruction**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro; 2<sup>nd</sup> edition; June 2002).

(pr1): The Division Street reconstruction project will incorporate stormwater design solutions (in addition to street trees) consistent with Section 5.3 of the *Green Streets* guide book and plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guide book (Metro: 2002).

### **Regional Travel Options**

(ptdm1): Promotional material for the Interstate TravelSmart program will include language to be provided by Metro explaining the source of program funds and purpose of the Transportation Priorities program.

(stdm1): The I-5 Corridor TDM Plan is subject to matching funds from the Oregon Department of Transportation and/or Washington State.

(rtdm1): The Regional Travel Options core program, TMA assistance and 2040 initiatives allocations for 2004-07 are subject to completion of a strategic work plan for the program.

(tdm1) and (rtr2): The 2006-07 allocation to the Regional Travel Options (RTO) core program represents a \$500,000 reduction from the staff recommendation and from the current funding level. The Transportation Demand Subcommittee of TPAC is currently developing a strategic vision that may provide new direction for the delivery and administration of program elements. A work item will be added to the strategic vision to recommend how the program would allocate resources between all of the RTO program elements within this reduced budget amount for fiscal years 2004-07 and define what services would be delivered within this budget.

## ***Appendix 6: Metropolitan Transportation Improvement Program 2004-07***

The \$500,000 reduction would be set aside in reserve for additional Frequent Bus capital improvements pending completion and JPACT and Metro Council review of the RTO strategic vision report. After review and approval of the RTO strategic vision report and a determination that these resources are sufficient, JPACT and Metro Council would agree on the allocation of the reserve account to Frequent Bus capital improvements.

### **Transit Oriented Development (TOD)**

All projects will meet Metro signage and public notification requirements.

(rtod1): Upon completion of a full funding grant agreement, station areas of the Airport MAX, Interstate MAX, I-205 MAX, and Washington County commuter rail are eligible for TOD program project support.

### **Transit**

Capital projects will meet Metro signage and public notification requirements.

Allocations to Interstate MAX, South Corridor planning and priority project development, Washington County commuter rail, and North Macadam development per Metro Resolution Nos. 99-2442, 99-2804A and 03-3290 will be limited to actual interest and finance costs accrued and not those forecasted for cost estimating purposes as defined within the resolutions. After review and approval of the RTO strategic vision report and a determination that these resources are sufficient, JPACT and Metro Council would agree on the allocation of the reserve account to Frequent Bus capital improvements.

# Local Public Involvement Checklist

Local jurisdictions/project sponsors must complete this checklist for local transportation plans and programs from which projects are drawn that are submitted to Metro for regional funding or other action.

If projects are from the same local transportation plan and/or program, only one checklist need be submitted for those projects. For projects not in the local plan and/or program, the local jurisdiction should complete a checklist for each project.

The procedures for local public involvement (See Section 3 of Metro's Local Public Involvement Policy) and this checklist are intended to ensure that the local planning and programming process has provided adequate opportunity for public involvement prior to action by Metro. Project sponsors should keep information (such as that identified in italics) on their public involvement program on file in case of a dispute.

## A. Checklist

1. At the beginning of the transportation plan or program, a public involvement program was developed and applied that met the breadth and scope of the plan/program. Public participation was broad-based, with early and continuing opportunities throughout the plan/program's lifetime.

*Keep copy of applicable public involvement plan and/or procedures.*

2. Appropriate interested and affected groups were identified and the list was updated as needed.

*Maintain list of interested and affected parties.*

3. Announced the initiation of the plan/program and solicited initial input. If the plan/program's schedule allowed, neighborhood associations, citizen planning organizations and other interest groups were notified 45 calendar days prior to (1) the public meeting or other activity used to kick off public involvement for the plan/program and (2) the initial decision on the scope and alternatives to be studied.

*Keep descriptions of initial opportunities to involve the public and to announce the project's initiation. Keep descriptions of the tools or strategies used to attract interest and obtain initial input.*

4. Provided reasonable notification of key decision points and opportunities for public involvement in the planning and programming process. Neighborhood associations, citizen planning organizations and other interest groups were notified as early as possible.

*Keep examples of how the public was notified of key decision points and public involvement opportunities, including notices and dated examples. For announcements sent by mail, document number of persons/groups on mailing list.*

5. Provided a forum for timely, accessible input throughout the lifetime of the plan/program.

*Keep descriptions of opportunities for ongoing public involvement in the plan/program, including citizen advisory committees. For key public meetings, this includes the date, location and attendance.*

**METRO**

PEOPLE PLACES  
OPEN SPACES

600 NE Grand Ave.  
Portland, OR 97232-2736

6. Provided opportunity for input in reviewing screening and prioritization criteria.

*Keep descriptions of opportunities for public involvement in reviewing screening and prioritization criteria. For key public meetings, this includes the date, location and attendance. For surveys, this includes the number received.*

7. Provided opportunity for review/comment on staff recommendations.

*Keep descriptions of opportunities for public review of staff recommendations. For key public meetings, this includes the date, location and attendance. For surveys, this includes the number received.*

8. Considered and responded to public comments and questions. As appropriate, the draft documents and/or recommendations were revised based on public input.

*Keep record of comments received and response provided.*

9. Provided adequate notification of final adoption of the plan or program. If the plan or program's schedule allows, the local jurisdiction should notify neighborhood associations, citizen participation organizations and other interest groups 45 calendar days prior to the adoption date. A follow-up notice should be distributed prior to the event to provide more detailed information.

*Keep descriptions of the notifications, including dated examples. For announcements sent by mail, keep descriptions and include number of persons/groups on mailing list.*

10. Provided a review by the governing body of the jurisdiction at a meeting that is open to the public. Submitting the list of projects by adopted resolution will meet this intent.

*Keep a record of the governing body meeting, minutes and any adopted resolutions.*

## **B. Summary of Local Public Involvement Process**

Please attach a summary (maximum two pages) of the key elements of the public involvement process for this plan, program or group of projects.

## **C. Certification Statement**

\_\_\_\_\_  
(project sponsor)

Certifies adherence to the local public involvement procedures developed to enhance public participation.

\_\_\_\_\_  
(Signed)

## Appendix 8

# Conditions of Project Approval for Receipt of Regional Flexible Funds

**PRIORITIES 2002 MTIP UPDATE  
CONDITIONS OF PROGRAM APPROVAL**

**ROAD MODERNIZATION**

- WM6 While the I-5/Nyberg Overcrossing project is fully funded through this MTIP, it is Bond Program eligible and could apply for funding from that program.
- MM1 The \$750,000 for the Gresham/Multnomah County ITS project is contingent on first use of the funds to develop and implement technology needed to implement traffic adaptive signal timing in the region.
- WM6 The \$2.328 million for the I-5/Nyberg Interchange widening project is contingent on vigorous pursuit by the sponsor, Metro and ODOT of State Bond funding for the balance needed to complete the \$3.507 million project (federal share), except that, should the needed funding not be forthcoming from that resource, Metro will allocate the balance of \$1.18 million (\$96,000 right of way and \$1.084 million construction), plus inflation of one year, from the next allocation of regional STP funds.

**TRANSIT-ORIENTED DEVELOPMENT**

- PTOD1 The \$800,000 for the Gateway Regional Center TOD is contingent on execution of an Agreement Letter between Metro's Planning Director and the Portland Development Commission's Development Director.

**TRANSIT**

The \$4.106 for the Transit Investment Program Reserve is contingent on Tri-Met developing a five-year transit service and capital plan with input from the Metro Council, JPACT and TPAC. Upon completion, an MTIP amendment to allocate the reserve to specific start-up and/or capital projects will be considered.

**TRANSIT DEMAND MANAGEMENT PROGRAM**

- TDM4&5 The TDM Subcommittee is authorized to make project allocations from 2040 Initiatives and TMA Stabilization program funds hereby approved and is directed to report on such allocations periodically to TPAC.

## *Appendix 8: Metropolitan Transportation Improvement Program 2004-07*

### **MAINLINE FREEWAY**

- WM1 The \$359,000 for PE for the U.S. 26 Widening from Murray to 185th is allocated to a Reserve Account, to be made available to the project sponsor at such time as an amendment of the 2000 RTP Financially Constrained Network has been approved, demonstrating increased funding or decreased Washington County project costs and air quality conformity of the ultimate intended scope and concept of the project with the State Implementation Plan. Additionally, this allocation is predicated on Washington County funding one-half the project construction cost.
- CM5 The \$2.0 million for the Sunrise Corridor EIS/PE project is intended to support the following:
- \$1.0 toward the DEIS/FEIS/PE for the segment extending from I-205 to the Rock Creek Junction, with all other costs needed to complete the DEIS/FEIS/PE provided by ODOT and Clackamas County; and
  - \$1.0 million for completion of exceptions' findings needed for the portion of the project extending from Rock Creek to U.S. 26 and for the preparation of a Damascus Area Concept Plan upon completion of Metro's UGB Periodic Review.
  - This allocation is subject to Metro's review of scope and budget to carry out these activities. Specific allocations to the defined work may change accordingly.

### **PEDESTRIAN PROJECTS**

- RP1 Tri-Met and Metro shall complete the transit priority sidewalk inventory, define a Pedestrian to Transit Program and coordinate with local governments for recommendation of a program of projects for consideration in the next MTIP Update.

### **ALL PROJECTS**

- Any project, regardless of fundtype, approved for funding in the MTIP, by this or any preceding action, shall coordinate with Tri-Met regarding sidewalk and bus shelter components.

**Transportation Priorities 2004-07:  
Investing in the 2040 Growth Concept**

**Conditions of Program Approval**

**Bike/Trail**

All projects will meet Metro signage and public notification requirements.

**Boulevard**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro; 2<sup>nd</sup> edition; June 2002).

(pbl1) and (mbl2): The 102<sup>nd</sup> Avenue Boulevard and McLoughlin Boulevard: I-205 to Highway 43 Bridge projects will incorporate stormwater design solutions (in addition to street trees) consistent with Section 5.3 of the *Green Streets* guide book and plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guide book (Metro: 2002).

**Bridge**

No bridge projects have been nominated for funding.

**Green Streets**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* and *Green Streets* guide books (Metro; June 2002).

(pgs1): The Cully Boulevard project must demonstrate that outreach will be provided to the Hispanic community located in the vicinity of the project alignment to encourage participation in the project design and construction mitigation prior to obligation of funds.

**Freight**

(pf1): The allocation will be conditioned to examine a route that includes a grade-separated crossing of the Union Pacific main line in the vicinity of NE 11<sup>th</sup> Avenue, consistent with the Regional Transportation Plan.

(wf1): The Tualatin-Sherwood Road preliminary engineering funding of \$2 million will be placed in reserve until completion of Washington County's South Arterial Improvement Concept Feasibility Study and identification of an arterial project to serve freight needs in south Washington County.

## ***Appendix 8: Metropolitan Transportation Improvement Program 2004-07***

### **Planning**

(rpln4): The RTP Corridor Plan – Next Priority Corridor is conditioned on a project budget and scope being defined in the appropriate Unified Work Program.

### **Pedestrian**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro; 2<sup>nd</sup> edition; June 2002).

(wped1): The Forest Grove pedestrian project may expand the project scope area to include the portion of 21<sup>st</sup> Avenue and A Street that is within the designated town center and should address pedestrian crossings in addition to sidewalk improvements.

(pped2): Both the pedestrian and freight elements of the St. Johns improvement shall be designed and constructed in tandem. The design process shall include involvement of community residents, businesses and area freight interests to ensure the design is consistent with the St. Johns truck strategy report and the adopted St. Johns town center and Lombard main street plans.

### **Road Modernization**

All projects will meet Metro signage and public notification requirements.

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro; 2<sup>nd</sup> edition; June 2002).

(wrm6): The city of Hillsboro must demonstrate that outreach to notify and make aware of construction mitigation choices to the Hispanic community in the vicinity of this alignment prior to obligation of funds. The project will plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guide book (Metro; June 2002).

(wrm8): The Murray extension: Scholls Ferry to Barrows project will plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guide book (Metro: 2002).

(crm2): While the Sunnyside Road project from 142<sup>nd</sup> to 152<sup>nd</sup> is not designated to receive funds from the Transportation Priorities 2006-07 allocations, the Sunnyside Road modernization project from 142<sup>nd</sup> to 172<sup>nd</sup> is designated as the region's priority for future funding from new transportation revenues being considered by the 2003 Oregon Legislature (commonly referred to as OTIA III).

Prior to construction of the Sunnyside Road; 142<sup>nd</sup> to 172<sup>nd</sup> segment, Clackamas County and affected cities shall work with the region to develop an updated comprehensive transportation strategy for the corridor connecting the Damascus town center and the Clackamas regional center. This strategy shall be coordinated with the concept planning for the Damascus urban growth boundary area and adopted in the regional transportation plan and local transportation system plan updates. Should funds become available for the construction of the segment between 142<sup>nd</sup> and 152<sup>nd</sup> prior to the completion of this planning work, construction could proceed in that segment.

### **Road Reconstruction**

All projects will meet Metro signage and public notification requirements.

## ***Appendix 8: Metropolitan Transportation Improvement Program 2004-07***

All projects will meet street design guidelines as defined in the *Creating Livable Streets* guide book (Metro; 2<sup>nd</sup> edition; June 2002).

(pr1): The Division Street reconstruction project will incorporate stormwater design solutions (in addition to street trees) consistent with Section 5.3 of the *Green Streets* guide book and plant street trees consistent with the planting dimensions (p 56) and species (p 17) of the *Trees for Green Streets* guide book (Metro: 2002).

### **Regional Travel Options**

(ptdm1): Promotional material for the Interstate TravelSmart program will include language to be provided by Metro explaining the source of program funds and purpose of the Transportation Priorities program.

(stdm1): The I-5 Corridor TDM Plan is subject to matching funds from the Oregon Department of Transportation and/or Washington State.

(rtdm1): The Regional Travel Options core program, TMA assistance and 2040 initiatives allocations for 2004-07 are subject to completion of a strategic work plan for the program.

(tdm1) and (rtr2): The 2006-07 allocation to the Regional Travel Options (RTO) core program represents a \$500,000 reduction from the staff recommendation and from the current funding level. The Transportation Demand Subcommittee of TPAC is currently developing a strategic vision that may provide new direction for the delivery and administration of program elements. A work item will be added to the strategic vision to recommend how the program would allocate resources between all of the RTO program elements within this reduced budget amount for fiscal years 2004-07 and define what services would be delivered within this budget.

The \$500,000 reduction would be set aside in reserve for additional Frequent Bus capital improvements pending completion and JPACT and Metro Council review of the RTO strategic vision report. After review and approval of the RTO strategic vision report and a determination that these resources are sufficient, JPACT and Metro Council would agree on the allocation of the reserve account to Frequent Bus capital improvements.

### **Transit Oriented Development (TOD)**

All projects will meet Metro signage and public notification requirements.

(rtod1): Upon completion of a full funding grant agreement, station areas of the Airport MAX, Interstate MAX, I-205 MAX, and Washington County commuter rail are eligible for TOD program project support.

### **Transit**

Capital projects will meet Metro signage and public notification requirements.

Allocations to Interstate MAX, South Corridor planning and priority project development, Washington County commuter rail, and North Macadam development per Metro Resolution Nos. 99-2442, 99-2804A and 03-3290 will be limited to actual interest and finance costs accrued and not those forecasted for cost estimating purposes as defined within the resolutions. Residual revenues will be reallocated through a subsequent MTIP update or amendment.

(tdm1) and (rtr2): The 2006-07 allocation to the Regional Travel Options (RTO) core program represents a \$500,000 reduction from the staff recommendation and from the current funding level. The Transportation Demand Subcommittee of TPAC is currently developing a strategic vision that may provide new direction for the delivery and administration of program elements. A work item will be added to the strategic vision

## *Appendix 8: Metropolitan Transportation Improvement Program 2004-07*

to recommend how the program would allocate resources between all of the RTO program elements within this reduced budget amount for fiscal years 2004-07 and define what services would be delivered within this budget.

The \$500,000 reduction would be set aside in reserve for additional Frequent Bus capital improvements pending completion and JPACT and Metro Council review of the RTO strategic vision report. After review and approval of the RTO strategic vision report and a determination that these resources are sufficient, JPACT and Metro Council would agree on the allocation of the reserve account to Frequent Bus capital improvements.

Regional Comments: 2004-07  
State Highway Fund Programming

METRO

DATE: January 16, 2003

TO: Oregon Transportation Commission

FROM: David Bragdon, Metro Council President

Rod Park, Joint Policy Advisory on Transportation Committee Chair

SUBJECT: Comments on the 2004-07 Draft STIP

JPACT appreciates the opportunity to comment on the Draft State Transportation Improvement Program (STIP) for 2004-07. Although it is Metro's responsibility to adopt the STIP in its final form as part of the Metropolitan Transportation Improvement Program (MTIP), we feel it is important to share these comments with you while it is still in draft form.

1. **Modernization Projects**

The '07 modernization reserve account of \$12.13 million, and the PE/ROW account of \$2.98 million are not tied to any specific project. ODOT staff has stated that they are waiting to understand funding levels authorized for specific projects in the federal reauthorization process before committing ODOT modernization funds. This would allow ODOT to make priority projects whole before committing any funds to lower priority or any new projects. It is likely, however, that several earmarked projects will emerge from the federal reauthorization process without adequate funding.

JPACT requests ODOT take action to identify its intentions regarding the uncommitted modernization funds. One option would be to identify priorities for projects in the final STIP that will receive modernization funds that JPACT and the Metro Council agrees to honor. Another option would be to commit to a decision process with the region for use of the modernization funds that will be adopted as an amendment to the final STIP once the federal authorization process is completed.

In addition, in December, Metro published the Draft Environmental Impact Statement for the South Corridor Project. The next step after the public hearings in February is to select the preferred alternative and identify a funding strategy. The possibility of funding from the

ODOT modernization program toward the selected South Corridor preferred alternative should be considered.

2. **Project Development for Future Modernization Projects**

The Draft STIP identifies PE and ROW funds in 2004, '05, '06 and '07 for Various Highways within several separate descriptions totaling more than \$30 million. ODOT should identify specific facilities slated to enter PE or identify a process by which facilities will be identified. The opportunity to comment on which facilities will be prioritized for engineering and thus become ready to receive modernization funds should be provided.

3. **Preservation, Safety and Bridge Program Coordination with Local Jurisdictions**

Limitations in transportation funding have caused ODOT to focus scarce resources on its preservation program at the expense of modernization. In addition to the importance of pursuing new sources of funding for modernization, this significantly increases the importance to address smaller scale modernization needs out of efficiencies from and supplemental funding to programmed preservation projects.

Although coordination with local staff does currently occur on preservation projects, the emphasis of a strict preservation scope makes unclear to local staff what the scope of their comments should entail and what opportunities to suggest design issues, and coordination to leverage capital needs are available or appropriate. We suggest an increased emphasis by ODOT to establish a "rapid response" review process with affected local jurisdiction planning and engineering staff to evaluate the priority preservation projects as generated by the pavement and bridge preservation needs analysis with clear parameters for accepting comments on the project scope. In requesting this early comment and expanded scope process, we recognize the obligation for local jurisdictions to improve communication and coordination with ODOT staff.

The review should include communication by ODOT on a draft scope of the project elements and an opportunity for local comment on the scope. Comments on the scope may include request to ODOT to improve substandard conditions as part of the project, opportunity to provide additional resources for capital improvements to be included in the project or for modifications to existing road designs within the scope of the existing right-of-way to accommodate future capital improvements.

It would be important to establish the rapid review early in the design process, soon after pavement analysis and internal review establishes preservation project priority needs and prior to estimation of final costs. The process itself should afford ODOT the opportunity to reconsider the project scope. After the initial review process, ODOT staff may decide to make no changes, increase the project scope, accommodate a local capital project within the design process, or delay a preservation project and prioritize future ODOT modernization resources to the facility.

This early and quick process would be essential to keep such a process from delaying the ability of ODOT to expend preservation funds and keep pavement and bridges from deteriorating to unacceptable conditions. JPACT understands and supports the need for ODOT to not unnecessarily delay the preservation of its facilities.

To accommodate such a review process, ODOT would need to communicate a policy or guidelines on the intended scope of preservation projects, including the types of substandard conditions that would be appropriate to correct in a preservation project.

The STIP stakeholder committee could help ODOT develop guidelines for implementing coordination activities with local transportation system plans and the regional transportation plan with its preservation program.

There are particular preservation projects in the Draft 2004-07 STIP that would benefit from a modified "rapid response" review of project scope. These include:

SE Powell Boulevard; SE 6<sup>th</sup> to SE 50<sup>th</sup>. This is a pavement preservation project with bus pads and safety elements. This project began design this year and is funded for implementation in 2004. The project presents an opportunity to provide upgrades to the street section in conjunction with the overlay. Opportunities to supplement funding and identify design improvements should be explored with affected agencies. In particular, the City of Portland and TriMet are currently developing improvements along this facility.

McLoughlin Boulevard Preservation; SE Harold – SE Naef. This is a \$5 million pavement preservation project scheduled for implementation in 2006. The ODOT design team should coordinate design of reconstruction with City of Portland and South Corridor Study staff to explore opportunities to supplement funding for any design improvements to the facility that could be completed in conjunction with the preservation project. The South Corridor Draft Environmental Impact Statement, now undergoing public review, identifies planned improvement to this segment of McLoughlin Boulevard.

Others include: OR 213; S Conway to Henrici Road, OR 224; River Road to E Portland Freeway, Sandy Blvd safety improvements, and OR 47; Quince St. to Dist. Boundary.

#### 4. Corridor Planning Contribution

The Corridor Planning program at Metro will be addressing major ODOT highway corridors to define project needs. ODOT should be making a contribution from their funding program to complete planning work affecting their facilities.

The support for corridor planning should be consistent with the regional process used to establish priorities for corridor planning efforts as adopted in Metro Resolution 01-3089.

5. **I-5 Trade Corridor TDM**

The I-5 Trade Corridor study identifies TDM programs as an important strategy in reducing travel demand. ODOT should support TDM programs in this and other corridors. The STIP should also clarify whether and how Region 1 receives funding from the statewide TDM program.

6. **ITS/ATMS Updates**

JPACT requests an annual presentation at TPAC of the ITS/ATMS program to better track the status of the regional system and how future funds are proposed to be spent, similar to other program presentations.

7. **Protective Screening Budget Increase**

The increase in funding from \$1.42 million in 04/05 to \$6.63 million in 06/07 for protective screening of overpasses appears large without further clarification of project need. Significant progress has been made on protective screening of overpasses, particularly relative to other needs. JPACT recommends a stable level of funding for protective screening and a reallocation of the balance of the funding to other unfunded capital projects without a more clear demonstration of need at this time.

8. **MTIP Coordination**

We look forward to coordinating with you on the development of regional funding priorities through the Transportation Priorities 2004-07 (MTIP) process and further definition of projects selected as a part of the 2002-05 MTIP to be included in the STIP document. When we have completed and adopted the 2004-07 MTIP, it will be essential to accurately reflect those projects in the final STIP document.

Thank you for considering our comments.

Preservation funds are distributed among the ODOT regions based on resources needed to meet pavement evaluation targets. Again, the OTC has adopted these condition targets to make the best use of available funding.

Dollars in this category are limited to specific pavement improvements. In other words, we cannot use preservation dollars to enhance sidewalks or landscaping. Instead, other state (e.g., the Region's allocation of modernization dollars) or local resources must be used for those purposes.

In the case of the \$3.757 million Powell Blvd. preservation project, we are adding over \$300,000 in safety and bike/pedestrian funds to upgrade 14 crosswalks and add or reconstruct 70 pedestrian ramps that meet the Americans with Disabilities Act. ODOT also intends to participate with the city of Portland and Metro on a more detailed streetscape plan as called for in the Foster/Powell Blvd. Corridor Plan.

I'd like to point out that ODOT generally owns the right-of-way from curb to curb and does not have jurisdiction over local sidewalks and planting strips. Therefore, it is especially important to engage the local jurisdiction in conversations about enhancements involving their right-of-way.

The region may want to enhance some preservation projects with pedestrian, transit, and bicycle amenities to meet local and regional objectives. I realize that early identification of ODOT priorities would allow local jurisdictions an opportunity to provide input on projects and to identify supplemental funds. My staff will work with Metro to agree on a way to do this.

- 4) **Corridor Planning:** We appreciate Metro's Corridor Planning efforts and have supported them by assigning ODOT staff to all the corridors under study. In particular, a large contingent of ODOT staff are involved in the I-205 Light Rail Transit Corridor.

We have also included several projects that have been identified in corridor studies in ODOT's allocation under the Regional Transportation Plan (RTP) financially constrained list. For example, Highway 217 from U.S. 26 to T.V. Highway and the I-205 Interchange at Powell Blvd. Given the large list of critical, but unmet, needs in the region, I feel it is prudent to spend our modernization dollars to ready projects for construction rather than on corridor planning.

- 5) **I-5 Trade Corridor TDM:** ODOT is supportive of pursuing transportation demand management (TDM) strategies along the I-5 Trade Corridor. The MTIP process provided \$112,000 in '06 - '07 money to help pay for a TDM strategy along the I-5 Trade Corridor. We are working within ODOT and with our regional partners to match that amount for the specified year and develop a corridor TDM strategy.

You are probably also aware that the legislature approved an additional \$1.5 million for TDM in the state. The Oregon Transportation Commission has not yet decided whether those dollars should be allocated through a grant process or specific allocations. When they do, I will make sure my staff works with you to decide how to target those resources in the Metro area.

- 6) **ITS/ATMS Updates**: You asked for annual briefings on ODOT's ITS/ATMS program. My staff has asked Metro to identify an appropriate date for a briefing in 2004.
- 7) **Protective Screening Budget Increase**: You asked ODOT to reallocate its protective screening dollars. All our protective screening efforts will be completed in 2004 and no new monies have been allocated.
- 8) **MTIP Coordination**: You asked that Metro and ODOT coordinate the updates of the Metropolitan Transportation Improvement Program (MTIP) and STIP. I agree completely that it would be less confusing to the public and allow the region to do a better job of focusing limited transportation dollars if the processes were aligned. It was unfortunate that the Oregon Transportation Commission was unable to adopt Metro's MTIP along with the rest of the Metropolitan Planning Organizations in the state last month due to air quality conformity issues in this region.

I believe we can do a much better job of integrating the STIP and MTIP processes for the '06 – '09 update. Two months ago, we forwarded the STIP update schedule to Metro staff. I will follow up with a meeting in early January to help align the two processes.0.2

DATE: December 10, 2003

TO: Chair Park and Members of the Joint Policy Advisory Committee on Transportation

FROM: Matthew Garrett, Region 1 Manager

SUBJECT: Response to Comments on 2004 – 07 State Transportation Improvement Program

Thank you for your interest in the 2004 – 07 State Transportation Improvement Program (STIP). This is to respond to your questions regarding ODOT priorities.

- 1) **Modernization Projects:** You asked why Region 1 has reserved uncommitted modernization funds in the '04 – '07 STIP. I manage a large portfolio consisting of over \$120 million in construction projects. The uncommitted dollars are needed to cover unanticipated project overruns. They are also available to provide match and possible backfill for projects for which we are requesting federal earmarks as well as for contributions toward the South Corridor Project. The reserves provide me with the flexibility to respond to these issues and other contingencies as needed.
- 2) **Project Development for Future Modernization Projects:** You asked which projects will be prioritized for project development during the next few years. As you noted, most of the big highway projects in the region require extensive environmental analysis prior to construction.

ODOT has programmed environmental dollars for the Sunrise Corridor, the I-5/99W Connector, and I-5 (both Delta Park and the Columbia River Bridge Crossing) projects. All of these projects will respond to critical needs identified through the Region 2040 process including serving the Damascus area, opening up new lands for industrial development and keeping the I-5 corridor viable for the movement of freight and commerce.

Uncommitted dollars for Preliminary Engineering (PE) and right-of-way (R-O-W) in '06 and '07 are reserved to get these and other projects ready for construction in the outlying years of the STIP.

- 3) **Preservation, Safety and Bridge Program Coordination with Local Jurisdictions:** You asked for ODOT to improve coordination on its preservation, safety and bridge projects. I share this important goal.

The Oregon Transportation Commission (OTC) establishes statewide program levels for preservation, safety, and bridge and modernization projects to balance operational needs with new construction. For example, the preservation targets are designed to prevent pavement from deteriorating to unacceptable (and ultimately extremely costly) levels. The agency uses management systems to identify the highway segments in the state with the greatest needs.
