& RESOURCES for
maximum Benefit to
local Governments

IRNE

Portland's Integrated Regional Network Enterprise

www.IRNet.net

The **Integrated Regional Network Enterprise**

is the **tool** for leaders in *e-Government*,

providing the **model** for network **capacity**,

linkage and *flexibility*.

Benefits to New Partners in Local Government

1. e-Government: Highly reliable, high bandwidth network capacity for voice, video and data.
2. Unified Strategy: Implement compatible devices, networks, network management strategies, replacement cycles and application platforms for partner agencies.
3. e-Commerce: High-speed applications for advanced public services to support continued economic development in our Oregon communities.
4. Economic Development: Develop our telecommunications infrastructures to promote e-commerce employers and open access Internet solutions for citizens.
5. Crossing the Digital Divide: Bringing advanced telecommunications services to all agencies.

Services

- **SONET**
- **Gigabit Ethernet**
- **Fast Ethernet**
- **Interconnection**
- **Telephone Service**
- **Video**
- **Long Distance**
- **Managed Networking**

The Integrated Regional Network Enterprise (IRNE) is a broadband telecommunications network that will carry all voice, video and data communications for the City of Portland and its partner locations. IRNE is a high-capacity, high reliability design that does more and costs less than commercial offerings.

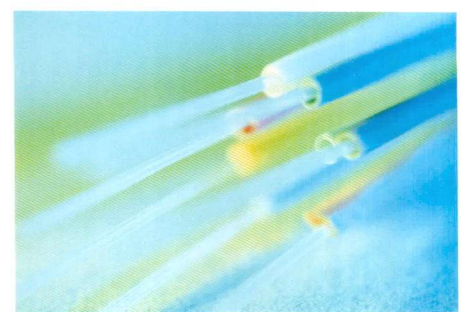

Engineered for Zero Down Time

IRNE offers a private network solution of loop architecture and redundancy optimized to public safety grade reliability. As e-Government and electronic learning technologies become increasingly pervasive, engineering for reliability becomes extremely important to our citizens and constituents.

An Advanced Telecommunications Network shared by a team of partners. By becoming a member of IRNE, partners receive:

1. Dedicated connectivity among organizations throughout the regional network.
2. Access for smaller governments and agencies to participate in an established telecommunications network without large capital expenditures.
3. Millions of dollars of network assets leveraged for reliability, better management, cost control, and advanced abilities to create electronic highways in our region and state.
4. A fully realized network designed to save local governments millions of dollars in networking costs.
5. Substantial discounts on advanced services.
