

BEFORE THE METRO COUNCIL

FOR THE PURPOSE OF ACKNOWLEDGING) RESOLUTION NO. 13-4454
THE WORK COMPLETED TO DATE AND)
INITIATING FURTHER REVIEW OF THE) Introduced by Councilor Kathryn Harrington
REGIONAL ACTIVE TRANSPORTATION)
PLAN PRIOR TO ADOPTION AS A)
COMPONENT OF THE REGIONAL)
TRANSPORTATION PLAN)

WHEREAS, the Metro Council, with the advice and support of the Metro Policy Advisory Committee (“MPAC”) and the Joint Policy Advisory Committee on Transportation (“JPACT”), adopted the 2035 Regional Transportation Plan (“RTP”) in 2010 by Ordinance No. 10-1241B; and

WHEREAS, the RTP supports the completion of a fully developed regional active transportation network and identifies development of a Regional Active Transportation Plan (“ATP”) as an implementation activity that is a critical part of the identified strategy to develop the regional active transportation network; and

WHEREAS, planning and implementing a regional active transportation network is a component of the region’s work to develop vibrant, prosperous and sustainable communities with safe and reliable transportation choices, that minimize greenhouse gas emissions and that distribute the benefits and burdens of development equitably in the region; and

WHEREAS, the Metro Council adopted Resolution No. 11-4239 (For the Purpose of Supporting Development of a Regional Active Transportation Plan) directing staff to apply for a Transportation Growth Management grant application to the Oregon Department of Transportation to help fund development of the Regional Active Transportation Plan; and

WHEREAS, Metro worked with the Executive Council for Active Transportation, Metro’s advisory committees and a regional Stakeholder Advisory Committee comprised of staff and representatives from Clackamas, Multnomah and Washington counties, the cities of Cornelius, Fairview, Forest Grove, Gresham, Hillsboro, and Portland, the Oregon Department of Transportation, TriMet, and other stakeholders representing public health, parks and active transportation perspectives to develop the Draft ATP; and

WHEREAS, the Draft ATP recommends updates to the RTP regional pedestrian and bicycle networks and functional classifications, and new projects, design guidelines, policies and implementing actions that will help achieve the region’s Six Desired Outcomes and existing RTP goals, objectives and performance targets; and

WHEREAS, the Metro Council, JPACT, MPAC, Metro Technical Advisory Committee (“MTAC”), Transportation Policy Advisory Committee (“TPAC”) and the Stakeholder Advisory Committee have considered the Draft ATP and recognize that additional review of the draft plan is needed as part of the comprehensive update of the RTP in 2013-14; and

WHEREAS, the Draft ATP project list will be available for cities, counties and agencies to consider and to propose specific projects for Metro's incorporation into the RTP as part of the update to the RTP in 2013-2014; and

WHEREAS, MPAC and JPACT have accepted the draft plan to formally acknowledge the work completed to date with the understanding that there will be opportunities for further review and refinement of the Draft ATP before any recommendations are included in the comprehensive plan update of the RTP in 2014; NOW THEREFORE

BE IT RESOLVED that the Metro Council:

1. Acknowledges the Draft Regional Active Transportation Plan, attached to this resolution as Exhibit A, to formally acknowledge the work completed to date.
2. Directs staff to provide opportunities for further review and refinement of the plan by local governments, ODOT, TriMet and other stakeholders through the comprehensive update of the Regional Transportation Plan and prepare amendments to the Regional Transportation Plan for final public review as part of the Regional Transportation Plan update in 2014.
3. Declares that Resolution No. 13-4454 does not adopt the Draft Regional Active Transportation Plan or direct local plans. The resolution acknowledges the draft plan for final review and refinement as part of the Regional Transportation Plan update in 2014, to be considered for adoption by ordinance as a component of the Regional Transportation Plan following public hearings in 2014.

ADOPTED by the Metro Council this 26 day of September, 2013.

Approved as to form:

MAKING A
GREAT
PLACE

REGIONAL

ACTIVE

TRANSPORTATION PLAN

REVIEW DRAFT 2

AUGUST 2013

About Metro

Clean air and clean water do not stop at city limits or county lines. Neither does the need for jobs, a thriving economy, and sustainable transportation and living choices for people and businesses in the region. Voters have asked Metro to help with the challenges and opportunities that affect the 25 cities and three counties in the Portland metropolitan area.

A regional approach simply makes sense when it comes to providing services, operating venues and making decisions about how the region grows. Metro works with communities to support a resilient economy, keep nature close by and respond to a changing climate. Together we're making a great place, now and for generations to come.

Stay in touch with news, stories and things to do.

The development of a Regional Active Transportation Plan (ATP) was identified as an implementation activity in the 2035 Regional Transportation Plan (RTP). The plan provides a vision, plan and policies for active transportation to help achieve local and regional aspirations and transportation goals and targets.

The ATP will be refined with stakeholder input for integration into the RTP during the 2014 update. Changes to the Regional Transportation Functional Plan (RTFP) will be addressed in the 2018 update of the RTP.

For more information, visit the Regional Active Transportation Plan webpage at www.oregonmetro.gov/activetransport

This project is partially funded by a grant from the Transportation and Growth Management (TGM) Program, a joint program of the Oregon Department of Transportation and the Oregon Department of Land Conservation and Development. This TGM grant is financed, in part, by federal Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU), local government, and State of Oregon funds. The contents of this document do not necessarily reflect views or policies of the State of Oregon.

Active transportation is getting where you need to go actively. Walking, riding a bicycle, using a mobility device and accessing public transportation are all active travel.

“Community members want to walk and bicycle more. This plan for our young 21st Century will help our area compete for more funding opportunities and implement our community needs and desires.”

~Kathryn Harrington, Metro Councilor

EXECUTIVE SUMMARY

Promoting, encouraging and making it easy to get around actively is critical to the health, economy and well-being of our region. Whether walking, bicycling, using a wheel chair or an electric bicycle, catching a bus, the MAX or a streetcar, pushing a stroller, skateboarding or in-line skating, active travel is a vital part of the region.

Over 18% of trips are made by walking and by bicycle within the region. The benefits of those trips are many.¹ Compared to other places, our region reports better overall health, reducing health care costs and increasing worker productivity.² Providing transportation choices benefits the economy by attracting new businesses and skilled workers. Bicycling tourism and activities generate \$89 million in annual economic activity for the region.³

People walk, ride bikes and use active travel for all types of trips – to catch the bus or train, get to school and work, go to the store and run errands, and visit friends.

¹ 2011 Oregon Household Activity Survey. Mode share is for urban and rural areas of Clackamas, Multnomah and Washington Counties. Bicycling 3.2% of all trips made within the counties, walking 10.4% and walk-bicycle access to transit 4.2% (walk-bike to transit are additional trips). For all trips less than three miles made within the urban growth boundary the mode shares are: bicycling 5.1% and walking 19%, for over 24% of all trips made by walking and bicycling (2010 Metro transportation modeled data).

² Obesity-related health spending in the U.S. reached \$147 billion in 2009 and accounts for 91% of all medical spending. (U.S. Department of Health and Human Services Secretary Kathleen Sebelius, 2009); Workplace physical activity programs, such as encouraging walking and bicycling to work, can reduce sick leave by up to 32% and increase productivity by up to 52%. (World Health Organization. Southern Australian Workplace Physical Activity Resource Kit. 11/2/10); Regular physical activity, such as walking or riding a bicycle to work, can improve an employee's work performance by up to 15%. (Alberta Center for Active Living).

³ *The Economic Significance of Bicycle-Related Travel in Oregon, 2012.* Dean Runyan and Associates.

Drive alone trips are declining per capita, helping freight move more smoothly by reducing the number of cars on the road. Children, elders, the disabled and people that cannot afford to drive all benefit when they can access safe and convenient walking, transit and bicycle routes. The Regional Active Transportation Plan, or the ATP, provides a strategy to build on our success, knitting local plans together into a regional vision to achieve our aspirations.

Investing in active transportation shapes our region in ways we all care about

- It keeps us healthy.
- It makes our streets safer.
- It helps our economy thrive.
- It provides transportation choices for everyone, especially the young, old, poor, disabled and those that cannot or choose not to drive.
- It helps us fight climate change and helps keep our water and air clean.
- It provides access to nature.
- It provides independence for our children and our elders.
- It supports vibrant and safe communities.
- It reduces household expenses.
- It is clean, efficient and easy. It is low cost.
- It is cost effective and provides a high return on investment.

Public desire for transportation choices

Over 65% of residents in Multnomah, Clackamas and Washington Counties would like more walking and bicycling paths and facilities.

~ Opt-In Survey, 2012

A national poll found that most residents would like to drive less, but do not believe it is a realistic option for them. Over 70% feel that they have no choice but to drive as much as they do.

~ Natural Resources Defense Council, September 2012

Peninsula Crossing Trail, Photo: BikePortland

*Increasing the number of trips made actively reduces auto traffic and keeps roadways running smoothly.
Photo: City of Portland, Hawthorne Bridge.*

What challenges does the ATP address?

Policies and strategies in the ATP focus primarily on completing, expanding and upgrading the regional active transportation network as one way to help address personal mobility and access, economic health, human and environmental health, safety and climate change. Complete and well designed pedestrian and bicycle facilities are part of the solution. However, investment in infrastructure alone does not automatically provide more travel options. Land use, pricing policies and other strategies are also ways that communities are addressing these challenges.

Our region is not achieving all of its transportation targets. While nearly 18% of all trips made in the region are made by walking and bicycling, this is far below what is needed to achieve many of our local and regional aspirations and to continue successful trends.⁴ The region has an

⁴ The current RTP does not meet several of the 2035 RTP transportation performance targets:

1. Total average weekday VMT increases. However, VMT per person continues to decrease.
2. Traffic delay on the regional freight network increases significantly. The cost of delay increases over five fold. Motor vehicle delay increases for travel periods and origin-destinations.
3. Modest increases in transit travel times. Corridors with significant increase in transit service see travel time savings.
4. Congestion increases.
5. System wide, non-drive alone trips increase only slightly (2%). All centers and the City of Portland had the highest increase in non-drive alone trips.⁴
6. Average weekday boarding of transit increase by 40%.
7. When comparing both 2035 RTP Investment Systems to the 2035 No Build, approximately 23% more households are within ½ mile of a regional trail.
8. Environmental justice households access to high capacity transit increases by at least 13%.
9. There is significant reduction in transportation related air pollutants.

active transportation mode share target to triple levels of walking, bicycling and transit by 2035. Transportation modeling conducted for the ATP indicates that current policies and plans do not achieve regional mode share targets.⁵

If we are to address issues such as economic competitiveness, freight mobility, climate change, rising levels of obesity and safety effectively we must rapidly increase the levels of active transportation by making it safe, convenient and comfortable. Development of the ATP was identified as a follow up activity in the 2035 Regional Transportation Plan to help addresses these challenges.

The region’s planned pedestrian and bicycle networks have major gaps.⁶ These gaps impact safety and discourage people from choosing to walk, ride a bike or take transit. Many people would like to walk and ride bicycles more for transportation, but feel unsafe doing so. The fears are justified; serious pedestrian and bicycle crashes account for 20% of all serious crashes in the region. Pedestrian and bicycle crash rates are higher than their share of trips.

At the same time, federal funding, a major source of funding for active transportation, is

Network completeness

Regional trails/paths: 33% complete

Regional bike network: 55% complete

Regional pedestrian network of sidewalks: only 62% of all roadways in the regional pedestrian network (primarily arterials) have sidewalks.

-
- 10. Green house gas emissions increase by at least 41%.
 - 11. More projects intersect in high value habitat

5

| Active transportation mode | 2010 modeled mode share for all trips (4-county area) | 2035 modeled mode share for all trips with full build out of 2035 State RTP Network | Active Transportation Target (tripling of 2010 modeled mode share) |
|----------------------------|---|---|--|
| Transit | 3.8% | 4.9% | 11.4% |
| Walking | 8.9% | 9.6% | 26.7% |
| Bicycling | 2.8% | 3.1% | 8.4% |

2011 Oregon Household Activity Survey and modeled data, Metro 2012

⁶ The regional bicycle and pedestrian network is defined as the combined network of streets, trails and districts identified on the regional transportation pedestrian and bicycle network maps and identified as Pedestrian and Bicycle Parkways, Regional Bikeways, Regional Pedestrian Corridors and Regional Pedestrian and Bicycle Districts, including station communities.

declining.⁷ Current policies and planned levels of investment only get the region so far; filling some of the gaps and improving some of the deficiencies, but not to the level needed to make walking and bicycling the easy, safe and enjoyable choice.

The ATP provides strategies to address the challenges

The ATP provides a vision, a plan and policies for our region to compete more effectively for limited funding and to make the most of our investments to complete and expand walking and bicycling networks, and to improve access to transit.

- **Vision.** A bold vision for the future that builds on local plans, existing investments and successes.
- **Plan.** The plan knits together local projects and routes to achieve complete and seamless networks that make accessing destinations easy, comfortable and safe.
- **Policies.** A set of policies and actions to help achieve local and regional plans, desired outcomes, goals and targets.

Opportunities to expand active transportation

There are several opportunities to expand the active transportation networks that are already in place and to increase levels of active transportation. The ATP was developed to target the following opportunities:

- **Support populations that are already driving less by making it easier to drive less.** Lower income households, people with disabilities, young people and people of color use active transportation and transit more often than other populations in the region.⁸ Improving transportation choices and providing education and encouragement increases transportation equity and makes it easier to drive less.

ATP Vision

In 2035, convenient and safe access to active transportation has helped create and maintain vibrant communities in the region. Connected and safe pedestrian, bicycle and transit networks provide transportation choices. People of all ages, abilities, income levels and backgrounds can walk and bike easily and safely for many of their daily needs and the walking and bicycling environment is welcoming to them. A majority of the short trips in the region are made by bicycling and walking. Children enjoy independence walking and biking to school and elders are aging in place and can get around easily without a car. Active transportation contributes significantly to the region's economic prosperity. Household transportation costs are lowered, roadways are less congested and freight experiences less delay. People enjoy clean air and water, and because they incorporate physical activity into their daily routines they are healthier and happier.

⁷ Metro 2010. Federal funding programs, primarily administered by ODOT, TriMet and Metro, accounts for approximately 85% of the funding for active transportation in the region. State funding, from the state gas tax accounts for approximately 7% and local funding sources account for approximately 8%.

⁸ 2011 Oregon Household Activity Survey.

- Dramatically increase safety for people walking and riding bicycles by focusing improvements for active transportation on arterials, intersections and mid-block crossings of busy streets.** A high level of walking and bicycle activity and accessing transit occurs on arterials; these roads often provide the most direct and efficient route and provide services and destinations. The 2012 Regional Transportation Safety Plan recommends improving pedestrian and bicycle crossings particularly on multi-lane arterials, improving lighting and providing protected bicycle facilities along high-volume and/or high-speed roadways such as buffered bike lanes, cycle tracks, multi-use paths, or low-traffic alternative routes.
- Better integrate transit, walking and bicycle networks.** Region wide, nearly 85% of all transit trips start as a walking or bicycling trip.⁹ Improvements that benefit walking and bicycling benefit transit. Better access to transit allows people to access destinations without a car. Integration strategies include completing the “last mile” between transit stops and regional destinations, including bicycle parking at transit stops, and coordinating wayfinding.
- Replace short trips made by car with walking and bicycling.** This will reduce congestion, lower green house gas emissions, lower transportation costs, reduce wear and tear on roadways and increase health in the region. Nearly 45% of all trips made by car in the region are less than 3 miles.¹⁰ With complete networks and education and encouragement and other programs, many short trips made by car could be replaced with bicycle or pedestrian trips, increasing road capacity and reducing the need to expand the road system.
- Include bicycle and walking improvements in roadway preservation projects** whenever possible to make all streets in the region complete streets.
- Tap into the bicycling potential.** Increasing the number of bicycle trips in the region has huge potential. Since 1994, trips made by bicycle in the region have increased over 190% – the fastest growth for any mode.¹¹ Much of the growth in bicycling occurred in the City of Portland; however, in the areas outside of Portland in Clackamas, Multnomah and Washington counties bicycling mode share increased

Replacing 6-21% of short trips under three miles made by auto with walking and bicycling would avoid 21- 52 billion miles of driving annually in the U.S.

~Rails to Trails Conservancy, Active Transportation for America, 2008

⁹ Levels of walking, bicycling and transit ridership, and how transit is accessed, varies across the region. The 2011 Oregon Household Activity Survey provides data at the regional and county level and for the City of Portland. Survey sample sizes are too small to provide detailed data for all the cities in the region.

¹⁰ 2011 Oregon Household Activity Survey. Refer to the “Existing Conditions, Opportunities and Findings (2012)” report for a table of regional trip distances.

¹¹ 2011 Oregon Household Activity Survey.

from 0.7% to 1.5%, which is higher than the national average.¹² Making bicycling a real transportation option can help the region achieve its transportation goals. The City of Portland estimates that if its 25% bicycling mode share target is not reached and bicycling levels remain the same the city will need the equivalent of 23 more Powell Boulevards to accommodate the increase in auto traffic.

A vision for the future that includes active transportation as a real transportation option helps us achieve our shared values – clean air and water, vibrant communities, transportation choices for everyone, equity, economic prosperity and addressing climate change. The challenges can be daunting in the face of declining funding and other important needs. However, the region cannot afford not to invest in active transportation.

Active transportation builds community and provides independence to those who cannot drive.

¹² Refer to Table 1 in Chapter 3

CHAPTER 1: INTRODUCTION

The ATP is a regional modal plan of the Regional Transportation Plan and helps shape transportation policy and development of the regional transportation network. As knowledge of the far-reaching benefits of active transportation has increased, the need for an agreed upon implementation strategy and framework for identifying priorities was acknowledged. Development of the ATP was identified as an implementation activity of the 2035 Regional Transportation Plan. Development of the ATP was guided by a Stakeholder Advisory Committee and input from key stakeholders.

What are the elements of the ATP?

The ATP provides a vision, policies and actions to take advantage of opportunities to increase active transportation. The following elements are included in the ATP:

- **Benefits of active transportation** include lower health care costs, support of the local economy, lower household transportation costs and reduction in green house gas emissions. Chapter 2.
- **Findings and opportunities.** Understanding the successes and challenges of existing conditions helps communities make smart choices. Chapter 3.
- **Policy context.** Goals and policies of the ATP exist within a framework of federal, state and local plans. Chapter 4.
- **A vision** for the role active transportation can play in achieving the region's desired outcomes. Benefits associated with active travel play a role in achieving adopted regional outcomes. Chapter 5.
- **Guiding principles** to guide development of the active transportation network that will support achieving regional transportation goals. Evaluation criteria were identified to evaluate how well planned regional networks achieved Access, Safety, Equity and Increased activity. Chapter 6.
- **Evaluation** to guide development of the recommended regional bicycle and pedestrian networks. Using data, GIS analysis and transportation modeling, potential improvements to the regional active transportation network were evaluated to evaluate the impact of improvements on access, safety and equity. Chapter 7.
- **An integrated active transportation network** is a new focus of the regional pedestrian, bicycle and transit networks. Access to transit is emphasized in the updated pedestrian and bicycle network concepts. Chapter 8.

Active transportation helps achieve the region's desired outcomes

1. **Vibrant communities**
2. **Equity**
3. **Climate change leadership**
4. **Transportation choices**
5. **Economic prosperity**
6. **Clean air and water**

- **Recommended regional bicycle and pedestrian networks** built on the existing pedestrian and bicycle networks in the 2035 Regional Transportation and local plans. Planned networks provide a vision for complete connected networks that are integrated with transit and provide the regional “spine.” Chapters 9 & 10.
- **New and updated functional classifications** for the bicycle and pedestrian networks clarify how regional active transportation routes function in the broader transportation network. Many active transportation routes are also routes used by freight and transit. Pedestrian and bicycle functional classes describe the ideal vision for routes, with the understanding that plans and projects need to be developed in a context sensitive manner and integrate all modes. Chapters 9, 10 & 11.
- **Design guidelines** will help achieve a consistent network across the region. Design is especially important for people walking and riding bikes on or crossing busy roadways and on trails with high volumes of users. Design can improve safety for all users and make the transportation system work better. The suggested guidelines are based on accepted best practices and are already being implemented in the region. Chapter 11.
- **Policies and implementation actions.** The ATP recommended policies build on existing regional policies for walking and bicycling in the 2035 Regional Transportation Plan and suggest specific follow up actions to help implement policies over time. Implementing the recommended policies will require Metro to work closely with jurisdictions, agencies and stakeholders. Chapter 12.
- **Modal targets and performance measures** in the 2035 Regional Transportation Plan are updated. Chapter 13.
- **Funding strategies** acknowledge that funding is limited and suggest ways to approach funding the regional active transportation network. Chapter 14.
- **Implementation strategies and projects.** The 2035 Regional Transportation Plan identifies many of the pedestrian and bicycle projects needed to complete the regional active transportation network. However there are gaps in the project list. The ATP identifies areas in the region where investments in active transportation will increase access to destinations and serve underserved populations and increase safety and increase pedestrian and bicycle activity.¹³ Chapter 15 and Appendix 1.
- **Planning process and stakeholder engagement** describes how the plan was developed. Chapter 16.

¹³ Underserved populations include low income, low-English proficiency, non-white, elderly (over 65) and young populations (under 18).

Regional bicycle and pedestrian networks knit together priorities identified in local plans. Making places safe, comfortable to walk, ride a bicycle, use a mobility device, push a stroller and catch a bus or train help implement a complete and integrated regional transportation system.

What is a regional bicycling and walking network?

A regional bicycling and walking network is formed by connecting the many local networks of the region's twenty-five cities and three counties. A regional plan that knits together local networks ensures a coherent, continuous, recognizable and easy to follow regional system. Local plans emphasize the need to provide good pedestrian and bicycle access to transit, schools, parks, jobs, services and other essential destinations; a regional plan emphasizes this need at a regional level.

The ATP provides a plan for the area within Metro's jurisdictional boundary, which includes the urban portions of Multnomah, Washington and Clackamas Counties and twenty-five cities. Major bicycle and pedestrian connections to areas outside of the urban growth boundary, such as Sauvie Island, the Columbia Gorge, east Clackamas County and Mt. Hood, the Pacific Ocean and the Willamette Valley are also part of the system.

Walking and bicycling are a key part of an integrated regional transportation system:

“Multi-modal regional transportation facilities and services are defined both functionally and geographically. Specific facilities or services are included in the RTP based on their function within the regional transportation system rather than their geometric design, ownership or physical characteristics. A facility or service is part of the regional transportation system if it provides access to any activities crucial to the social or economic health of the Portland metropolitan region, including connecting the region to other parts of the state and Pacific Northwest, and providing access to and within 2040 Target Areas (described below). Facilities that connect different parts of the region together by crossing county or city boundaries are crucial to the regional transportation system. Any link that provides access to or within a major regional activity center such as an airport or 2040 target area is also a crucial element of the regional transportation system.”¹⁴

How will different communities implement the network?

Communities in the region are already implementing their pedestrian and bicycle networks in ways that reflect their unique character. Local biking and walking projects often highlight special places in a community and become special places in their own right, places such as the Fanno Creek Trail, the Going Street bicycle boulevard, the Trolley Trail or the Gresham-Fairview Trail.

Communities across the region acknowledge the value of making it easy and safe to walk and ride bicycles to access schools, parks, transit, jobs and daily needs. How communities provide connections may take different approaches. Land use patterns and street network design ensure that a ‘one-size-fits-all’ approach will not work everywhere. For example, a community with a grid street network may implement a network of bicycle boulevards on low traffic streets, while a community with less street network connectivity might develop trails parallel to major continuous streets.

Communities identify individual needs and opportunities for their transportation networks in transportation system plans and capital improvement plans. Many cities and each of the counties have also developed stand alone pedestrian and bicycle plans.¹⁵ The ATP does not replace these plans, but instead attempts to provide a cohesive regional vision knitting these plans together that will support communities in achieving local goals for increasing walking and bicycling access.

¹⁴ Chapter 2, Regional Transportation Plan

¹⁵ Refer to Appendix 3 for a list of local plans reviewed in the development of the ATP.

How does the ATP move forward?

The draft ATP will be refined with stakeholder input through June 2014, including a public comment period in March 2014. Changes to the Regional Transportation Plan will be proposed as part of the 2014 update. The ATP will be proposed for adoption as a component of the Regional Transportation Plan in July 2014. The ATP project list, provided in Appendix 1, will be available to cities, counties, TriMet, ODOT and the public as a resource for developing changes to the Regional Transportation Plan project list. Implementation activities identified in the recommended policies section will occur over time and as funding and resources are available. Potential changes to the Regional Transportation Functional Plan, the implementing plan of the Regional Transportation Plan may be considered in the 2018 update of the Regional Transportation Plan.

Regional coordination can help communities implement projects that require strong partnerships, vision and leadership, such as the Three Bridges project on the Springwater Corridor.

CHAPTER 2: BENEFITS OF ACTIVE TRANSPORTATION

Studies show that integrating active transportation into daily routines improves physical health and well being.

There are numerous economic, social, health and environmental benefits of active transportation. With relatively low levels of investment the region has constructed miles of pedestrian walkways, bikeways and trails, often connected to transit. These investments, combined with land use patterns and development that encourage active transportation, have contributed significantly to the livability of the region. People are healthier compared to national and state averages. People drive less and shorter distances. More money is kept circulating in the local economy. There are fewer crashes. Air and water are cleaner. Though walking and biking networks are incomplete, they already provide a substantial return on investment. The ATP evaluation of planned and potential improvements to the regional pedestrian and bicycle networks provides information on the potential direct and derived benefits our region will experience as walking and bicycling investments improve safety and increase access to destinations.¹⁶ Below are a few of the benefits associated with investing in the regional pedestrian and bicycle networks.

¹⁶ Refer to the *ATP Benefits of Active Transportation and Considerations for Implementation* Report, 2013.

- **Investing in the active transportation network improves public health and lowers health care costs associated with inactivity.** People in the region are more active and have lower rates of obesity compared to national and state levels.¹⁷ However, at least 26% of adults in the Portland-Vancouver area are obese and only 54-55% of adults in Clackamas, Multnomah and Washington counties meet the Center for Disease Controls recommendations for physical activity.¹⁸ Improvements planned to the regional pedestrian and bicycle networks result in increased levels of active transportation.¹⁹ Active transportation is linked to reduced mortality and morbidity rates. A recent study in a peer reviewed journal found that by 2017, the City of Portland will have experienced a net positive return on investment in its bicycle infrastructure of \$500 million in healthcare savings and \$200 million fuel savings.²⁰

Walking and bicycling- transportation or recreation?

Walking (including using a mobility device) and bicycling are both transportation and recreation – and very often they are both at the same time. Many people like to ride a bicycle to work because it relaxes them and provides them with exercise. Children like to walk to school because they can socialize and feel independent. Running an errand by way of a park provides time to enjoy nature. With active transportation the lines between utility and enjoyment are blurred. One more benefit of active travel!

¹⁹ATP Regional Bicycle Network Evaluation, 2013 and ATP Regional Pedestrian Network Analysis, 2013.

²⁰Gotschi, Thomas. Costs and benefits of bicycling investments in Portland, Oregon. *Journal of Physical Activity and Health*, 2011,8(Suppl 1), S49-S58.

- **Investing in the active transportation network improves safety and reduces the cost of crashes.** Filling sidewalk gaps, constructing trails, adding improved crossings and separated bicycle facilities will reduce crashes in the region.²¹ Investments in active transportation have been shown to reduce all crashes.²² Metro’s State of Safety Report found that crashes and the resulting injuries and deaths cost the region \$958 million a year in property damage, medical costs, and lost productivity – not to mention the pain and suffering from the loss of life.²³ Over \$122 million of the costs are associated with pedestrian and bicycle crashes alone.²⁴

- **Investing in the active transportation network protects the environment and reduces costs associated with polluted air and climate change.** More transportation choices results in people driving less. This translates into less green house gas emissions (transportation is responsible for about 25% of the region’s green house gas emissions).²⁵ For every 1-mile pedaled or walked rather than driven, nearly one pound of carbon dioxide is saved.²⁶ Investing in the active transportation network in

Health Connection

Evidence connecting health and the built environment is growing. Obesity related health care costs reached \$147 billion in 2009 and accounts for 91% of all medical spending. To fight obesity and improve public health, the Centers for Disease Control recommend strategies that make it easier and safer to walk, ride bicycles and access transit. Recommended strategies for communities include:

- Improve access to transit.
- Enhance biking and walking infrastructure.
- Zone communities for mixed-use development.
- Locate schools near residential areas.
- Enhance safety where people are or could be physically active.
- Enhance personal safety in areas where people are or could be physically active.
- Improve access to outdoor recreational activities.

~ Center for Disease Control, “Recommended Community Strategies and Measurements to Prevent Obesity in the United States, Morbidity and

low-income and minority neighborhoods will result in better air quality in these areas, where air pollution is often an issue.

- **Investing in the active transportation network increases access to destinations.** New connections in the regional pedestrian network would substantially increase the number of people that are within a safe and protected 1 mile walk of transit, parks, food, civic, health, and retail locations. The recommended regional bicycle network contains 60% greater network mileage than the current network. The increased network density and connectivity will put more people in the region within access of destinations.²⁷ Improving the pedestrian and bicycle networks to allow for convenient biking and walking access to transit increases access to destinations.
- **Investing in the active transportation network lowers household transportation expenses and keeps more money circulating in the local economy.** By driving less household transportation costs are reduced. A vehicle costs about \$10,000 a year to own and operate, second only to housing costs for the typical household.²⁸ The region already keeps an estimated \$800 million circulating in the local economy every year due to less driving.²⁹
- **Investing in the active transportation network is cost effective.** Active transportation projects are cheaper to build and maintain compared to auto related projects, while providing a high return on investment. Regionally, approximately 3% of federal and state transportation funding for capital projects is spent on pedestrian and bicycle projects, while 18% of all trips are made by walking and bicycling.³⁰ The City of Portland estimates that its current 300+ mile bikeway network was constructed for the approximate cost of one freeway interchange- \$60 million.³¹ Other jurisdictions have

²⁷ *ATP Benefits of Active Transportation and Considerations for Implementation Report*, 2013.

²⁸ *ATP Benefits of Active Transportation and Considerations for Implementation report*. Within the Portland region, working households spent 28 percent of their income on housing and 31 percent on transportation. On average, working families spend \$10,383 on transportation. Driving includes the cost of owning a personal vehicle, gas, insurance, parking, and maintenance. Driving is more costly than bicycling or walking.

documented even lower costs for building bicycle projects.³² Constructing active transportation related projects creates more jobs than traditional roadway projects.³³

- **Investing in the active transportation network supports tourism, jobs and industry in the region.** Providing active transportation infrastructure has been identified as a crucial element to attracting a skilled and quality workforce to the region.³⁴ In Portland, 68% of businesses involved in the SmartTrips Business program said that promoting biking and walking helped them market their business.³⁵ A study of several different communities in the region, both urban and suburban, found that while car drivers spend more at supermarkets and restaurants than the other transport modes, walkers, bikers, and public transport users visit the locations more frequently, and thus, over the space of a month, spend more.³⁶ And, the region benefits from \$89 million a year in bicycle related tourism.³⁷
- **Investing in the active transportation network supports development.** A Metro supported study found that public investment in high quality streetscapes, bicycle facilities, and transit service can “tip the scale” in the direction of development feasibility.³⁸ People are willing to pay more for homes that allow them to walk or bike rather than drive.³⁹
- **Investing in the active transportation network increases transportation choices.** Completion of the recommended regional pedestrian and bicycle networks would increase transportation choices, including the choice for transportation for many more people in the region. Seventy-five percent of respondents to an Opt-In poll indicated that more dedicated bicycle lanes would encourage bicycle riding for transportation on a more frequent basis.⁴⁰

⁴⁰ Active Transportation Survey Results, Opt-In Survey 2011.

- **Investing in the active transportation network addresses the needs of our most vulnerable residents and those that are “active transportation dependent.”** Young people, poor and disabled people may not have the choice of driving. When the pedestrian and bicycle networks are incomplete, making access to transit more difficult, the most vulnerable suffer and feel unwelcome.

Are there negative impacts associated with active transportation?

The direct and derived benefits associated with active transportation are numerous. However, implementing active transportation projects can sometimes be challenging and raise concerns. These concerns are valid and should be addressed as projects are planned and developed, keeping in mind the benefits that active transportation provides and the trade-offs of not investing in active transportation. Common concerns include:

- **Environmental impact of new facilities on habitat and wildlife in environmentally sensitive areas.** As transportation projects are planned and developed impact on the environment must be taken into consideration along with safety and other impacts. Sensitive habitats and resources, such as wetlands, should be avoided when possible. Where not possible, sensitive design should be used to mitigate and reduce impacts.
- **Health impacts on people walking and bicycling in close proximity to auto exhaust.** Breathing polluted air impacts health. Recent Health Impact Analysis for the Climate Smart Scenarios project found that the benefits of increased physical activity outweighs the adverse effects of more exposure to auto pollution. Adding buffers of landscaping and trees along walking and bicycling routes help clean the air, reduce noise pollution, make the experience more pleasant and sometimes add habitat connectivity.
- **Reduced roadway capacity for auto and freight.** Adding missing pedestrian and bicycle facilities to roadways can impact other transportation modes, including transit and freight. These impacts should be minimized and the goal should be to integrate all modes so that all can function well. “Road Diets” are one way to reconfigure limited roadway space in a way that allows for the inclusion of wider sidewalks and separated bicycle facilities such as buffered bicycle lanes. Road diets reduce the number of lanes from an even number, such as four or six, with two, three, or more lanes traveling in each direction, to an odd number of lanes, such as three or five, with a center turn lane, and usually allocate removed travel lane width to bicycle and pedestrian facilities. Road diets can have multiple safety and operational benefits, such as reducing the number of rear-end collisions, for autos, as well as pedestrians and cyclists.⁴¹

⁴¹ *ATP Benefits of Active Transportation and Considerations for Implementation Report, 2013.*

- **Potential for more walking and bicycling crashes.** There can be a concern that encouraging people to walk and ride bicycles more often and improving infrastructure to make it easier will expose people to a greater risk of being hit by a car. Studies show that in most cases more walking and bicycling can lower crash rates and make the system safer for all users. Streets that are safer for walking and bicycling are typically safer for people driving too.

Designing the transportation network to integrate all modes will help the region achieve its transportation goals and targets.

Active transportation is for all ages and abilities. Connecting walking and bicycle routes to schools is an important strategy to increasing levels of active travel and keeping kids healthy and independent.

“The Portland metro region has long been a leader around the country in promoting active transportation. ATP brings together everything we know to date about active transportation and presents a vision of what our region will look like with walking and bicycling as key components of our transportation system. Implementing the ATP is the next step in creating the vibrant, livable, and equitable community that we all seek. Transportation advocates, partners in other diverse disciplines, policymakers from all the regional jurisdictions, business leaders, and friends in the community can align and focus their work using the guiding principles and recommendations presented in the Plan.

~Philip Wu, MD, Kaiser Permanente Northwest Region

CHAPTER 3: FINDINGS AND OPPORTUNITIES

The *ATP Existing Conditions, Findings and Opportunities Report* provides information and analysis of the existing regional bicycle and pedestrian networks. Findings from the report are summarized below. Refer to the Supplemental Reports section for information on the detailed report.

- a) Regional levels of active transportation are increasing, especially bicycling. One in six of all trips in Multnomah, Clackamas and Washington counties are made by active transportation; 84% of all transit trips are accessed by foot or bicycle. The regional active transportation mode share increased 36% between 1994 and 2011, from 13.1% to 17.8% of all trips.⁴² The regional bicycle mode share increased by nearly 191%, from 1.1% to 3.2%. Walking increased by over 14%. The graphic below shows regional mode share levels in 2011. The majority of trips made in the region are made by auto.⁴³

Figure 1: 2011 Transportation Mode Share for the 3-County area

Source: 2011 Oregon Household Activity Survey for the 3-county area

Levels of walking and bicycling vary from community to community and are highly dependent on existing land use. Table 1, below provides additional detail on levels of walking, bicycling and transit use in the region.

⁴² 2011 Oregon Household Activity Survey and 1994 Travel Behavior Survey.

⁴³ Unless otherwise noted, demographic data cited in this section is from the 2011 Oregon Household Activity Survey.

Table 1: Mode Share by Place of Residence, 1994 and 2011

| Area | Walk% | | Bike% | | Transit% | | Auto% | |
|-------------------------|-------|------|-------|------|----------|------|-------|------|
| | 1994 | 2011 | 1994 | 2011 | 1994 | 2011 | 1994 | 2011 |
| Portland - Central City | 37.6 | 36.4 | 2.2 | 7.1 | 13.6 | 18.7 | 46.5 | 37.8 |
| Portland - Southwest | 12.4 | 6.7 | 1.2 | 1.3 | 2.6 | 5.6 | 83.8 | 86.3 |
| Portland - Northwest | 20.6 | 24.3 | 1.4 | 4.5 | 4.3 | 7.8 | 73.7 | 63.4 |
| Portland - North | * | 10.4 | * | 4.0 | 2.8 | 7.7 | 84.1 | 77.9 |
| Portland - Northeast | 10.4 | 15.9 | 0.8 | 9.8 | 4.6 | 5.8 | 84.2 | 68.5 |
| Portland - Southeast | 12.3 | 17.5 | 2.6 | 7.5 | 6.8 | 5.8 | 78.3 | 69.1 |
| Portland - East | 6.8 | 10.3 | 0.5 | 1.8 | 5.1 | 6.9 | 87.5 | 81.0 |
| Oregon - 3 Co Suburbs | 6.3 | 7.4 | 0.7 | 1.5 | 1.7 | 3.9 | 91.2 | 87.2 |
| Washington - Clark Co | 6.9 | 4.7 | 1.1 | 1.0 | 1.0 | 1.4 | 91.0 | 92.8 |
| 4-County Area | 8.7 | 9.2 | 1.1 | 2.8 | 2.9 | 4.2 | 87.3 | 83.8 |
| City of Portland | 13.0 | 15.0 | 1.6 | 6.0 | 5.5 | 6.6 | 79.8 | 72.4 |

*Travel Behavior Survey and 2011 OHAS. *There were insufficient bike samples in subarea 4 (Portland - North) in 1994-95. Combining bike and walk trips, the bike-walk mode share for subarea 4 households in 1994-95 was 13.1%.*

- b) Lower income households in the region make more of their trips using active travel, especially walking, than do households with higher incomes. As level of income increases, so does the percentage of trips made by auto. Households with annual incomes of less than \$35,000 make up to 25% of their trips walking, bicycling and taking transit.
- c) Non-white householders in the region make a greater percentage of their trips by walking, bicycling and transit than white householders. Non-white householders make 20.5% of all their trips by walking and bicycling and transit, while white householders make 15% of all their trips by walking and bicycling and transit.

Figure 2: Transportation Mode Share by Race, 4-county area

Source: 2011 Oregon Household Activity Survey

- d) Younger people in the region are making more trips by active transportation. For example, children under the age of 14 make over 23% of all walk trips (the highest of any age group) and over 15% of all bicycle trips in the region.
- e) People between the ages of 25 and 34 make nearly 25% of their trips using active modes, the highest level of any age group.
- f) People with disabilities rely on transit and walking more than people without disabilities. Nearly 7% of the population reports having a disability that affects their ability to travel. People with disabilities particularly rely on transit for travel.
- g) The majority of all trips made by auto in the region are for short trips. Over 66% of all trips made by autos within the 4-county area are less than six miles in length, nearly 44% are less than three miles in length, and nearly 15% are less than one mile in length.
- h) Current transportation plans do not achieve regional transportation targets. The 2035 Regional Transportation Plan project list does not achieve many of the region’s adopted transportation targets, including a decrease in drive alone trips and reductions in greenhouse gas emissions, congestion and vehicle miles traveled and travel delay. An increase in active transportation would help achieve all of these targets.⁴⁴
- i) Levels of investment in active transportation do not match demand or need. Nearly 18% of all trips in Multnomah, Clackamas and Washington counties are made by walking or

⁴⁴ 2035 Regional Transportation Plan performance targets and measures.

bicycle, while stand alone bicycle, pedestrian and trail projects have received approximately 3% of transportation capital funds.⁴⁵

- j) Many of the region’s arterial streets are also regional pedestrian and bicycle routes. Arterials often provide the most direct and efficient route for travel for all modes, especially in suburban areas where there may not be alternative parallel routes. Many essential destinations and services and transit stops are located on arterials. Regional trails and other pedestrian and bicycle routes intersect with arterials.⁴⁶
- k) Most serious pedestrian and bicycle crashes occur on arterials, at intersections and mid-block crossings. Over 52% of all serious bicycle crashes and 67% of all serious pedestrian crashes occur on arterials. Arterials have the highest crash incident rate of any facility type for all modes. Nearly 80% of serious and fatal pedestrian crashes occur at intersections and mid-block crossings and 52% of serious and fatal bicycle crashes occur at intersections.⁴⁷
- l) Women are still making fewer trips by bicycle than men, but that is changing. Women and girls are often seen as an “indicator species” for comfort of the bicycling environment. As the comfort and safety of the bicycling environment increases, so do the number of women and girls riding bicycles. Women in the region make 1.8% of their trips by bicycle, compared to 4% for men. However, the proportion of women riding bicycles is up 16.5% since 1994.

⁴⁵ 2010 Metro.

⁴⁶ 2012 Regional Transportation Safety Plan.

⁴⁷ Ibid.

Figure 3: Bicycle Mode Share by Gender, 1994 and 2011, 4-county area

Travel Behavior Survey and 2011 Oregon Household Activity Survey

- m) Existing conditions for cycling vary across the region and present different opportunities and challenges to increasing bicycle ridership. Large differences exist for factors that influence cycling such as road connectivity, road density, topography, permeability, land use mix/density, as well as the existing bikeways in the region in terms of bike network density, bike network connectivity and bikeway comfort. Urban and suburban areas may need different strategies to increase bicycling.⁴⁸
- n) Major regional pedestrian and transit corridors and districts lack sidewalks, have high levels of traffic and high traffic speeds. These corridors often provide the most efficient and direct routes and access to services and destinations.⁴⁹
- o) People want to make more trips by bicycle and foot. National, regional and local polls indicate that people support investment in active transportation. In Multnomah, Clackamas and Washington counties 86-91% of respondents in each county were interested in using a bicycle more often for transportation and between 70-79% stated that they were interested in walking more for transportation purposes.⁵⁰
- p) Lack of data on walking and bicycling, especially accurate counts of pedestrian and bicycle activity, make it difficult to adequately measure demand and performance. What does not get counted, does not count. Current transportation models do not adequately

⁴⁸ Existing Conditions, Findings and Opportunities report, 2012.

⁴⁹ Ibid.

⁵⁰ Metro Opt-In Survey, 2011

represent walking and bicycling. Adequate data will make sure that investments in bicycling and walking are cost efficient.

- q) Regional investment in walkable and bikeable communities is a contributing factor to people engaging in more physical activity and lower rates of obesity compared to national and state levels. Among other factors, the built environment, such as street connectivity/density and density and quality of pedestrian and bicycling infrastructure contribute to how much people, walk, ride bicycles and take transit.⁵¹
- r) Programs and education help reduce the number of trips made by auto in the region. Nearly 19% of the region's population has reduced their car trips as a result of Drive Less Save More, resulting in a conservative estimated 21.8 million reduction in vehicle road miles, which translates into a reduction of about 10,700 tons of CO₂. The City of Beaverton's Findley Elementary School reduced the number of autos dropping and picking up students from 800+ a day to 400 cars by introducing a Safe Routes to School Program.⁵²
- s) There are areas of the region with incomplete bicycling and walking facilities, less access to essential services and destinations, and higher concentrations of environmental equity issues and underserved communities, including communities in East Multnomah County; City of Portland east of I-205; areas of North Portland; areas along McLoughlin Blvd. and 82nd Avenue; areas of unincorporated Clackamas County; including the North Clackamas Revitalization Area; Forest Grove; Cornelius; Aloha and Beaverton.⁵³
- t) Crashes and the resulting injuries and deaths cost the region \$958 million a year in property damage, medical costs, and lost productivity. Studies have found that more people walking and riding bicycles make it safer to walk and ride a bicycle and increase road safety records for all users.⁵⁴
- u) Investments in active transportation have provided a high return on investment and multiple benefits to the region. Comparatively small investments in active transportation projects and programming have benefitted the region on multiple levels, including cleaner air and water, healthier people, lower transportation costs, increased development feasibility and safer streets.⁵⁵

⁵¹ Existing Conditions, Findings and Opportunities report, 2012.

⁵² Ibid.

⁵³ Ibid.

⁵⁴ Metro State of Safety Report, 2012.

⁵⁵ Existing Conditions, Findings and Opportunities report, 2012.

- v) Active transportation trips are being made for a variety of purposes, not just commuting. Active transportation trips are consistently undercounted due to a reliance on U.S. Census data which only collects information on travel to work. In the region, 19% of all trips to work, 15% of all trips to school, and 16% of all errands, entertainment and social trips are made by walking or bicycling.⁵⁶

Data is essential to effective planning, implementation and measurement. Accurate use counts are a key piece of data that is needed. Photo: BikePortland

“ODOT and Metro have recognized the need for an Active Transportation Plan. This would put walking and biking on a par with driving for transportation planning purposes.”

~Peter Goodkin, MD, Chair, Clackamas County Pedestrian and Bicycle Advisory Committee

⁵⁶ 2011 Oregon Household Activity Survey.

CHAPTER 4: POLICY CONTEXT

The ATP builds on and was developed within the context of existing state, regional and local visions and policies that support and promote active transportation. The ATP vision, guiding principles, recommended networks, policies and implementing actions described in the next chapters were identified to help implement state, regional and local visions, plans, goals and targets. Chapter 4 of the ATP Existing Conditions, Findings and Opportunities report describes the ATP policy framework in detail. A snapshot of existing visions is provided below.

- The **Oregon Transportation Plan** provides a transportation plan for the state and establishes “a vision of a balanced, multifaceted transportation system leading to expanded investment in non-highway transportation options”.⁵⁷
- The **2050 Oregon Statewide Transportation Strategy** provides a strategy and vision for reducing green house gas emissions.⁵⁸ The strategy describes a future Oregon that features: improved public transportation service, bicycling and walking; fuel efficient and alternative energy vehicles; enhanced information technology; more efficient movement of goods; and walkable mixed use communities.
- The **2035 Regional Transportation Plan** provides a vision “to ensure that the Portland region remains prosperous and vibrant by improving safety, expanding transportation choices for everyone, enhancing human health and protecting the natural environment.”⁵⁹ The ATP vision, plan, policies and actions were identified to help implement the Goals and Objectives of the 2035 Regional Transportation Plan.
- TriMet’s **Transit Investment Plan** includes a vision “to make the Portland region the most livable in the country” and a mission to “build and operate the total transit system”, including easy access to stations and stops.⁶⁰ SMART’s **Transit Master Plan** provides a vision where “transportation and recreation are critical facets of life” and when “planned in unison, these elements offer complete connectivity and interrelated opportunities”.⁶¹
- **Plans of local jurisdictions** provide visions and aspirations for communities. Local pedestrian and bicycle plans identify priorities that the ATP knits together.

⁵⁷ Oregon Transportation Plan, Volume 1, September 2006.

⁵⁸ Oregon Statewide Transportation Strategy, A 2050 Vision for Greenhouse Gas Emissions Reduction, Volume 1, accepted March 2013.

⁵⁹ 2035 Regional Transportation Plan, Chapter 2.3.

⁶⁰ TriMet, Transit Investment Plan, FY 2012.

⁶¹ SMART Transit Maser Plan, City of Wilsonville, September 2007.

Integrating walking, bicycling and transit makes the combined networks more effective, better serving residents and visitors alike. Bringing your bicycle on board a MAX train is easy and convenient. Bicycle parking at stations and destinations, pedestrian crossings at transit stops, bus stop shelters, way finding and lighting are some of the improvements that local governments and the region’s transit agencies are making to make a fully supported active transportation network.

“TriMet strongly supports the regional Active Transportation Plan, which will help make walking, biking and transit safer and more attractive. We are especially interested in how the active transportation network complements the regional transit network to improve access and mobility, while using innovative design to ensure safe and efficient operations and interactions between all modes.”

~Neil McFarlane, TriMet General Manager

CHAPTER 5: VISION FOR 2035

Expanding and completing the regional bicycle and pedestrian networks and fully integrating them with transit will take time. Projects are completed in increments, sections of sidewalk or bicycle lanes are added as development occurs or roads are modernized, routes are expanded as new funding is identified. Because developing a fully integrated and complete network will take time, a vision for the future is essential. Like most visions, the ATP vision for the region in 2035 describes **something perhaps not fully attainable by that year, and yet something we should strive for**; a vision to guide the collaborative and collective work across the region so that the pieces join together in a meaningful whole.

In 2035, convenient and safe access to active transportation has helped create and maintain vibrant communities in the region. Connected and safe pedestrian, bicycle and transit networks provide transportation choices throughout the region. People of all ages, abilities, income levels and backgrounds can walk and bike easily and safely for many of their daily needs and the walking and bicycling environment is welcoming to them. A majority of the short trips in the region are made by bicycling and walking. Children enjoy independence walking and biking to school and elders are aging in place and can get around easily without a car. Active transportation contributes significantly to the region's economic prosperity. Household transportation costs are lowered, roadways are less congested and freight experiences less delay. People enjoy clean air and water, and because they incorporate physical activity into their daily routines they are healthier and happier.

CHAPTER 6: GUIDING PRINCIPLES & EVALUATION CRITERIA

The following ten guiding principles were developed by the ATP Stakeholder Advisory Committee to guide development of the regional active transportation network. Development of a connected, safe and comfortable network is a key element of achieving the 2035 vision for active transportation and Regional Transportation Plan transportation goals and targets. Future evaluations and performance measures can refer to the guiding principles to evaluate how well we are implementing the vision.

1. Cycling, walking, and transit routes are integrated and connections to regional centers and regional destinations are seamless.
2. Routes are direct, form a complete network, are intuitive and easy-to-use and are accessible at all times.
3. Routes are safe and comfortable for people of all ages and abilities and welcoming to people of all income levels and backgrounds.
4. Routes are attractive and travel is enjoyable.
5. Routes are integrated with nature and designed in a habitat and environmentally sensitive manner.
6. Facility designs are context sensitive and seek to balance all transportation modes.
7. Increases corridor capacity and relieves strain on other transportation systems.
8. Increases access to regional destinations for low income, minority, disabled, non-English speaking, youth and elderly populations.
9. Measurable data and analysis inform the development of the network and active transportation policies.
10. Implements regional and local land use and transportation goals and plans to achieve regional active transportation modal targets.

Criteria for evaluating and identifying recommended networks

The Stakeholder Advisory Committee developed a set of criteria that were used to evaluate the impact of improvements to the pedestrian and bicycle networks and to provide information to identify the recommended networks.

- **Access.** How well does the network improve access to destinations?
- **Safety.** How well does the network make it safer to walk and ride a bike for all users, regardless of age and ability?
- **Equity.** How well does the network increase access for low-income, minority and other underserved populations?
- **Increased activity.** How well does the network increase the number of trips made by walking and bicycling.

CHAPTER 7: EVALUATION SUMMARY

The ATP evaluated improvements to the regional pedestrian and bicycle networks to provide information on where and how improvements to the networks would impact access to destinations, safety, transportation equity and increased walking and bicycling activity. A description and results from the evaluation are summarized below. Detailed results from the evaluations are provided in the 2013 Regional Pedestrian Network Analysis and 2013 Regional Bicycle Network Evaluation.⁶²

The evaluation was used to develop the recommended pedestrian and bicycle networks described in Chapters 8, 9 and 10. Input from agencies, jurisdictions and stakeholder was also used to develop the recommended networks.

Potential improvements to the pedestrian and bicycle networks were evaluated using Metro's transportation model and Geographic Information Systems (GIS) analysis. Improvements included completing sidewalks on the regional pedestrian network, completing regional trails, adding separated bicycle facilities on roadways with high traffic volumes and speeds, bridges and improved crossings. Data used in the analysis included population and employment densities in 2010 and 2035, U.S. Census tracts with high percentages of underserved populations, regional bicycle and pedestrian networks and locations of essential and regional destinations.⁶³

Regional Bicycle Network Evaluation

Various improvements to the regional bicycle network were analyzed using Metro's bicycle modeling tools and GIS. All bicycle and trail projects currently programmed in the 2035 Regional Transportation Plan were included as improvements. In addition to these projects, the impact of additional projects and improvements not currently programmed in the 2035 Regional Transportation Plan in the were analyzed, including regional trails, separated and complete bicycle routes on major roadways that serve as key bicycle connections, bicycle boulevards and crossings of current barriers. Results of the evaluation, summarized below, provided information to help identify the recommended Regional Bicycle Network (Chapter 9).

- Areas of the region that increased bicycle network density in 2035 saw an increase in bicycle activity. Areas with less density saw less of an increase.
- Bicycle mode share increases the most for commuting trips, indicating the need to connect bicycle routes to jobs.

⁶² The evaluations provide broad brush results at a regional scale. These evaluations do not take the place of more detailed evaluations of projects and the impacts of those projects.

⁶³ Underserved populations include low income, low-English proficiency, non-white, elderly (over 65) and young populations (under 18).

- In general, planned investments in the regional bike network (in the 2035 Regional Transportation Plan) increase bicycle network density in areas with above average underserved populations (in 2010). However, several areas with underserved populations continue to have lower bike network density, compared to other parts of the region:
 - Forest Grove
 - Cornelius
 - Hillsboro South
 - Hillsboro Central
 - Beaverton – East/Raleigh Hills/Washington Square
 - Beaverton- South /Aloha South
 - Tigard
 - Milwaukie – North/ Clackamas Regional Center
 - N. Portland – St. Johns
 - NE Portland – Cully/Rose City Park/Rocky Butte
 - Happy Valley
 - Central Gresham/Wood Village/Fairview
- Protected bicycle facilities increase safety. As the miles of protected bicycle facilities increases, such as trails and cycletracks, the number of bicycle miles traveled on those types of facilities increases, while the number of miles of bicycle facilities on standard five foot bicycle lanes or routes with no separated facilities decreases. This indicates an increase in bicycling safety since more miles traveled by bicycle are on facilities more fully separated from traffic. An increase in safety can be translated into a reduction crash related costs.
- While investment in trails and cycle tracks see a high return on the number of bicycle miles traveled on those facilities, it is important to note that even under the most ambitious scenarios, standard bicycle lanes still account for 55% of bicycle network facilities.
- Bicycle Parkways have about 2.5 times more bicycle traffic than the average bicycle facility, indicating that the importance of the routes and the importance of separated facility designs.
- Routes on the perimeter of the urban growth boundary have lower volumes of bicycle travel due to population levels. However, these routes provide key connections that get people to the higher demand routes.
- Trails and cycle tracks are highly desirable facility types. Trails and cycle tracks that are in denser population and employment areas and connect to destinations tend to attract more bicycle trips. Diagonal routes also showed a high level of demand for bicycle trips.
- Land use is a key factor in the demand and use of bicycle routes. Bike routes in areas with a lot of destinations show higher volumes of trips, even when no bicycle

facilities exist or they are unimproved. This indicates the need to provide bicycle facilities in areas that are destination rich.

- Areas in the region that show the highest level of bicycle activity (other areas show substantial activity, and all areas of the region show bicycling activity):
 - Downtown Portland
 - Inner SE Portland
 - Outer East Portland/West Gresham
 - Central Gresham/Wood Village/Fairview
 - SW Portland
 - Beaverton - South/Aloha-South
 - Beaverton North
 - Tigard
 - SE Portland – Eastmoreland/Woodstock/Foster
 - Inner NE Portland

- Facilities added that overcome barriers saw a relatively large number of bicycle trips. All bridges, existing and added, showed demand for bicycle trips.

Regional Pedestrian Network Evaluation

Various improvements to the Regional Pedestrian Network were analyzed using GIS tools. The analysis estimated the impact of potential improvements to the regional pedestrian network on walking. The analysis compared the potential for walking based on existing pedestrian infrastructure (e.g. sidewalks, trails, signalized crossings) with a future scenario in which gaps and deficiencies in the pedestrian network have been addressed through pedestrian facility projects.

The analysis helped identify where gaps and deficiencies in the network separate people from essential destinations, which can help determine which projects will provide the most benefit in increasing access, safety and equity. Results of the evaluation, summarized below, provided information to help identify the recommended Regional Pedestrian Network (Chapter 10).

- Areas where there are concentrations of people within close proximity to destinations but that lack walking facilities to connect them were identified in the analysis.⁶⁴ Areas where the improvements provided access to the most people were identified:
 - Top pedestrian districts include Tigard, Washington Square, and Millikan Way. Millikan Way, Beaverton Creek and Gateway are in the top 10 for increased access and also have a high percentage of underserved populations.

⁶⁴ The top 10 corridors, districts and trails that provide the greatest increase in the number of people with walking access to destinations are provided in Table 2 in the Regional Pedestrian Analysis report, June 2013.

- Top pedestrian corridors include Beaverton to Tualatin, Hillsboro to Cedar Mill, and SW Oleson Rd./SW Greenburg Rd. Beaverton to Tualatin, Hillsboro to Cedar Mill, and Powell Boulevard are in the top 10 for increased access and also have a high percentage of underserved populations.
- Top regional trails include Fanno Creek Trail, I-205 Corridor, and Beaverton Creek Trail. I-205 Corridor, Beaverton Creek Trail, Columbia Slough Trail and Highway 217 Trail are in the top 10 for increased access and also have a high percentage of underserved populations.⁶⁵
- The analysis identified the percentage of census block groups within each pedestrian area (district, corridor, and trail) that contain an above average share of underserved populations. This allows for the analysis to identify, for example, where areas with high potential to improve access would also serve significant populations of underserved groups.^{66, 67}
 - Pedestrian districts with the highest percentage of underserved populations include Beaverton Creek, 148th Ave. and Rockwood. Nearly all of the “top scoring” districts also score highly in the access and cost per person with increased access metrics. The exception is Hillsboro, which scores low in the access metric because a large percentage of the population is already within walking access to destinations.
 - Pedestrian corridors with the highest percentage of underserved populations include Forest Grove to Cornelius (Tualatin Valley Highway), SE 155th/Milmain, and Aloha to Beaverton. Many also score highly in the access and cost per person with increased access metrics.
 - Regional trails with the highest percentage of underserved populations include the Highway 47 Trail, Council Creek Trail, and MAX Path. Many,

⁶⁵ Hwy 217 Trail is not included on the ATP networks as it has not yet been identified on Beaverton’s Transportation System Plan. It is included on the Regional Trails and Greenways map.

⁶⁶ The top 10 corridors, districts and trails with the highest percentage of underserved populations are provided in Table 4. Since it is not possible to forecast the distribution of future populations by sub-group, the analysis assumes a distribution of population sub-groups for 2035 (the year used for this analysis) similar to 2010.

⁶⁷ It is important to note that concentrations of underserved populations may still be present in areas with low equity scores. This is especially the case for Pedestrian Corridors, whose length may pass through areas with above average numbers of underserved populations, but due to the length of the corridor the Equity score gets ‘washed out.’ Examples of these corridors are: Murray Scholls to Cedar Mill (#10); Halsey (#40); Fremont (#49), Sandy (#52), Cully (#53), Powell (#57), Troutdale to Gresham (#60). The potential for investments in different areas to improve access for people with physical disabilities is illustrated in Appendix E of the Pedestrian Analysis Report, which identifies the frequency of lift deployments at TriMet bus stops.

though not all, of the trails also score highly in the access and cost per person with increased access metrics.

- Sub-areas with the greatest projected increase in *total walking trips* between 2010 and 2035 are: Urban Clark County (78,207), Portland Central City (76,109), North Washington Suburbs (34,765), Clackamas Eastside Suburbs (28,830) and Portland SE to I-205 (20,767).⁶⁸
- Sub-areas with the greatest projected increase in *percentage* of walking trips between 2010 and 2035 are: Portland East of I-205 (20.4% increase), Portland North (11.8%), Clackamas Eastside Suburbs (11.7%), North Washington Suburbs (9.2%), and South Multnomah Suburbs (8.9%).

*Connecting people to the places they want to get to is a key strategy in making walking and bicycling attractive.

⁶⁸ Walking mode share estimates were provided by Metro's transportation modeling tools

CHAPTER 8: AN INTEGRATED ACTIVE TRANSPORTATION NETWORK

An integrated transportation network responds to needs of people, understanding that different travel modes satisfy different needs. People want all of their transportation choices to function well and to be integrated so that moving between modes is easy and seamless. Many people in the region incorporate walking, transit, riding a bicycle and driving into daily travel.

For active travel, transitioning between modes is easy when wayfinding is coordinated; transit stops have shelters and places to sit; maps and mobile apps are available for all modes; safe and secure bicycle parking is provided at transit and destinations; bicycles are accommodated on-board transit; ample room is provided for bicyclists and pedestrians on shared facilities.

The ATP networks were developed to:

- Provide access to the transit network;
- Provide access to regional destinations, including jobs, regional and town centers, schools, parks and essential daily services;
- Improve safety for walking and bicycling;
- Increases walking and bicycling access for underserved populations;⁶⁹
- Increase levels of walking and bicycling to achieve regional and local transportation plans, goals and targets.

Connections to regional destinations

An integrated active transportation network provides access to regional destinations by bike, foot and transit. The ATP Regional Destinations

Linking Transit, Biking and Walking Supports Transit

Establishing pedestrian and bicycle connections to bus and train stations helps extend the reach of the transit network, making trips made by transit feasible for more people. Connections include:

- Filling sidewalk and trail gaps within a mile of stops and stations.
- Filling bicycle network gaps within three miles of stops and stations.
- Including transit information on bike and pedestrian wayfinding.
- Providing shelters and seating at stops and stations.
- Having protected crossings at stations and stops.
- Integrating trail connections into transit stations.
- Including secured, covered bicycle parking or Bike N Rides at stations and stops.
- Allowing bicycles on board transit.
- Exploring the use of apps to let bicycle riders know if a bus or train has bicycle space available.
- Locating transit stops and stations on bicycle and pedestrian maps

⁶⁹ Underserved populations include low income, low-English proficiency, non-white, elderly (over 65) and young populations (under 18).

Map illustrates how the pedestrian and bicycle networks link to transit and other regional destinations. Evaluation of improvements to the regional pedestrian and bicycle networks included evaluating how improvements increased access to these destinations.

New and updated functional classifications for the ATP regional bicycle and pedestrian networks clarify how regional active transportation routes function in the broader transportation network. The classifications are intended to develop thresholds for the functioning of active transportation network, focusing on corridors and districts where people want to access regional destinations by walking and riding bicycles. The next three chapters describe the pedestrian and bicycle network concepts and the network functional classifications. Access to the regional public transportation network is highlighted on the network maps, emphasizing that public transit is a vital part of the active transportation network.

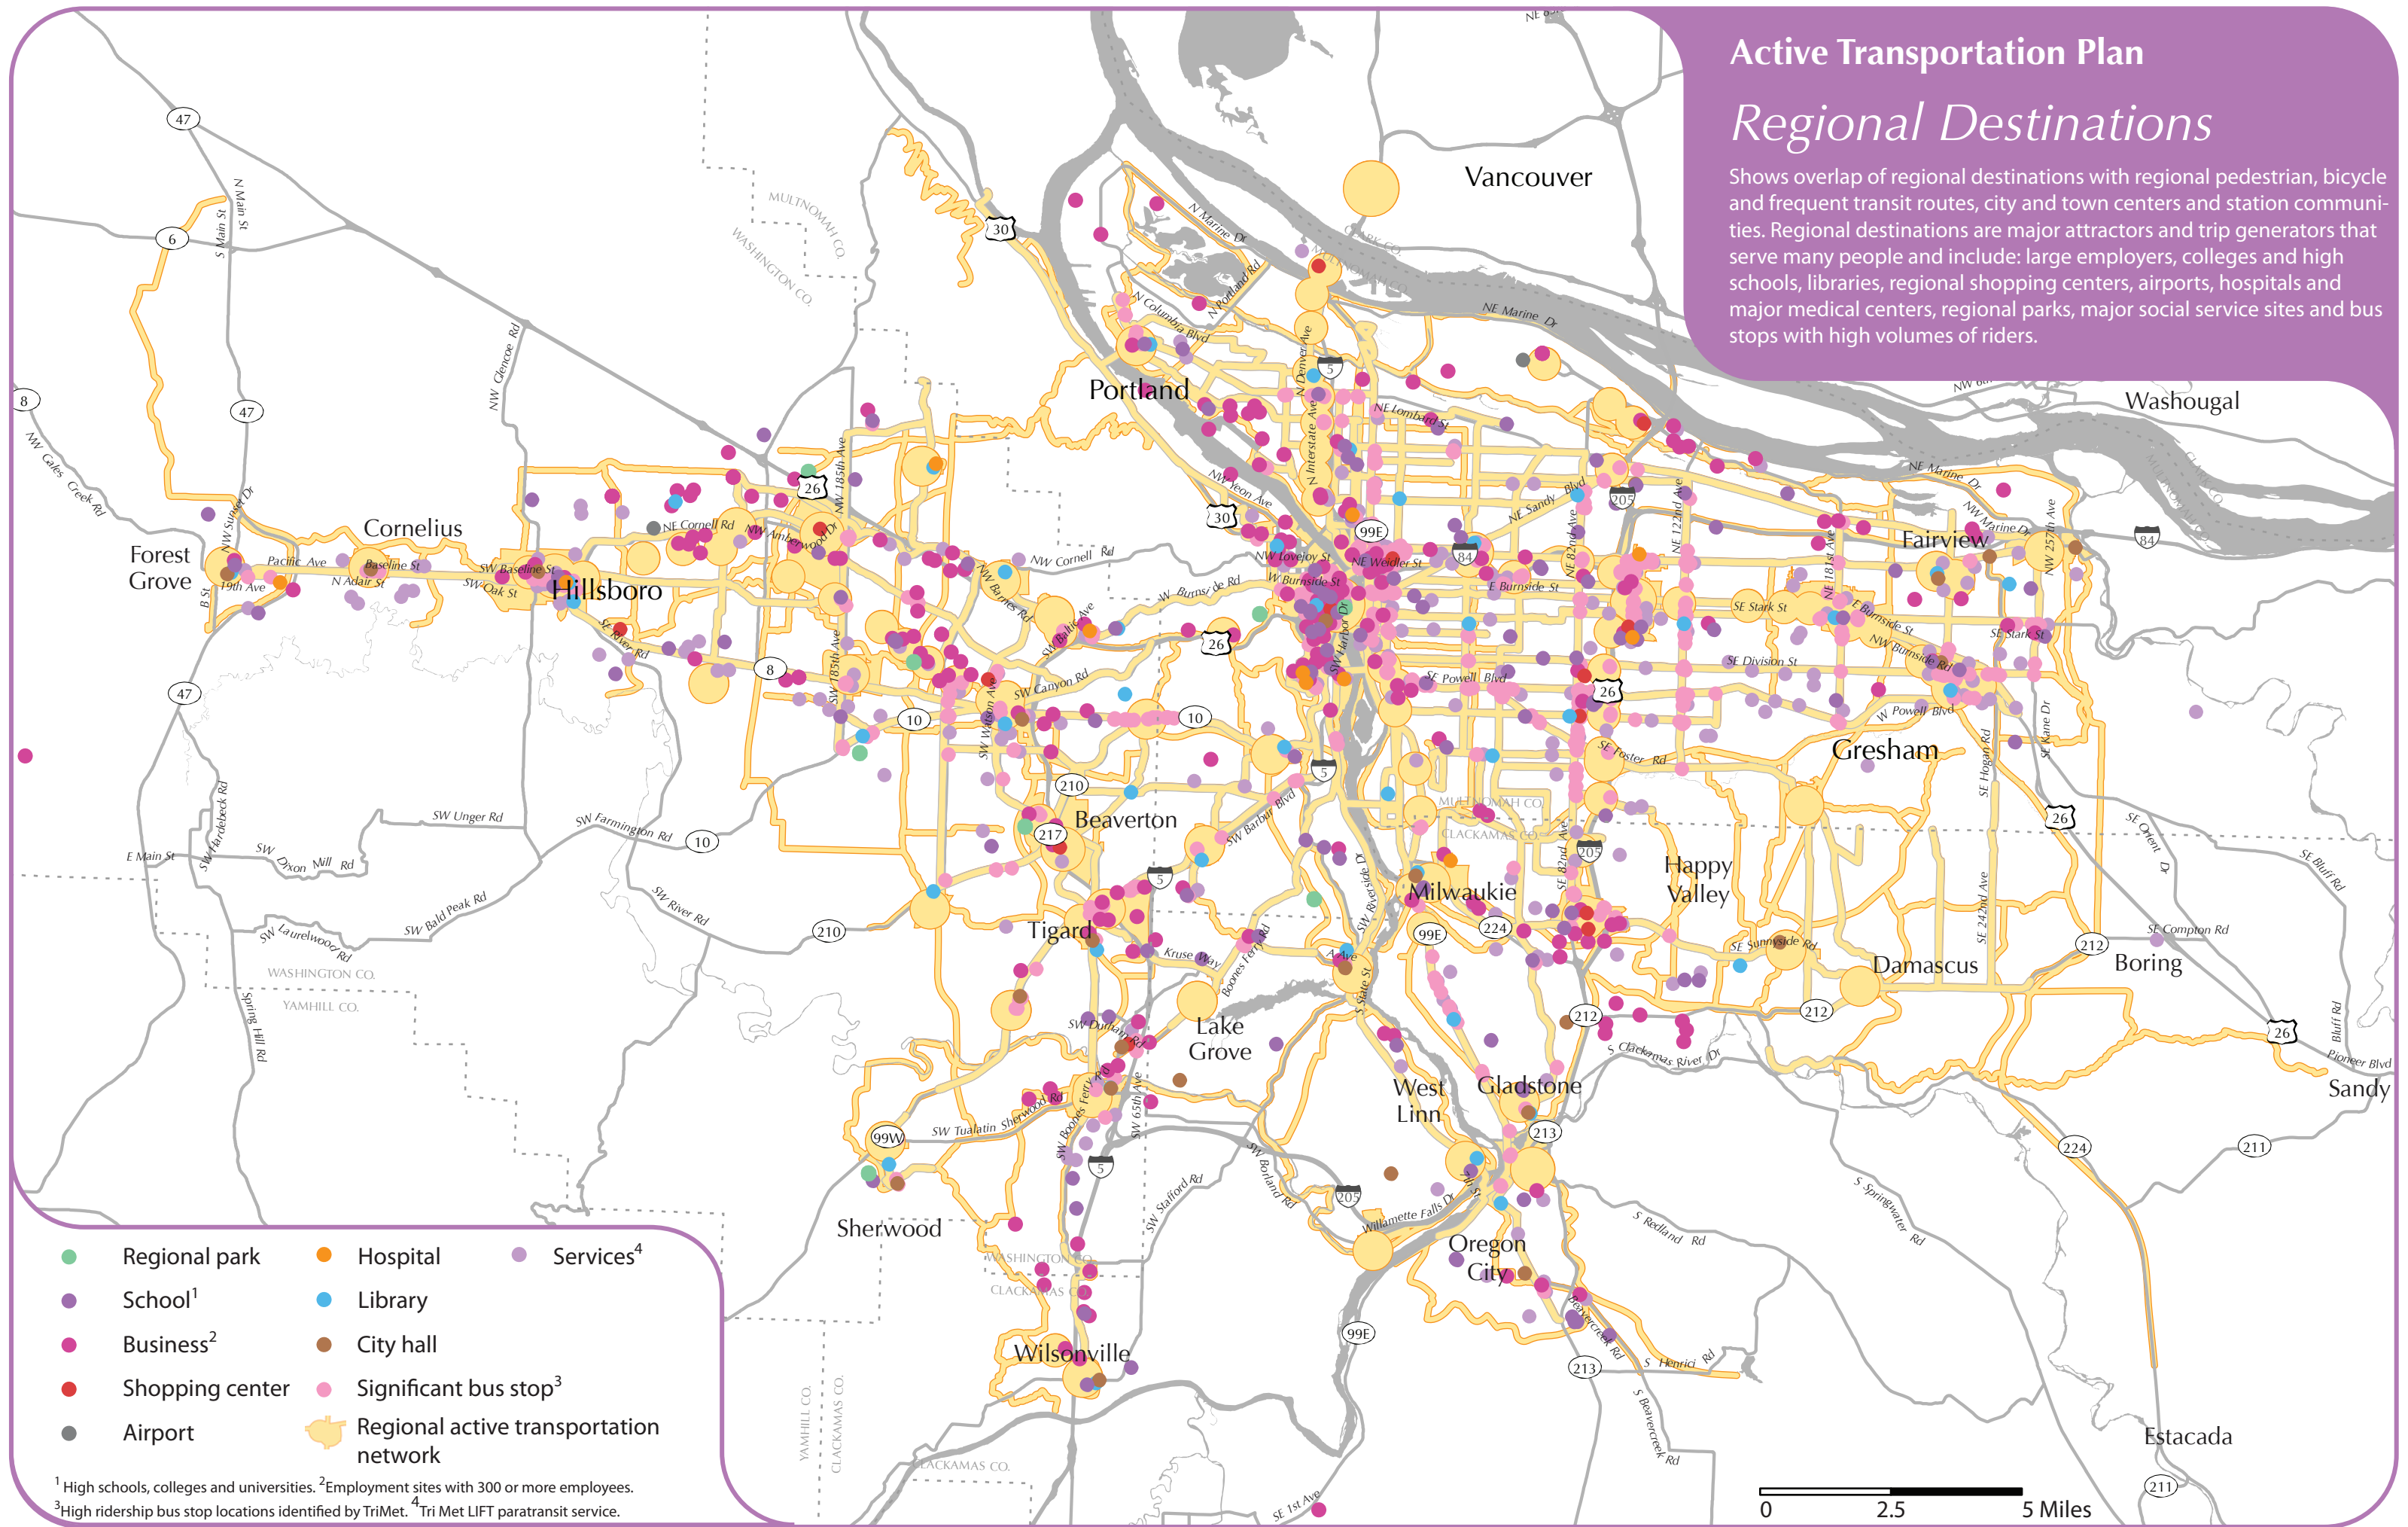

Integrating walking, bicycling and transit puts the region at your feet.

Active Transportation Plan

Regional Destinations

Shows overlap of regional destinations with regional pedestrian, bicycle and frequent transit routes, city and town centers and station communities. Regional destinations are major attractors and trip generators that serve many people and include: large employers, colleges and high schools, libraries, regional shopping centers, airports, hospitals and major medical centers, regional parks, major social service sites and bus stops with high volumes of riders.

- Regional park
- School¹
- Business²
- Shopping center
- Airport
- Hospital
- Library
- City hall
- Significant bus stop³
- Services⁴
- Regional active transportation network

¹ High schools, colleges and universities. ² Employment sites with 300 or more employees. ³ High ridership bus stop locations identified by TriMet. ⁴ Tri Met LIFT paratransit service.

CHAPTER 9: RECOMMENDED REGIONAL BICYCLE NETWORK

The ATP recommended regional bicycle network is an interconnected network off-street trails and on-street separated bikeways linking bicycle districts. The recommended network is shown on the Recommended Regional Bicycle Network Map. The map shows Bicycle Parkways, Regional Bikeways, Bicycle Districts, transit stops and bicycle transit facilities. Bicycle transit facilities are often referred to as Bike & Rides and include protected, secure bicycle parking. Some can include showers and bicycle repair, such as the Bike & Ride in Hillsboro.

The recommended regional bicycle network identifies approximately 1,400 miles of Bicycle Parkways and Regional Bikeways and seventy-four bicycle districts.⁷⁰ The network builds on the currently adopted regional bicycle network and bicycle networks identified in local transportation system plans.⁷¹

Bicycle Parkways

| | |
|---------------------------|-----|
| On-street routes | 267 |
| Off-street (trail) routes | 222 |

Regional Bikeways

| | |
|---------------------------|-----|
| On-street routes | 705 |
| Off-street (trail) routes | 212 |

Total miles **1406**

How were the routes identified? Most of the routes were already identified in the 2035 Regional Transportation Plan. New routes were identified in local plans and corridor plans and from recommendations of the Stakeholder Advisory Committee and other stakeholders. Information from the existing conditions and bicycle network analysis guided the development of the Regional Bicycle Network Concept.⁷² Approximately 225 miles of new routes (a 19% increase) were identified and added to the recommended regional bicycle network. Approximately 70 miles of regional trails were added to the network and approximately 150 miles of roadways were identified as regional bicycle routes. Regional trail additions were identified through the update of the Regional Trails and Greenways inventory and map. Trail alignments were updated and refined and local jurisdictions and stakeholders had the opportunity to add or remove trails to the network and map. Additional roadway routes were identified by local jurisdictions. Routes that showed a high level of demand, but that are not currently on the 2035 Regional Transportation Plan bicycle network map are recommended as new routes, for example Foster Road in the City of Portland.

REGIONAL BICYCLE NETWORK CONCEPT

The Regional Bicycle Network knits together local bicycle routes into a cohesive, connected regional network. Bicycle Parkways and Regional Bikeways connect to and through Bicycle

⁷⁰ Mileage numbers are approximate and will be updated based on potential refinements of the map made during the 2014 update of the Regional Transportation Plan.

⁷¹ Chapter 2, 2035 Regional Transportation Plan, Regional Bicycle Network, page 2-62.

⁷² Regional Bicycle Network Evaluation, 2013 and Existing Conditions, Findings and Opportunities report, 2012.

Districts. Routes and Districts on the Regional Bicycle Network are areas where high levels of bicycling exist or are planned. Many destinations, such as transit, schools, parks, jobs, shops, entertainment and essential services that people want to bicycle to are located in Districts or along or near Parkways and Bikeways; often the Districts, Parkways and Bikeways are destinations themselves. The Regional Bicycle Network is well integrated with the regional transit networks and is safe, direct, and enjoyable to use. Connections to transit are convenient and safe, waiting areas are comfortable and safe.

Three separate bicycle network concepts were developed and evaluated to identify the preferred regional bicycle network concept. A description of the evaluation is provided in the supplemental ATP report “Regional Bicycle Network Evaluation”, April 2013. The recommended concept provides a denser network of bicycle parkways than the three scenarios tested; this is in part due to input from local jurisdictions, agencies and stakeholders, as well as outcomes of the evaluation that demonstrated the benefits of increased density and connectivity of a network of Bicycle Parkways and Regional Bikeways. The recommended network concept includes:

- A bicycle parkway in each of the region’s Mobility Corridors within the urban growth boundary.
- A network of bicycle parkways, spaced approximately every two miles, that connect to and/or through every town and regional center, many regional destinations and to most employment and industrial land areas and regional parks and natural areas (all areas are connected by regional bikeways, the next functional class of bicycle routes).
- A network of regional bikeways that connect to the bicycle parkways, providing an interconnected regional network. Local bikeways connect to bicycle parkways and regional bikeways.
- Regional bicycle districts. Regional and town centers and station communities were identified as bicycle districts, as well as pedestrian districts.

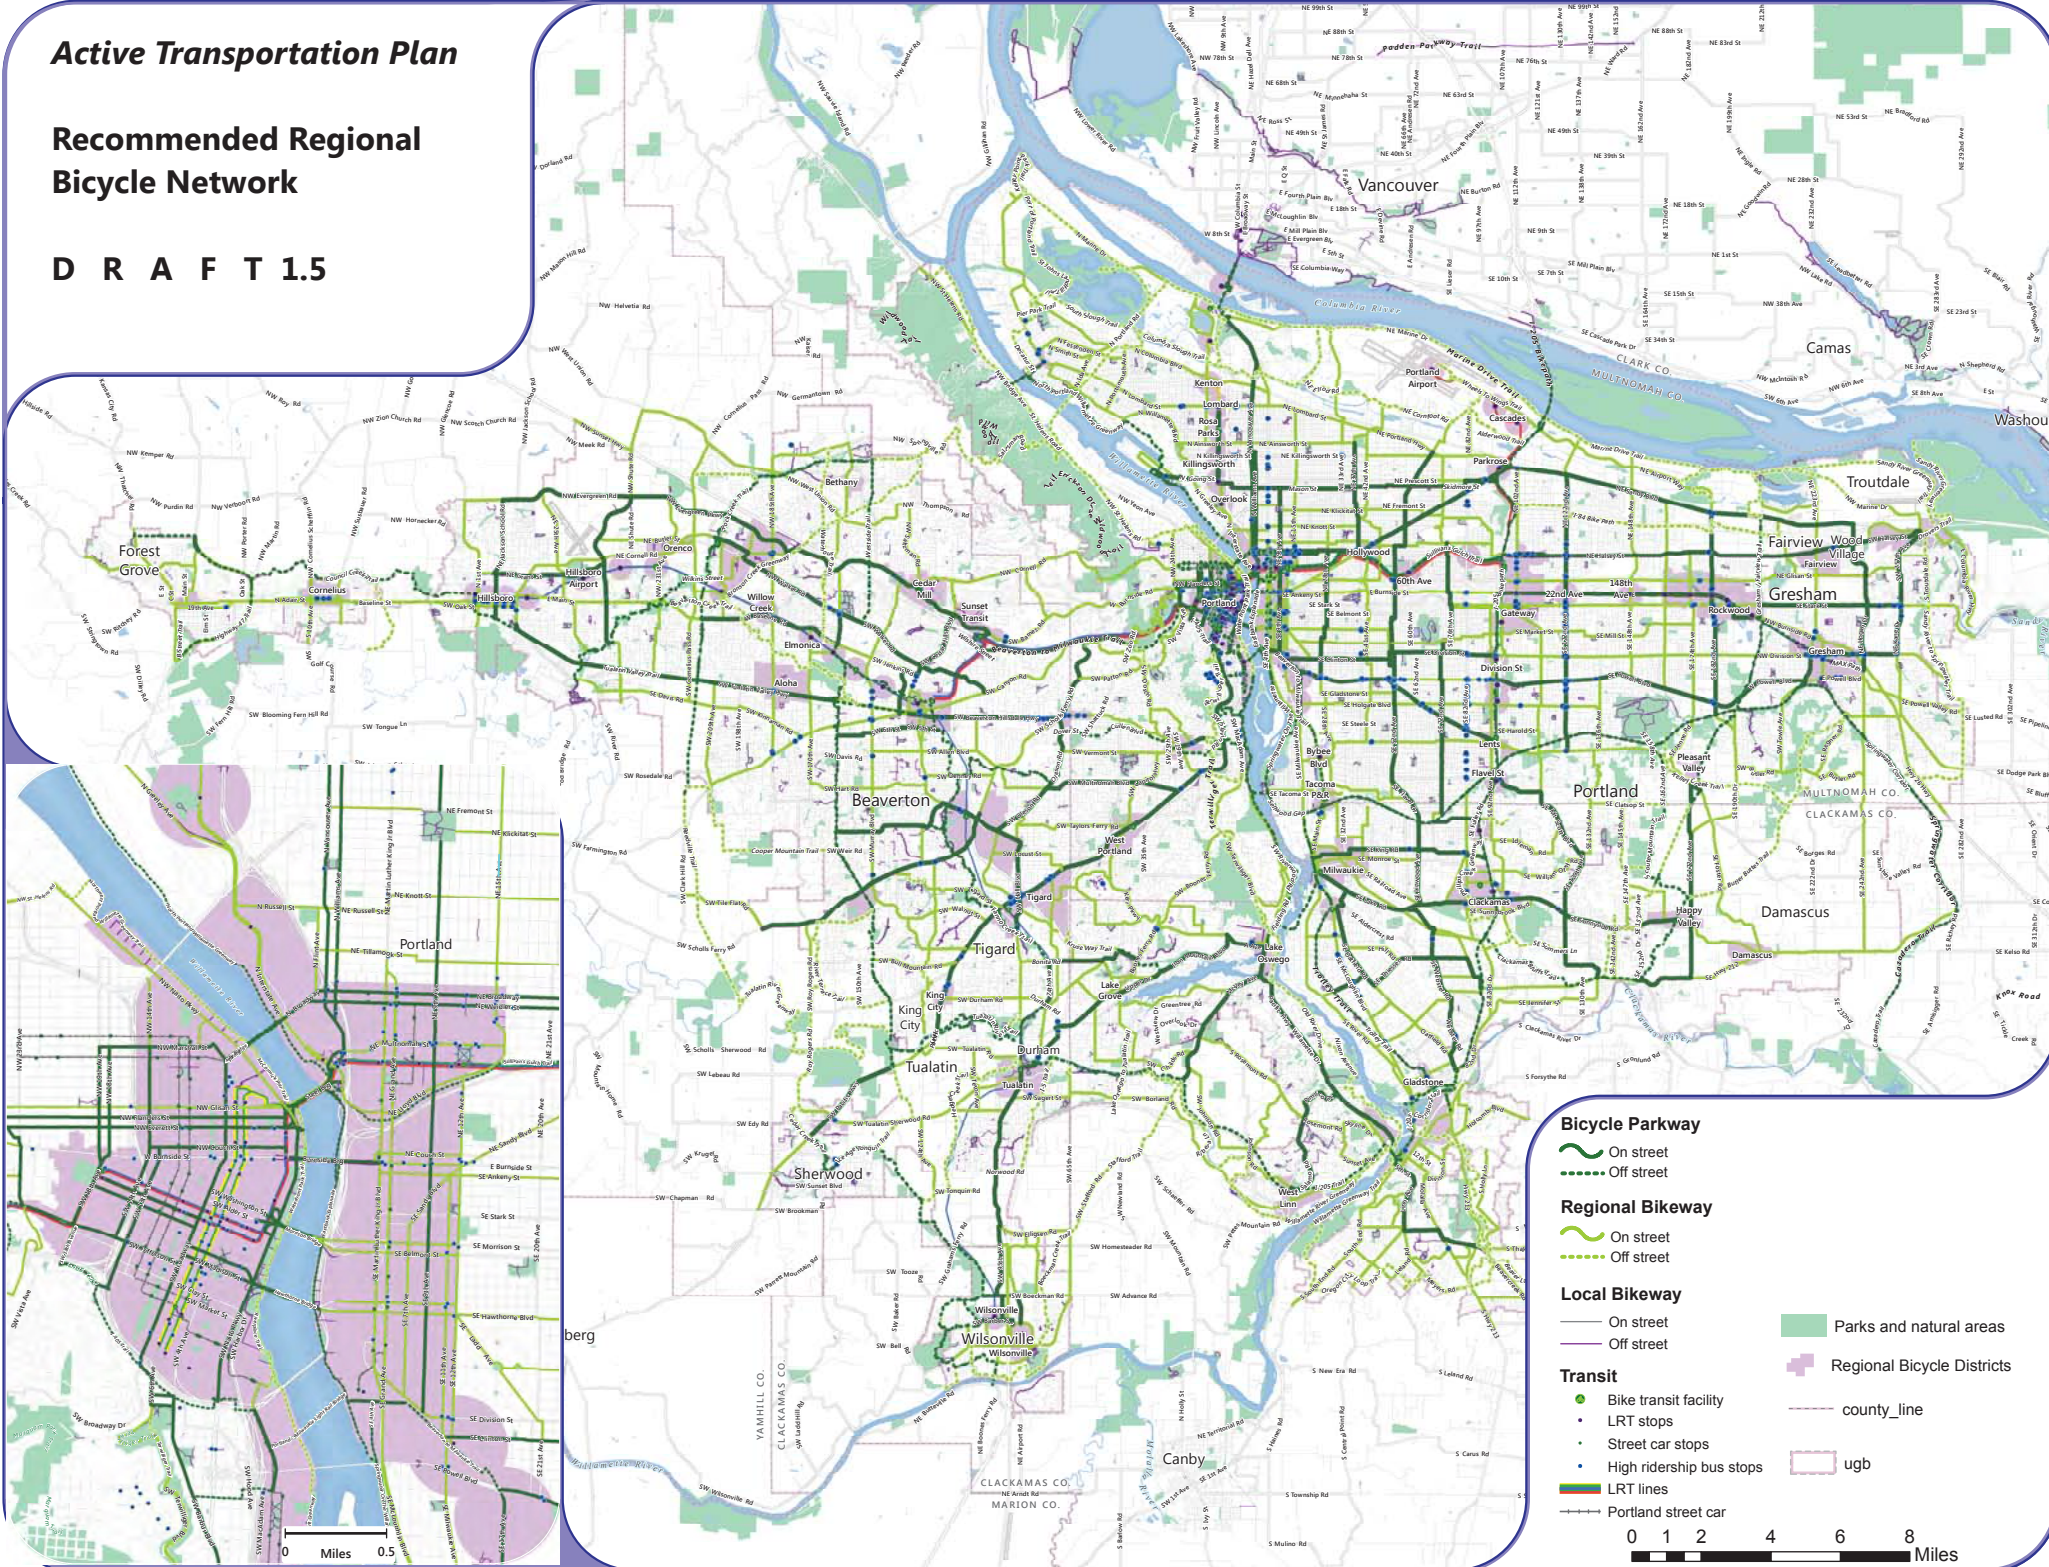

Improving the regional bicycle network improves the livability of neighborhoods and the vibrancy of commercial districts. Photo/rendering: Foster Road United.

Regional Bicycle Network Functional Classifications

Two functional classes are applied to regional bicycle routes and replace the existing functional classes in the 2035 Regional Transportation Plan. Applying functional classifications to identified routes helps achieve coherent, continuous, recognizable and easy to follow routes. Bicycle Parkways are the highest functional classification for regional bicycle routes. They form the spine of the regional bicycle network and are connected to and by Regional Bikeways, the second functional classification for regional bicycle routes. Bicycle Parkways and Regional Bikeways connect to and through Bicycle Districts. The recommended regional bicycle network identifies Bicycle Parkway and Regional Bikeway routes that demonstrated a high level of demand in 2010 and 2035 in the network evaluation, provide connections to jobs, transit and destinations and serve underserved populations (in 2010). Routes on the edge of the urban area showed less activity compared to other areas. Therefore, routes on the edge of the urban areas are Regional Bikeways. Regional bikeways may experience less demand than bicycle parkways, however they provide key routes and connectivity on the regional network; bicycle parkways would not function without them.

The regional bicycle network has a functional hierarchy similar to that of a street network. Location of frequent and almost frequent transit stops and bicycle transit facilities are included on the network.

Bicycle Districts are a new concept for the Regional Transportation Plan and were added to the regional bicycle network through the ATP. As a starting place, the Central City, Regional and Town Centers and Station Communities are identified as Bicycle Districts.⁷³ A Bicycle District is an area with a concentration of transit, commercial, cultural, institutional and/or recreational destinations where bicycle travel is attractive, comfortable and safe. Bicycle Districts are areas where high levels of bicycle use exist or a planned. Within a Bicycle District, some routes may be designated as Bicycle Parkways or Regional Bikeways, however all routes within the Bicycle District are considered regional.

Which areas are designated as Bicycle Districts should be considered further and is identified in the implementing activities of the policy section; Bicycle Districts may need to be added or removed. Since all Station Communities are currently identified as Bicycle Districts, bus stops with high ridership could also be considered as potential Bicycle Districts. Additionally, some Main Streets on the regional network could also be considered for expansion as Bicycle Districts, as well as other areas.

⁷³ These are 2040 Growth Concept Design Types identified in the 2035 Regional Transportation Plan.

*Bicycle Districts can include elements such as bike corrals.
Photo: BikePortland*

Bicycle Parkways are a new functional class for the regional bicycle network and are the highest functional class for bicycle routes. Bicycle Parkways are high quality routes and make up the spine of the bicycle network – the highways of bicycle travel. They provide safe, comfortable and efficient bicycle travel within and between centers. They provide connections to key destinations and routes outside of the region. Based on current research and evaluation of the regional bicycle network Bicycle Parkway routes were identified because they:⁷⁴

- Provide the most direct and efficient route.
- Link population, employment and regional destinations.
- Have the potential to allow for safe and comfortable travel separated from auto traffic.
- Showed high levels of bicycle trips in transportation modeling.
- Overcome barriers to bicycle travel.

Parkways can be any type of facility, such as a bicycle lane, cycle track, bicycle boulevard, or trail, which provides an enhanced bicycle experience that feels safe and comfortable. Design guidelines outlined in Chapter 11 provide examples of the types of designs that can be used to develop Bicycle Parkways. Separated in-street bikeways can be designed in many ways including bicycle lanes, wide bicycle lanes, buffered lanes, passing bicycle lanes, and colored bicycle lanes, using parking as a buffer to a raised path alongside the road. Bicycle boulevards are typically low traffic streets that use traffic calming and wayfinding to prioritize pedestrian and bicycle travel,

⁷⁴ Regional Bicycle Network Evaluation, April 2013.

and can serve as parkways if they are direct, have protected crossings, and route signage. Trails should ensure adequate separation between people riding bicycles and walking and should provide convenient and safe crossings of streets.

Bicycle Parkways are spaced approximately every two miles on the regional bicycle network, and connect to and/or through every urban center, many regional destinations and to most employment and industrial land areas and regional parks and natural areas ;all areas are connected by Regional Bikeways, the next functional class of regional bicycle routes). Refer to the Regional Destinations map. Each Mobility Corridor within the urban area has an identified Bicycle Parkway.⁷⁵

Example of a raised cycle track that is a Bicycle Parkway. Cully neighborhood, Portland. Photo: BTA

Shared use paths identified as regional bicycle parkways are also regional pedestrian parkways. Adequate width and separation between pedestrians and bicyclists are provided on shared use path parkways.

⁷⁵ There are twenty-four transportation, or Mobility Corridors, in the region. The corridors are sub-areas that include all regional transportation facilities within the subarea as well as the land uses served by the regional transportation system. This includes freeways and highways and parallel networks of arterial streets, regional bicycle parkways, high capacity transit, and frequent bus routes.

Example of a shared use path that is a Bicycle Parkway. Ki-a-Kuts Bridge, Tulatain. Photo: The Oregonian

Regional Bikeways can be any type of facility, including off-street trails, separated in-street bikeways (such as buffered bicycle lanes) and bicycle boulevards. On-street Regional Bikeways located on arterial and collector streets are designed to provide separation from traffic. Regional Bikeways connect to Bicycle Parkways and complete the regional level network of bicycle routes.

Example of a Regional Bikeway. Regional Bikeways connect to Bicycle Parkways.

Local Bikeways trails, streets and connections not identified as regional bicycle routes, but they are very important to a fully functioning network. Local bikeways are the local collectors of bicycle travel. They are typically shorter routes with less bicycle demand and use. They provide for door to door bicycle travel.

Can alternate or parallel routes be used if the identified routes turn out to have too many constraints? It is anticipated that as plans and projects develop Bicycle Parkway and Regional Bikeway routes could change, including moving from a regional arterial to a parallel route of low-stress streets. Bicycle Parkways and Regional Bikeways can make use of various types of facility designs, including off street trails, low traffic side streets and major urban arterials. If routes are changed, the new route must provide the same direct, easy access to destinations, prioritize bicycle travel, and provide separation from auto traffic on roadways with higher levels of traffic and speeds.

Changes to the regional bicycle and pedestrian maps are made by submitting a map change request to Metro. Maps in the Regional Transportation Plan are updated during each Regional Transportation Plan update. The recommended bicycle and pedestrian maps in the ATP are recommended for inclusion in the update of the 2014 Regional Transportation Plan; the maps in the ATP are draft until finalized during the 2014 update of the Regional Transportation Plan.

"If we are to meet our regional transportation goals
we must recognize that every bicycle trip is of
regional significance."

~Roger Geller, City of Portland Bicycle Coordinator

CHAPTER 10: RECOMMENDED REGIONAL PEDESTRIAN NETWORK

The ATP recommended regional pedestrian network is an interconnected network of off-street trails and pedestrian corridors that link pedestrian friendly districts. The recommended network is shown on the Recommended Regional Pedestrian Network Map. The map identifies Pedestrian Districts, Pedestrian Parkways, and Pedestrian Corridors and transit stops and stations. Local streets and trails, identified as Pedestrian Connectors are also shown for context and to illustrate the important role they have for a complete walking network.

The recommended regional pedestrian network identifies approximately 1245 miles of regional pedestrian routes and seventy four Pedestrian Districts.

| | |
|--------------------------------------|-------------|
| Pedestrian Parkways | |
| On-street routes | 543 |
| Off-street (trail) routes | 222 |
| Regional Pedestrian Corridors | |
| On-street routes | 242 |
| Off-street (trail) routes | 238 |
| Total miles | 1245 |

How were the routes identified?⁷⁶ Many of the routes were already identified in the 2035 Regional Transportation Plan. New routes were identified in local plans and corridor plans and from recommendations of the Stakeholder Advisory Committee and other stakeholders. Information from the existing conditions and pedestrian network analysis guided the development of the Regional Pedestrian Network Concept. The recommended network identifies 57 miles of new Pedestrian Parkways and 242 new miles of Regional Pedestrian Corridors.⁷⁷ The majority of the new on-street routes are urban arterials that are part of the existing Regional Transportation Plan regional arterial system but not previously identified as part of the regional pedestrian network. Additionally, a few non-arterial streets were added to provide a regional pedestrian connection. Approximately 208 miles of regional trails were added to the network. Regional trail additions were identified through the update of the Regional Trails and Greenways inventory and map. Trail alignments were updated and refined and local jurisdictions and stakeholders had the opportunity to add or remove trails to the network and map.

REGIONAL PEDESTRIAN NETWORK CONCEPT

The Regional Pedestrian Network links local pedestrian networks together into a cohesive regional network. It is comprised of Pedestrian Parkways and Regional Pedestrian Corridors linking into and through Pedestrian Districts. Pedestrian Parkways, Districts and Corridors are

⁷⁶ Regional Pedestrian Network Analysis, June 2013 and Existing Conditions, Opportunities and Findings report, 2012.

⁷⁷ All urban arterials identified in the 2035 Regional Transportation Plan were recognized as being important corridors in the Regional Pedestrian Network because of the destinations and transit they provide and are recommended to be added to the Regional Pedestrian Network. Urban arterials are also locations that need extra attention to be safe and comfortable for pedestrian travel.

areas with current or anticipated high levels of walking activity. Many destinations, such as transit, schools, parks, jobs, shops, entertainment and essential services that people want to walk to are located in Districts or along or near Pedestrian Parkways and Corridors; often the Districts, Parkways and Corridors are often destinations themselves. The Regional Pedestrian Network is well integrated with the regional transit networks and is safe, direct, and enjoyable to use. Connections to transit and transit stops are conveniently located, safe and comfortable.

Most walking trips in the region are approximately half a mile in length. While the Regional Pedestrian Network identifies continuous, long corridors, it is understood that a majority of pedestrian activity will occur in specific pockets along these corridors, for example when a corridor passes through a town center, station area or serves as a main street.

The Regional Pedestrian Network is safe, comfortable, accessible and enjoyable. People walking feel welcomed and prioritized. Key elements of the Regional Pedestrian Network include complete sidewalks, multi-use paths and trails, safe street crossings at regular intervals, illumination and streetscape details. As part of the 2014 Regional Transportation Plan update, a new Pedestrian Parkway concept graphic will be developed.⁷⁸

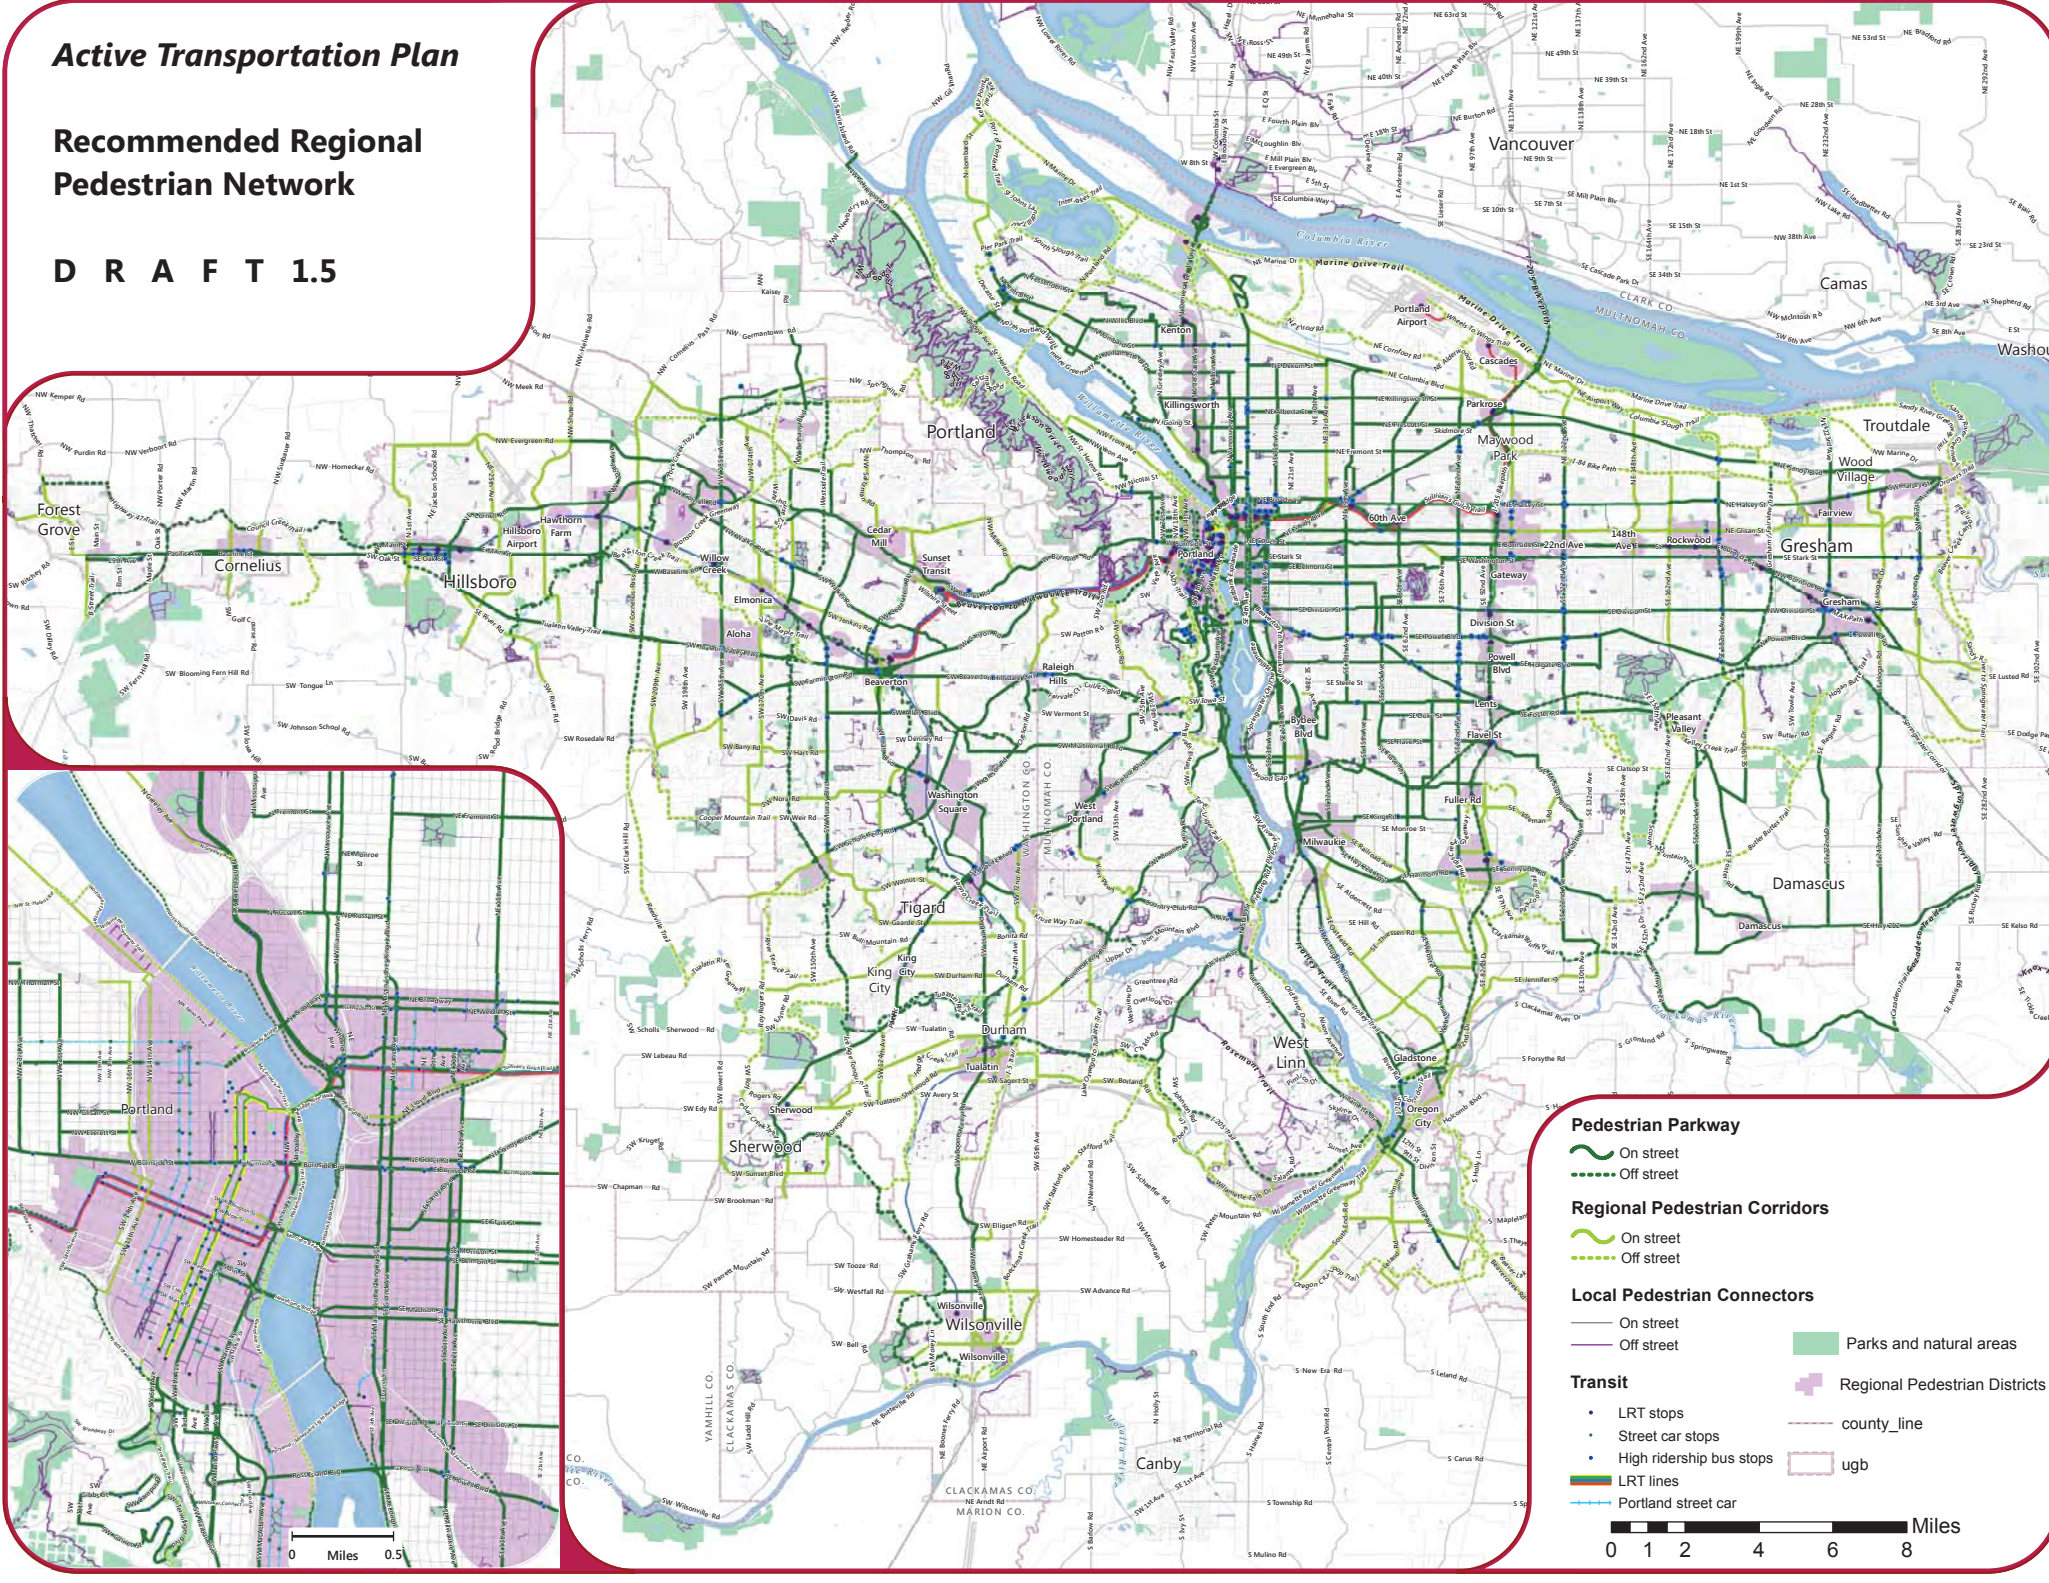

Regional pedestrian routes and districts are places where walking is prioritized, comfortable, safe and convenient. Providing buffers from traffic, convenient and safe crossings of busy roads, lighting and access to destinations are key to making the regional pedestrian network great.

Regional Pedestrian Network Functional Classifications

Two functional classes are applied to regional pedestrian routes; this is the first time the regional pedestrian network has had functional classifications associated with routes. Pedestrian Parkways are the highest functional classification for regional pedestrian routes. They mirror the regional transit network and are also key regional destinations themselves. Regional Pedestrian Corridors are the second functional classification for regional pedestrian routes. Pedestrian Parkways and Regional Pedestrian Corridors connect to and through Pedestrian Districts.

Pedestrian Districts identified in the ATP are those currently identified on the 2035 Regional Transportation Plan pedestrian network map. The Central City, Regional and Town Centers and Station Communities are identified as Pedestrian Districts.⁷⁹ A Pedestrian District is an area with a concentration of transit, commercial, cultural, institutional and/or recreational destinations where pedestrian travel is attractive, comfortable and safe. Pedestrian Districts are areas where high levels of walking exist or are planned. Within a Pedestrian District, some routes may be designated as Pedestrian Parkways or Regional Pedestrian Corridors, however all routes within the Pedestrian District are considered regional.

Pedestrian-friendly downtowns support transportation choices for residents to work, shop and play within one area. Beaverton Broadway Streetscape Improvement Project.

Which areas are designated as Pedestrian Districts may be reevaluated as part of an update of the 2040 Growth Concept Map or separately. New Pedestrian Districts may need to be added. Since all station communities are currently identified as Pedestrian Districts, bus stops with high ridership should be considered as potential pedestrian districts. Additionally, some Main Streets on the regional network should also be considered for expansion as Pedestrian Districts, as well

⁷⁹ These are 2040 Growth Concept Design Types identified in the 2035 Regional Transportation Plan.

as other areas. For example, Villebois in the City of Wilsonville, or Mississippi Avenue in North Portland could be considered as a regional Pedestrian District.

Pedestrian Parkways are great places to walk and are places that have high or planned high levels of people walking to access transit, nature, shops and services.

Pedestrian Parkways are a new functional class for pedestrian routes and the highest functional class. They are high quality and high priority routes for pedestrian activity. Pedestrian Parkways are major urban streets that provide frequent and almost frequent transit service (existing and planned) or regional trails.⁸⁰ Adequate width and separation between pedestrians and bicyclists should be provided on shared use path parkways.

⁸⁰ All regional trails that are Pedestrian Parkways are also Bicycle Parkways.

Regional Pedestrian Corridors are all urban arterials and trails that are not Parkways.

Regional Pedestrian Corridors is the second highest functional class of the regional pedestrian network. On-street Regional Pedestrian Corridors are any major or minor arterial on the regional urban arterial network that is not a Pedestrian Parkway. Regional trails that are not Pedestrian Parkways are Regional Pedestrian Corridors. These routes are also expected to see a high level of pedestrian activity, though not as high as the Parkways.

A pedestrian bridge crosses Trillium Creek near Robert Gray Middle School. Photo: The Oregonian

Local Pedestrian Connectors are all streets and trails not included on the regional network. Local connectors experience lower volumes of pedestrian activity and are typically on residential and low-volume/speed roadways or smaller trails. Connectors, however, are an important element of the regional pedestrian network because they allow for door-to-door pedestrian travel.

CHAPTER 11: DESIGN GUIDELINES

Design of facilities is especially important for people walking and riding bikes on arterial roadways, crossing busy streets or other barriers and on trails with high volumes of users. Design has been shown to improve safety for all roadway users and make the entire transportation system work better. Context, such as anticipated level of activity, land use, nearby destinations, frequency of transit service, vehicle volumes and speeds and level of freight activity, should be considered as routes are designed and planned to achieve the appropriate level of design.

The ATP provides a set of suggested design guidelines for completing, extending and upgrading the region's bicycle and pedestrian networks. The recommended designs are currently being applied in the U.S. and in the region. When applied to pedestrian and bicycle facilities the designs have been shown to help to make walking and bicycling easy, safe, comfortable and attractive. The purpose of the design guidelines is to provide a check-list of the highest possible standards being used today, with the understanding that not all projects will be able to or need to use the designs.

- The guidelines were drawn from the following sources: Metro Creating Livable Streets: Street Design Guidelines for 2040 (for pedestrian elements)
- National Association of City Transportation Officials (NACTO) Urban Bikeway Design Guide
- Washington County Bicycle Design facility Toolkit
- Oregon Department of Transportation Bicycle and Pedestrian Design Guide
- Institute of Transportation Engineers Designing Walkable Urban Thoroughfares: A Context Sensitive Approach
- AASHTO Guide for the Development of Bicycle Facilities, 4th Edition

The U.S. Department of Transportation recommends going beyond minimum design standards for walking and bicycling facilities. Transportation agencies are encouraged, when possible, to avoid designing walking and bicycling facilities to the minimum standards. For example, shared-use paths that have been designed to minimum width requirements will need retrofits as more people use them. It is more effective to plan for increased usage than to retrofit an older facility. Planning projects for the long-term should anticipate likely future demand for bicycling and walking facilities and not preclude the provision of future improvements.

~United States Department of Transportation Policy Statement on Bicycle and Pedestrian Accommodation Regulations and Recommendations, 2010

In addition to the design guidelines identified in the above sources, the ATP Stakeholder Advisory Committee recommended fourteen feet as the preferred minimum width for Regional Pedestrian and Bicycle Parkway trails. This design width may not be possible in some cases due to available right of way, environmental constraints or other reasons. In instances where it is not

possible to construct or upgrade trail, other approaches that minimize conflicts between people walking and riding bicycles and other uses can be explored.

On existing roadways, separated in-roadway facilities may be implemented by narrowing existing travel lanes, removing travel lanes, removing on-street parking or widening the roadway shoulder. If constraints, such as narrow existing right-of-way, prohibit providing optimally desired bicycle facility widths, then interim facility improvements can be used.

Interim pedestrian and bicycle facility improvements

As regional pedestrian and bicycle corridors and districts are developed it may not be feasible, for a variety of reasons, to construct the ultimate preferred pedestrian or bikeway facility. Sufficient funding may not be immediately available, or a desired improvement may be constrained by external factors. In such instances, an interim facility is preferred to no facility, provided it meets the minimum standards of local jurisdictions identified in local plans. However, this should be a “last resort” and not a default approach.

Providing separation for people walking and riding bicycles can make the road safer and easier to navigate for all users. Moving parked cars over provides a cycle track near Portland State University.

Regional Bicycle Network Functional Classifications and Preferred Design Guidelines

| | | |
|--|--|--|
| <p>Functional Class 1 (FC-1): Bicycle Parkway and Bicycle District Identified design guidelines are derived from best practices that have been shown to encourage bicycling by making it safer and more comfortable and minimizing conflicts with other transportation modes. Context, such as anticipated level of activity, land use, nearby destinations, frequency of transit service, vehicle volumes and speeds and level of freight activity, should be considered as routes are designed and planned to achieve the appropriate level of design. Refer to Chapter 9 on the Regional Bicycle Network for more information on the functional classifications and Chapter 11 Design Options for additional context.</p> | <p>Functional Class 2 (FC-2): Regional Bikeway Identified design options are derived from best practices that have been shown to encourage bicycling by making it safer and more comfortable and minimizing conflicts with other transportation modes. Context, such as anticipated level of activity, land use, nearby destinations, frequency of transit service, vehicle volumes and speeds and level of freight activity, should be considered as routes are designed and planned to achieve the appropriate level of design. Refer to Chapter 9 on the Regional Bicycle Network for more information on the functional classifications and Chapter 11 Design Guidelines for additional context.</p> | <p>Functional Class 3 (FC-3): Local Bikeway Primarily local streets and trails providing the door to door connections for bicycle travel. They are typically shorter routes with less bicycle demand and use.</p> |
| <p>Preferred Design Guidelines for FC-1 Design Type A: Off-street shared use path</p> <ul style="list-style-type: none"> • Preferred minimum width of 14'; additional width and bifurcation where expected demand warrants preferred. If 14' width is not possible design approaches such as pavement markings, signage, pull outs, etc. can be applied to minimize conflicts among high volume of users. • Marked high-visibility crosswalks with lighting at all crossings of collector and arterial roads, additional crossing features where appropriate. • Lighting of path is desirable. • Bike signals and detection at signals are desirable. • Way finding and bike parking are included. • Separation of pedestrians and bicyclists. • Seating and pull outs are provided. | <p>Preferred Design Guidelines for FC-2 Design Type A: Off-street shared use path</p> <ul style="list-style-type: none"> • Preferred width of 12' when feasible, minimum width of 10'. • Marked crosswalks with lighting at all crossings of collector and arterial roads, additional crossing features where appropriate. • Lighting of path may be desirable. • Way finding and bike parking are included. | <p>Includes all streets and trails not identified as a bicycle parkway or community bikeway. While local streets and trails that fall into this functional class are not regional facilities, they are identified because they are important to the functioning of the regional active transportation network.</p> |
| <p>Preferred Design Guidelines for FC-1 Design Type B: Low traffic street, (ADT <6,000 and posted speed is 30 or less)</p> <ul style="list-style-type: none"> • Where ADT <3,000, bicycle boulevard treatments including traffic calming and diversion measures may be appropriate. • Where bike boulevard treatments are not used, 7' bike lanes with markings , or 5' bike lane with 2' buffer, are preferred design; 6' bike lanes should be considered as minimum treatment for bicycle parkways • Crossing treatments at all crossings of collector and arterial roads. • Context-based traffic calming is desirable. • Lighting along bikeway and at intersections. | <p>Preferred Design Guidelines for FC-2 Design Type B: Low traffic street, (ADT <6,000 and posted speed is 30 or less)</p> <ul style="list-style-type: none"> • Where ADT <3,000, bicycle boulevard treatments including traffic calming and diversion measures may be appropriate. • Where bike boulevard treatments are not used, 7' bike lanes with markings , or 5' bike lane with 2' buffer, are preferred design; 5' bike lanes should be considered minimum treatment • Crossing treatments at all crossings of arterial roads. • Context-based traffic calming is desirable. • Lighting along bikeway and at intersections. | <p>Design guidelines are not identified for local bikeways.</p> |
| <p>Preferred Design Guidelines for FC-1- Design Type C: High traffic street, (ADT >6,000 or posted speed is 35 or more), or high volume of heavy trucks</p> <ul style="list-style-type: none"> • A high degree of separation from vehicle traffic is critical. Where feasible use cycle tracks, buffered bike lanes with a preferred minimum width 6' lane, 3' buffer or protected bikeways such as a parallel path. • Attention to treatment of intersections and driveways is critical. • Preferential treatments such as green coloring, bike boxes, bike signals, turn queue boxes, and advance stop lines should be used as appropriate. • Arterial-type traffic calming is desirable, including raised medians, raised intersections, gateway treatments, textured intersections, refuge islands, road diets, and roundabouts. • Lighting along bikeway and at intersections. | <p>Preferred Design Guidelines for FC-2 Design Type C: High traffic street, (ADT >6,000 or posted speed is 35 or more), or high volume of heavy trucks</p> <ul style="list-style-type: none"> • A high degree of separation from traffic is critical. Where feasible use cycle tracks, buffered bike lanes with a preferred minimum width 6' lane, 3' buffer, or 7' bike lanes. 5' bike lanes are minimum treatment. • Attention to treatment of intersections and driveways is desirable. • Preferential treatments such as green coloring, bike boxes, bike signals, turn queue boxes, and advance stop lines may be used as appropriate. • Arterial-type traffic calming is desirable, including raised medians, raised intersections, gateway treatments, textured intersections, refuge islands, road diets, and roundabouts. • Lighting along bikeway and at intersections. | |

Regional Pedestrian Network Functional Classifications and Preferred Design Guidelines

| | | |
|--|--|---|
| <p>Functional Class 1 (FC-1): Pedestrian Parkway and Pedestrian District These design guidelines are derived from best practices that have been shown to encourage walking by making it safer and more comfortable and minimizing conflicts with other transportation modes. Context, such as anticipated level of activity, land use, nearby destinations, frequency of transit service, vehicle volumes and speeds and level of freight activity, should be considered as routes are designed and planned to achieve the appropriate level of design. Refer to Chapter 10 on the Regional Pedestrian Network for more information on the functional classifications and Chapter 11 Design Guidelines for additional context.</p> | <p>Functional Class 2 (FC-2): Regional Pedestrian Corridor These design guidelines are derived from best practices that have been shown to encourage walking by making it safer and more comfortable and minimizing conflicts with other transportation modes. Context, such as anticipated level of activity, land use, nearby destinations, frequency of transit service, vehicle volumes and speeds and level of freight activity, should be considered as routes are designed and planned to achieve the appropriate level of design. Refer to Chapter 10 on the Regional Pedestrian Network for more information on the functional classifications and Chapter 11 Design Guidelines for additional context.</p> | <p>Functional Class 3 (FC-3): Local Pedestrian Connector All streets and trails/paths not included in the principal regional or regional corridor networks. Local connectors experience lower volumes of pedestrian activity and on-street connectors are typically on residential and low-volume/speed roadways. Allow for door-to-door pedestrian travel. While local streets and trails that fall into this functional class are not regional facilities, they are identified because they are important to the functioning of the regional active transportation network.</p> |
| <p>Preferred Design Guidelines for FC-1 Design Type A: Off-street shared use path</p> <ul style="list-style-type: none"> • Preferred minimum width of 14'; additional width and bifurcation where expected demand warrants. If 14' width is not possible design approaches such as pavement markings, signage, pull outs, etc. should be applied to minimize conflicts among high volume of users. • Marked crosswalks at all crossings of collector and arterial roads, additional crossing features where appropriate. • Marked high-visibility crosswalks with lighting at all crossings of collector and arterial roads, additional crossing features where appropriate. • Lighting of path is desirable. • Pedestrian countdown heads at all signals. • Short signal cycle lengths (90s or less), pedestrian-friendly timing, and lead pedestrian intervals at signals are desirable. • Separation of pedestrians and bicyclists. • Seating and pull outs are provided. • Way finding included. | <p>Preferred Design Guidelines for FC-2 Design Type A: Off-street shared use or pedestrian only path</p> <ul style="list-style-type: none"> • Preferred width of 12', minimum width of 10'. • Marked crosswalks with lighting at all crossings of collector and arterial roads, additional crossing features where appropriate. • Lighting of path may be desirable. • Way finding included. | <p>Design guidelines are not identified for local walkways.</p> |
| <p>Preferred Design Guidelines for FC-1 Design Type B : Low traffic street, (ADT <12,000 and posted speed is 35 or less)</p> <ul style="list-style-type: none"> • Preferred combined minimum width for sidewalk and buffer-10' Buffer width can be provided by on-street parking, landscape buffer, furnishing zone, raised cycle track, and/or buffered bike lane. • Pedestrian clear zone of 6' or more. • Street trees between roadway and pedestrian clear zone are desirable. • Marked crosswalks provided ≤530' spacing along corridor using context sensitive placement • Crossing features such as refuge islands, curb extensions, raised crosswalks, raised intersections, and beacons or signals where appropriate. • Lighting at all crosswalks. • Pedestrian-scale lighting along corridor. • Pedestrian countdown heads at all signals. • Short signal cycle lengths (90-s or less), pedestrian-friendly timing, and lead pedestrian intervals at signals are desirable. • Walkable street-fronting retail uses and on-street parking is desirable in centers and along Main Streets. • Medians desirable along corridors with 4+ lanes. • Minimize driveway count and width. • Context-based traffic calming is desirable. | <p>Preferred Design Guidelines for FC-2 Design Type B: Low traffic street, (ADT <12,000 and posted speed is 35 or less)</p> <ul style="list-style-type: none"> • Preferred combined minimum width for sidewalk and buffer - 10'. Buffer width can be provided by on-street parking, landscape buffer, furnishing zone, raised cycle track, and/or buffered bike lane • Pedestrian clear zone of 5' or more. • Street trees between roadway and pedestrian clear zone. • Marked crosswalks provided every ≤530' along corridor using context sensitive placement. • Crossing features such as refuge islands, curb extensions, and beacons or signals where appropriate. • Lighting at all crosswalks. • Pedestrian-scale lighting along corridor. • Pedestrian countdown heads at all signals. • Short signal cycle lengths (90-s or less), pedestrian-friendly timing, and lead pedestrian intervals at signals are desirable. | <p>Design guidelines are not identified for local walkways.</p> |

Regional Pedestrian Network Functional Classifications and Preferred Design Guidelines

Preferred Design Guidelines for FC- 1 Design Type C: High traffic street, (ADT >12,000 or posted speed is 40 or more), or high volume of heavy trucks

- A high degree of separation from vehicle traffic is critical. Preferred combined minimum width for sidewalk and buffer -17'. Buffer width can be provided by on-street parking, landscape buffer, furnishing zone, raised cycle track, and/or buffered bikelane.
- Pedestrian clear zone of 6' or more.
- Street trees between roadway and pedestrian clear zone are desirable
- Marked crosswalks provided $\leq 530'$ spacing along corridor using context sensitive placement provide desired regional pedestrian connectivity.
- Crossing features such as refuge islands, curb extensions, raised crosswalks, raised intersections, and beacons or signals where appropriate.
- Lighting at all crosswalks.
- Pedestrian-scale lighting along corridor.
- Pedestrian countdown heads at all signals.
- Short signal cycle lengths (90-s or less), pedestrian-friendly timing, and lead pedestrian intervals at signals are desirable.
- Walkable street-fronting retail uses and on-street parking is desirable in centers and along Main Streets.
- Medians desirable along corridors with 4+ lanes.
- Minimize driveway count and width.
- Context-based traffic calming is desirable, including raised medians, raised intersections, gateway treatments, textured intersections, refuge islands, road diets, and roundabouts.

Preferred Design Guidelines for FC- 2 Design Type C: High traffic street, (ADT >12,000 or posted speed is 40 or more), or high volume of heavy trucks

- A high degree of separation from vehicle traffic is critical. Preferred combined minimum width for sidewalk and buffer 14'. Buffer width can be provided by on-street parking, landscape buffer, furnishing zone, raised cycle track, and/or buffered bikelane.
- Pedestrian clear zone of 6' or more.
- Street trees between roadway and pedestrian clear zone are desirable.
- Marked crosswalks provided $\leq 530'$ spacing along corridor using context sensitive placement provide desired regional pedestrian connectivity
- Crossing features such as refuge islands, curb extensions, raised crosswalks, raised intersections, and beacons or signals where appropriate.
- Lighting at all crosswalks.
- Pedestrian-scale lighting along corridor.
- Pedestrian countdown heads at all signals.
- Short signal cycle lengths (90-s or less), pedestrian-friendly timing, and lead pedestrian intervals at signals are desirable.
- Walkable street-fronting retail uses and on-street parking is desirable in centers and along Main Streets.
- Medians desirable along corridors with 4+ lanes.
- Minimize driveway count and width.
- Context-based traffic calming is desirable, including raised medians, raised intersections, gateway treatments, textured intersections, refuge islands, road diets, and roundabouts.

Mid-block crossings for trails are important to increase use of trails and improve safety.

Overlapping needs: wildlife habitat and freight

Many active transportation routes are also routes used by freight and transit or could potentially bisect sensitive land areas. The recommended ATP regional pedestrian and bicycle network maps show the network vision, with the understanding that plans and projects need to be developed in a context sensitive manner that integrates all modes while enhancing and preserving the natural environment. Because of this, design will vary from project to project based on the context. The following maps show where bicycle and pedestrian routes overlap with regional freight routes, and with wildlife habitat and riparian areas. More work is needed to identify areas of key concern and to identify examples of success to help provide guidance for the future.

- Environmental impact of new facilities on habitat and wildlife in environmentally sensitive areas should be considered early in the planning stages; identifying places where projects can benefit the environment, by replacing a culvert or providing new vegetation, should also be considered. Involving conservation experts in the planning process early is important. Where there are significant physical constraints, such as steep slopes, landslide hazards, or regionally significant lands or

riparian areas, alternative routes may be appropriate.⁸¹ The maps included in this chapter illustrate the location of high quality land and riparian areas and the regional active transportation networks. Sensitive habitats and resources, such as wetlands, should be avoided. Sensitive design should be used to enhance watershed and ecosystem health and mitigate and reduce impacts.

- Adding missing pedestrian and bicycle facilities to roadways can impact other transportation modes, including transit and freight. These impacts should be minimized and the goal should be to integrate all modes so that all can function well. Location of transit routes and routes with heavy volumes of trucks should be considered in planning new routes, and interaction with buses and trucks should be addressed, especially when designing for bicycles. “Road Diets” are one way to reconfigure limited roadway space in a way that allows for the inclusion of wider sidewalks and separated bicycle facilities such as buffered bicycle lanes, which can provide space for all users to operate safely in their own “zones”. Road diets can have multiple safety and operational benefits for autos, as well as pedestrians and cyclists. The following maps show the overlap of the regional pedestrian, bicycle and freight networks. Identifying where there is overlap in the networks and working on solutions that achieve desired outcomes for transit, freight and active transportation is vital to an integrated, functioning network.

Treatments such as pedestrian crossings improve the viability of pedestrian to cars and trucks. Photo: Federal Highway Administration Pedestrian Safety Plan

⁸¹ The Regional Conservation Strategy for the Greater Portland Vancouver Metropolitan Area, Intertwine and Metro, identifies high quality land and riparian areas in the region. Refer to maps in this chapter.

Environmental Considerations for Trails

Many of the region's trails connect people to key regional destinations with a non-motorized, natural corridor that provides an unrivaled travel experience. Building out the regional trail network provides an opportunity to enhance and increase active transportation. Trails play a special role in the region's transportation strategy. Trails are linear parks, they are roads for active travel and they serve as public squares, places for communities to gather.

In some cases, planned trails may pass through sensitive wildlife habitat. Active transportation and impacts to wildlife must be carefully balanced. Some impacts can be mitigated with design treatments. For example, pervious pavement can be used to reduce water runoff. Wildlife crossing treatments can be considered at key animal routes or at culverts. In other instances avoiding the habitat altogether is necessary.

Resources for planning and developing environmentally sensitive and habitat friendly trails

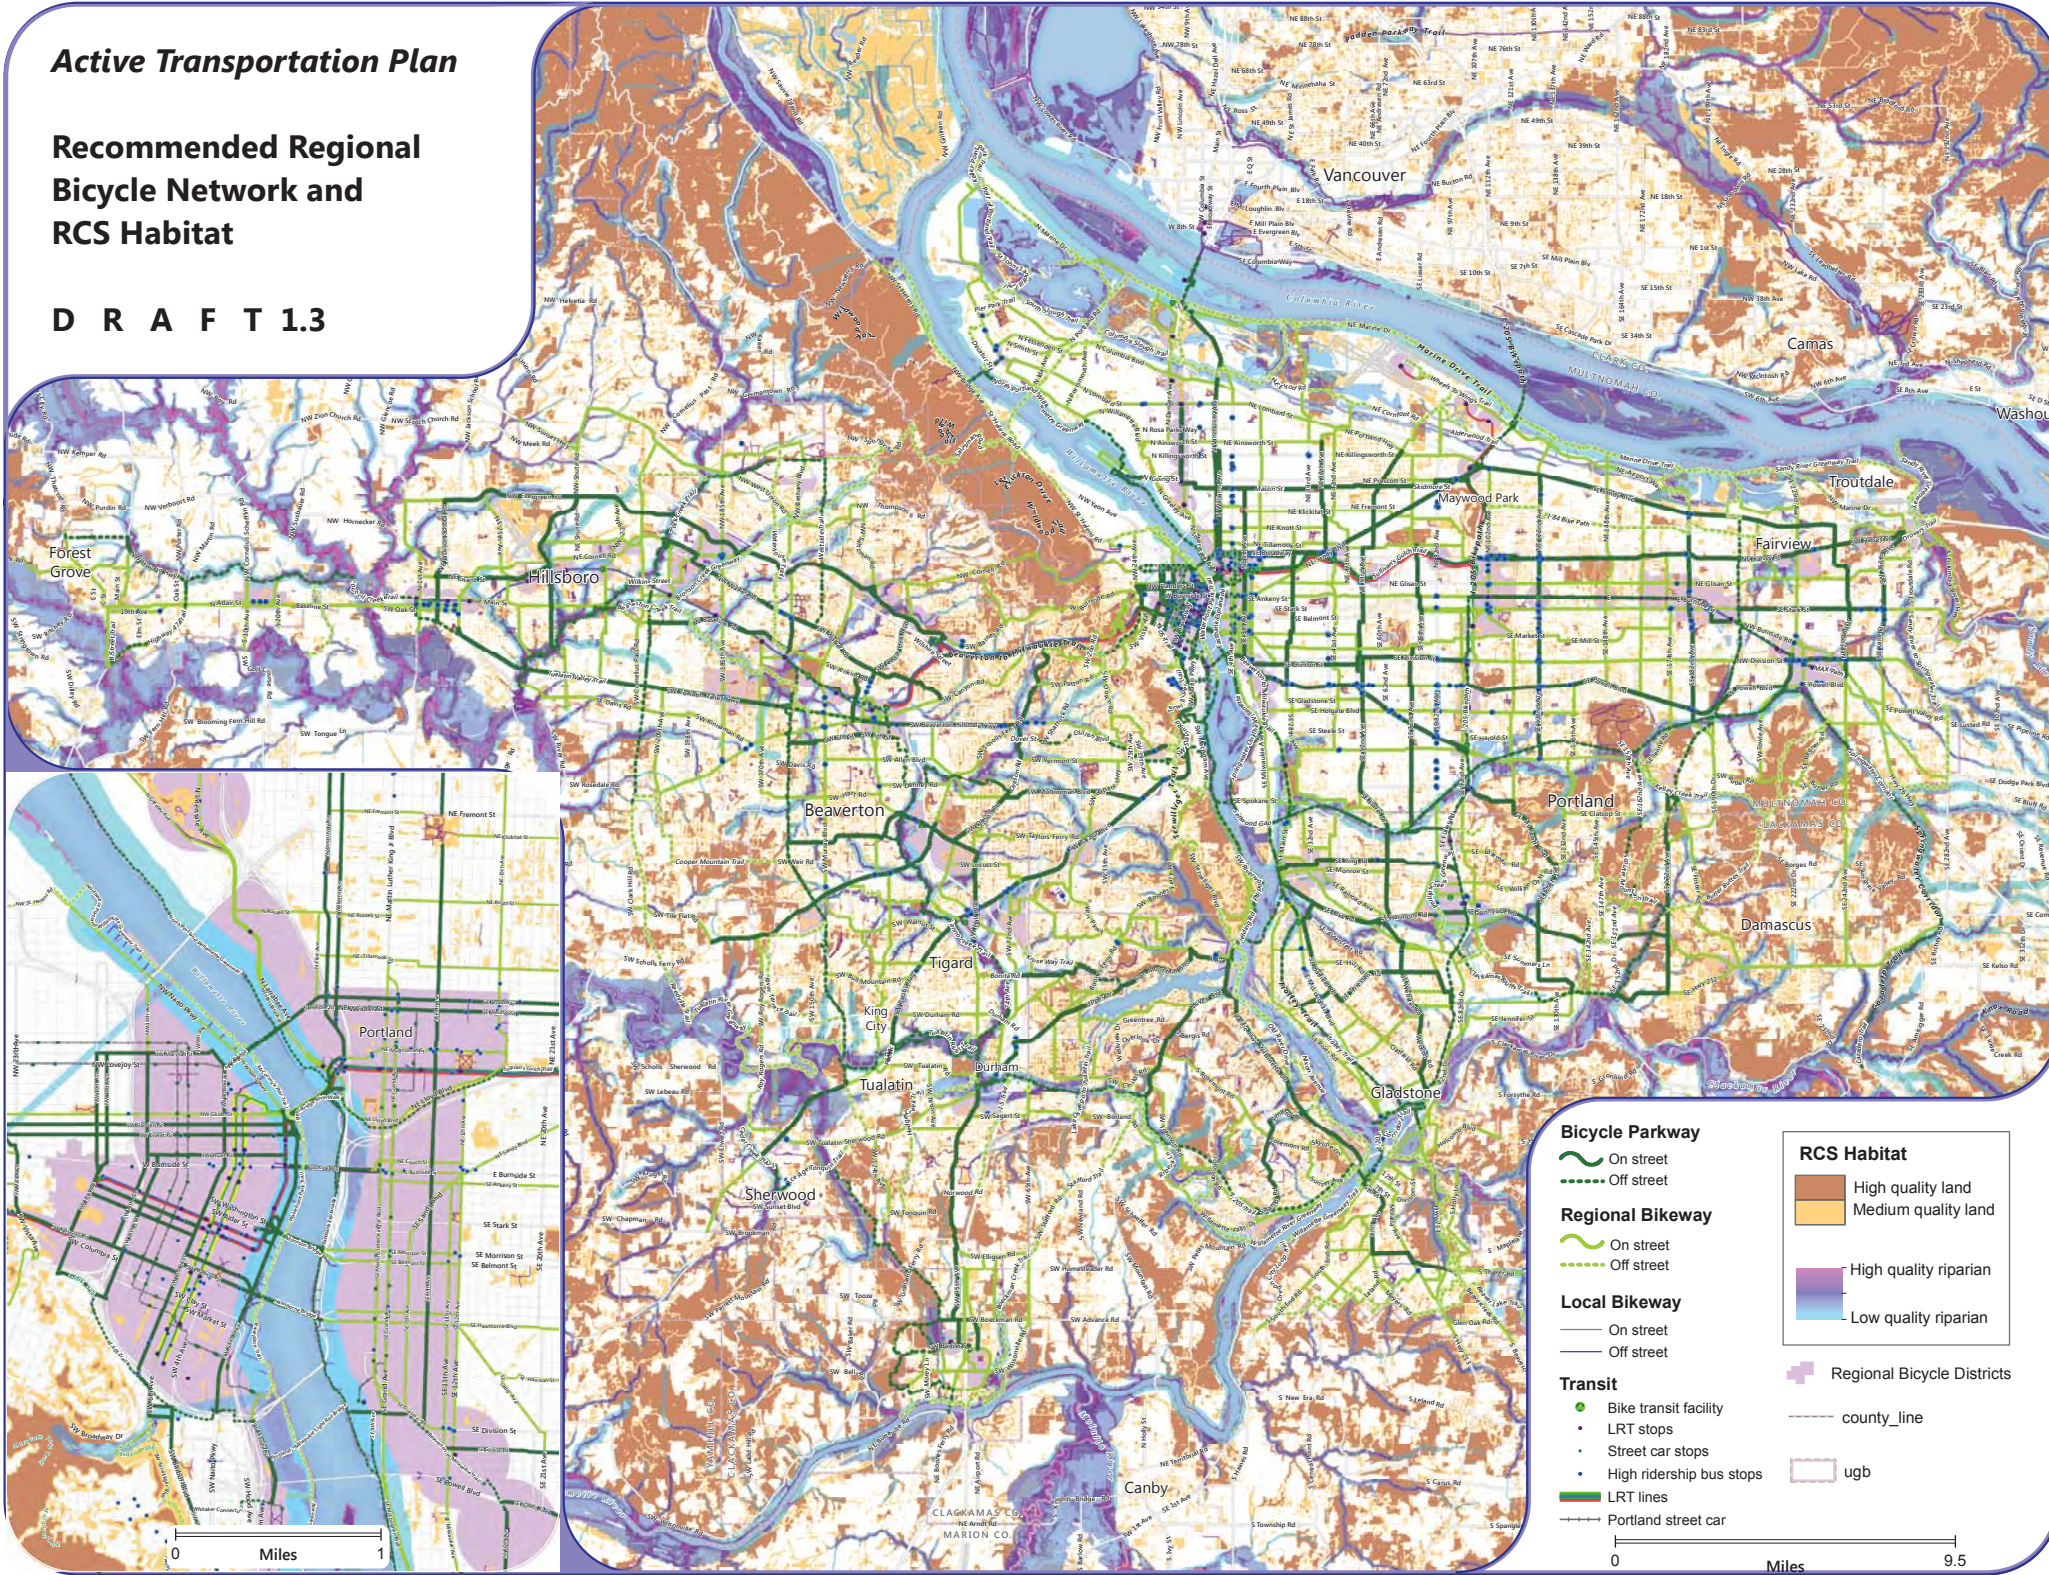

- Green Trails: Guidelines for environmentally friendly trails. Metro.
- Planning Trails with Wildlife in Mind: A handbook for trail planners. Colorado State Parks.
- For regional data, Regional Conservation Strategy for the Greater Portland Vancouver Metropolitan Area. Intertwine and Metro.
- For local planning, resources such as Title 13, local wetland inventories, and local tree cover maps are useful.

CHAPTER 12: POLICY RECOMMENDATIONS

Five policies listed below build on existing pedestrian and bicycle policies identified in the 2035 Regional Transportation Plan. These policies are intended to help communities achieve adopted local and regional goals, outcomes, objectives and targets.

Corresponding **actions** to implement the policies have been identified. Unless otherwise noted, Metro is considered the lead agency for the actions, working in partnership with cities and counties, jurisdictions, agencies and stakeholders. Most actions will require further engagement and discussion with stakeholders and will be implemented over time.

Policy 1. Make walking and bicycling the most convenient and enjoyable transportation choices for short trips.

Metro actions to implement policy

- 1.1 Support jurisdictions and agencies to implement the regional active transportation network according to the Principles for the Regional Active Transportation Network, and encourage use of the ATP design guidelines.
- 1.2 Work with jurisdictions, agencies and stakeholders to identify and encourage the implementation of projects that connect people to destinations that serve essential daily needs, including schools, jobs, parks and nature, transit, services and urban centers, especially in areas where there is a high level of demand for walking, bicycling and transit service.
- 1.3 Work with jurisdictions, agencies and stakeholders to support projects and plans to include way finding, street markings and clear connections to make the regional pedestrian and bicycle networks consistent, easy to navigate on foot or by bicycle. Provide data in an open format to support third-party mobile application and map development.
- 1.4 Work with partners to seek opportunities to implement recommendations for pedestrian and bicycle safety improvements identified in the 2012 Regional Transportation Safety Plan, including lighting, crossing improvements and protected bicycle facilities.
- 1.5 Encourage jurisdictions and agencies to include education and encouragement in transportation projects in order to raise awareness, increase safety and increase the use of completed projects.
- 1.6 Work with partners to identify opportunity areas where short trips made by auto might be easily replaced by walking and bicycling and support the development of projects and programs, such as Drive Less Save More and Bike Share, in those areas. Short trips are generally defined as one way trips less than three miles.
- 1.7 Work with jurisdictions and agencies to provide bicycle parking, bus stop shelters and safe crossings at transit stations and stops where applicable.

Policy 2. Develop a well-connected regional network of complete streets and off-street paths integrated with transit and nature, and prioritizing safe,

convenient and comfortable pedestrian and bicycle access for all ages and abilities.

Metro actions to implement policy

- 2.1 Encourage the use of complete streets checklists for planning and project development. Many cities are using checklists to better integrate all transportation modes into projects and to ensure that environmental impacts of projects are being considered. Complete streets is a transportation policy and design approach where streets are planned, designed, operated, and maintained to enable safe, convenient and comfortable travel and access for users of all ages and abilities regardless of their mode of transportation.
- 2.2 Partner with lead agencies to prioritize pedestrian and bicycle projects in areas where the state and region are actively trying to encourage multi-modal travel.
- 2.3 Work with jurisdictions, agencies and stakeholders to emphasize the need for physically separated pedestrian and bicycle facilities, improved crossings, lighting and other safety features on roadways with high traffic speeds, volumes, or heavy truck traffic. Physically separated bicycle facilities include standard bicycle lanes, buffered bicycle lanes and cycletracks. In instances where enhanced safety designs are not feasible, lead agencies should work to identify alternate routes that provide a safe, direct and parallel alternative.
- 2.4 Endorse the use of the National Association of City Transportation Officials Bike Design Guide and Washington County Bike Design Tool Kit as best bicycle design practices.
- 2.5 Develop design guidelines for transit and bicycle interaction, especially at transit stops and stations and along light rail and streetcar tracks.
- 2.6 Develop design and operation guidelines for regional trails as transportation facilities. Include conservation experts to provide guidance on planning and designing trails that protect and enhance the natural environment.
- 2.7 Work with jurisdictions, agencies and stakeholders to identify best practices and successful case studies integrating bicycle, pedestrian and freight facilities, especially within constrained roadways, to guide future planning and project development.
- 2.8 Work with jurisdictions, agencies and stakeholders to update the Regional Transportation Plan in 2014 with the recommended network principles, ATP pedestrian and bicycle networks and map updates, functional classifications, suggested design guidelines, policies and implementing actions.
- 2.9 Work with jurisdictions, agencies and stakeholders on the 2018 update of the Regional Transportation Plan to determine if changes to the Regional Transportation Functional Plan are needed to support implementation of local transportation system plans and the Regional Transportation Plan.
- 2.10 Work with jurisdictions, agencies and stakeholders to consider adding pedestrian and bicycle projects to the Regional Transportation Plan during Regional Transportation Plan updates that will complete the recommended ATP pedestrian and bicycle networks.
- 2.11 Encourage and work with state and local jurisdictions and agencies to update transportation system plans and comprehensive plans to be consistent with the ATP and include the regional pedestrian and bicycle network routes.

- 2.12 Work with jurisdictions, agencies and stakeholders to consider developing criteria for prioritizing Regional Transportation Plan projects.
- 2.13 Coordinate pedestrian, bicycle and transit investments with the Regional Transportation Option program and grants to deliver complete corridors for active travel. Provide outreach and engagement to inform partners about RTO grants.
- 2.14 Coordinate pedestrian, bicycle and transit investments with the Transportation System Management Options program and grants to deliver complete corridors for active travel.
- 2.15 Work with partners, including the Oregon Department of Transportation and TriMet, during the next policy update of the Metropolitan Transportation Improvement Plan (MTIP) to consider implementing recommendations of the ATP through development of the MTIP project list and Regional Flexible Funds policies.

Policy 3. Ensure that the regional active transportation network equitably serves all people.

Metro actions to implement policy

- 3.1 Develop best practices on engaging underserved communities on active transportation projects.
- 3.2 Work with Transportation Management Associations, Safe Routes to School programs and partner organizations to seek funding to provide awareness programs and address barriers to active transportation.
- 3.3 Work with cities, counties, agencies and jurisdictions to identify and encourage the implementation of pedestrian and bicycle projects that increase safety and access to destinations in areas with minority, low income, youth and elders, disabled and low English proficiency populations.

Policy 4. Complete the regional pedestrian and bicycle networks.

Metro actions to implement policy

- 4.1 Work with partners in the 2014 and future updates of the Regional Transportation Plan to refine existing Regional Transportation Plan performance measures and targets to better meet active transportation goals and new federal performance measure requirements under MAP-21.⁸² Consider developing and adopting a ‘complete network’ and complete streets policy and performance target where the regional pedestrian and bicycle networks are completed to match roadway network percentage of completeness.
- 4.2 Further develop the regional Bicycle Comfort Index and Pedestrian Comfort Index to help identify areas in the regional pedestrian and bicycle network that do not provide a comfortable level of service for people of all ages and abilities.

⁸² See Chapter 13.

- 4.3 Work with stakeholders to explore developing a policy in the Regional Transportation Plan and Regional Transportation Functional Plan to complete pedestrian and bicycle networks through maintenance roadway projects.

Policy 5. Utilize data and analyses to guide transportation investments.

Metro actions to implement Policy

- 5.1 Support the collection and maintenance of regional pedestrian and bicycle data by:
- working with jurisdictions, agencies and stakeholders to identify desirable and practical data to be collected and maintained at a regional level;
 - developing a regional plan for bicycle count locations to support the regional bicycling modeling tools;
 - developing a method to count and estimate pedestrian activity to support development of regional pedestrian modeling tools;
 - continue to support and develop Metro’s leadership on regional trail counts.
- 5.2 Collaborate with local, state, and federal partners to develop new, and refine existing, transportation models and forecasting tools. Use tools to accurately predict pedestrian and bicycle travel demand generated by capital and programmatic improvements, model system performances that include bicycling and walking, and demonstrate the effect of increased active transportation on auto traffic volumes.
- 5.3 Work with partners to support the Oregon Household Activity Survey and to include the survey of pedestrian and bicycle activity, including the relationship between bicycle and transit travel in the region.
- 5.4 Partner with health organizations to explore measuring and possibly incorporating health outcomes, such as levels of physical activity into regional plans.
- 5.5 Support research efforts to help build appropriately sized bike parking at transit stations, and to better understand potential barriers to usage.
- 5.6 Work with jurisdictions, agencies and stakeholders to encourage the use of transportation impact analyses tools, such as Multi-Modal Level of Service analysis, in planning, project development, development review, etc. that take into account transit and active transportation needs and consider land use context in all recommendations.
- 5.7 Utilize the data, analysis, findings and recommendations from the ATP to inform actions in regional and corridor planning and investment strategies to help address climate change and economic development.
- 5.8 Provide, utilize and encourage partners to utilize data from the Regional Conservation Strategy, including habitat, riparian and sensitive land inventories when developing pedestrian and bicycle plans, master plans and projects.

Secure bicycle parking at Wilsonville's SMART Central Station. Bicycle parking is a key element to making an integrated active transportation network work.

"An Active Transportation Plan for the Metro region is more than just a planning exercise; it will result in achieving goals we have set to enhance quality of life and economic development opportunities by defining a quality regional system for walking and biking."

~Katherine Kelly, City of Gresham Transportation Planning Manager

CHAPTER 13: MODAL TARGETS AND PERFORMANCE MEASURES

Performance measures and targets are important for measuring progress and maintaining accountability. The 2035 Regional Transportation Plan developed performance targets and measures directly measuring with active transportation – Safety, Active Transportation, Basic Infrastructure and Access to Daily Needs.⁸³ MAP-21 is the most recent surface transportation funding legislation. A fundamental element of the legislation is its focus on performance management. The legislation creates new requirements on state transportation departments, transit agencies, and metropolitan planning organizations to track and report performance for safety, infrastructure condition, congestion reduction, system reliability, freight movement and economic vitality, environmental sustainability, and reduction of project delivery delays.⁸⁴ Performance outcomes related to active transportation will play a role in achieving these targets.

The ATP recommends maintaining the current Active Transportation Mode Share and Safety Targets, as described below, with updated the data reference points.⁸⁵ Targets for Basic Infrastructure and Access to Daily Needs are being further developed through the update of the Regional Transportation Plan.

Active Transportation: By 2035, triple the walking, biking and transit mode shares compared to 2010 modeled mode shares within urban growth boundary.

| Active transportation mode | 2010 modeled mode share for all trips (4-county area) | 2035 modeled mode share for all trips with full build out of 2035 State RTP Network | Active Transportation Target (tripling of 2010 modeled mode share) |
|----------------------------|---|---|--|
| Transit | 3.8% | 4.9% | 11.4% |
| Walking | 8.9% | 9.6% | 26.7% |
| Bicycling | 2.8% | 3.1% | 8.4% |

⁸³ 2035 Regional Transportation Plan, Chapter 2, Section 2.3.1. Other targets, including Climate Change, Travel and Affordability are impacted by increased levels of walking and bicycling, are not addressed by the ATP.

⁸⁴ Moving Ahead for Progress in the 21st Century (MAP-21) was signed into law in 2012 creating the most significant federal transportation policy shift since the 1991 Intermodal Surface Transportation Efficiency Act (ISTEA).

⁸⁵ The original target for active transportation: “By 2035, triple walking, biking and transit mode share compared to 2005.” The original target for safety: “By 2035, reduce the number of pedestrian, bicyclist, and motor vehicle occupant fatalities plus serious injuries each by 50% compared to 2005.”

Safety: By 2035, reduce the number of pedestrian, bicyclist, and motor vehicle occupant fatalities plus serious injuries each by 50% compared to five year levels based on data in the in the Metro State of Safety 2011 Report (April 2012).

| Number of serious and fatal crashes by mode, within Urban Growth Boundary | | | | |
|---|-----------|------------|---------|---------------|
| | All Modes | Pedestrian | Bicycle | Motor Vehicle |
| 2007-2011 | 496 | 63 | 35 | 398 |

Basic Infrastructure: “By 2035, increase by 50 percent the number of essential destinations accessible within 30 minutes by trails, bicycling and public transit or within 15 minutes by sidewalks for all residents compared to 2005.” This target and the Access target below will be updated in the update of the Regional Transportation Plan.

Access to Daily Needs: “By 2035, increase by 50 percent the number of essential destinations accessible within 30 minutes by bicycling and public transit for low income, minority, senior and disabled populations compared to 2005.” This target will be updated in the in the update of the Regional Transportation Plan. In addition to transportation targets, the 2035 Regional Transportation Plan provides two sets of measures for evaluating the overall transportation system: RTP System Evaluation Measures and RTP System Monitoring Performance Measures.

Several of these measures are useful for evaluating and monitoring progress in active transportation. In addition to these measures, the **ATP recommends that the following additional performance measures be measured in subsequent updates of the ATP:**

1. Bicycle and pedestrian miles traveled (total and per capita).
2. Percent increase in bicycle network separated from traffic.
3. Percent of pedestrian system completed region-wide and by mobility corridor.
4. Percent of regional trails completed.
5. Percent of regional bicycle system with low Bicycle and Pedestrian Comfort Index improved, region-wide and by mobility corridor and cycle analysis zone.
6. Increase in density of regional bicycle network region-wide and by mobility corridor.
7. Increase in connectivity of regional bicycle and pedestrian networks region-wide and by mobility corridor.

For information purposes, performance and evaluation measures from the 2035 Regional Transportation Plan are provided below.

Current 2035 Regional Transportation Plan System Evaluation Measures⁸⁶

1. Vehicle miles traveled (total and per capita)
2. Total delay and cost of delay on the regional freight network in mid-day and PM peak
3. Motor vehicle and transit travel time between key origin-destinations for mid-day and 2-HR PM peak
4. Congestion - Location of throughways, arterials, and regional freight network facilities that exceed RTP motor vehicle-based level of service thresholds in mid-day and 2-HR PM peak
5. Mode share and non-drive alone trips system-wide, by mobility corridor and for central city and individual regional centers (Number of daily walking, bicycling, shared ride and transit trips and % by mode)
6. Transit productivity (transit boarding rides per revenue hour) for High Capacity Transit (HCT) and bus
7. Number and percent of homes within ½-mile of regional trail system
8. Number and percent of homes and environmental justice communities (census data) within ½-mile of HCT or ¼-mile frequent bus service
9. Tons of transportation-related air pollutants (e.g. CO, ozone, and PM-10)
10. Tons of transportation-related greenhouse gas emissions (e.g. CO₂)
11. Percent of projects that intersect high value habitat areas

Current Proposed Regional Transportation Plan System Monitoring Performance Measures⁸⁷

1. Vehicle miles traveled (total and per capita)
2. Average trip length by mobility corridor
3. Motor vehicle and transit travel time between key origin-destinations for mid-day and PM peak
4. Congestion - Location of throughways, arterials, and regional freight network facilities that exceed RTP motor vehicle-based level of service thresholds in mid-day and PM peak
5. Travel time reliability on throughways (buffer index – additional time added to ensure on time arrival 95% of the time)
6. Average incident duration on throughway system
7. Number and share of average daily shared ride, walking, bicycling and transit trips region wide, by mobility corridor and for the Portland central city and individual regional centers
8. Transit productivity (transit boarding rides per revenue hour) for High Capacity Transit and bus

⁸⁶ Chapter 5, 2035 Regional Transportation Plan

⁸⁷ Chapter 5, 2035 Regional Transportation Plan

9. Percent of regional pedestrian system completed region-wide and by 2040 centers and RTP transit-mixed-use corridor
10. Percent of regional bicycle system completed region-wide and by mobility corridor
11. Number and percent of households and jobs within 30 minutes of central city, regional centers, and key employment/industrial areas for mid-day and PM peak
12. Number of fatalities, serious injuries and crashes per capita for all modes of travel region-wide. [The ATP recommends changing this to measurement to per vehicle mile traveled.]
13. Average household combined cost of housing and transportation
14. Tons of transportation-related air pollutants (e.g. CO, ozone, and PM-10)

Lighting is a crucial part of pedestrian and bicycle safety. Lighting intersections and routes makes it easier for pedestrians and bicyclists to be seen. Photo: Michael Ronkin.

“The region is aging, young children cannot drive, and good freight depends on smarter mobility. This plan provides a road map for meeting the many needs of our growing, diversifying region.”

~Stephanie Routh, Oregon Walks!
Executive Director

CHAPTER 14: FUNDING THE ACTIVE TRANSPORTATION PLAN

As a regional government Metro has a unique role in developing the regional pedestrian and bicycle networks. Metro allocates federal funding that historically has provided over 40% of all funding for regional trails and over 20% of all funding for other pedestrian and bicycle projects. Metro's regional focus provides an opportunity to link local efforts together into a comprehensive regional network. Keeping in mind the regional focus, Metro's role should be to fund and support projects that are identified on the regional network, require regional coordination, are large or complex, have an impact on regional targets and goals, or need strategic partnerships and long-range planning.

Metro can also take a role in coordinating a funding strategy to develop the regional active transportation network. The funding strategy should use a multi-pronged approach that:

- **Is flexible.** Projects are aligned with different funding opportunities and strategically advanced to make the most of the funding opportunities. Historically, active transportation projects (and transit) have relied much more heavily on federal funding sources than roadway projects; approximately 85% of all funding for active transportation projects in the region is from federal sources.⁸⁸ Declining federal transportation dollars point to the need for flexible funding solutions for active transportation, including more local sources.
- **Leverages existing investments.** Projects that fill critical gaps and link existing facilities making them work more effectively can provide a high return on investment.
- **Is coordinated with other projects to maximize efficiencies.** Integrating active transportation into projects from the beginning (e.g. sewer, roadway maintenance) rather than tacking them on at the end will maximize efficient use of tax payer dollars.
- **Develops a pipeline of projects.** Projects need to be lined up to receive funding for the next stage of development, either from regional flexible funds or other opportunities. Lack of projects that are “shovel ready” – or a pipeline of projects - has been cited by agencies as a barrier to applying for competitive federal grants such as the federal TIGER program or federal sustainability and health related programs.⁸⁹ In a resource scarce financial environment, however, local agencies are reticent to risk spending on development of active transportation projects without some funding assurance for construction. A strategy to support project development of priority projects and development of funding processes that

⁸⁸ Existing Conditions, Findings and Opportunities Report for the ATP, August 2012, Chapter 9: Current Funding.

⁸⁹ TIGER(Transportation Investment Generating Economic Recovery) a discretionary grant program of the Federal Department of Transportation, has funded several region wide active transportation networks, including in Indianapolis and Philadelphia.

provide some funding assurance for active transportation projects will accelerate implementation of the active transportation system.

- **Is strategic.** Active transportation projects can be ‘bundled’ with larger roadway and transit projects to achieve efficiencies and reduce costs, complete streets and improve transit access. Opportunities to make all transportation projects ‘complete’ should be sought out. At the same time, it can be critical to ‘unbundle’ pedestrian and bicycle projects from larger projects if the timeline, cost or size of the larger project may delay the project getting off of the ground for many years. In those instances, opportunities to complete pedestrian and bicycle access should be sought.

Aligning projects with existing funding opportunities

Active transportation projects are developed using a variety of funding sources; sometimes several different funding programs are needed to complete a project from concept to construction. The ATP proposes a funding strategy that aligns projects with different funding opportunities and examines how those opportunities can be utilized most effectively for developing the pedestrian, bicycle and access to transit networks.

1. **Large federal funding opportunities such as TIGER and sustainability grants.** For active transportation projects to be competitive for these types of funding opportunities regional collaboration is essential. Regional partners come together to support active transportation projects of regional significance. Public and private partnerships need to be fostered and projects need to be readied for development. This type of funding opportunity should be sought for projects that are complex, high-profile, cross multiple jurisdictions and require more funding. Examples of such projects include the Hwy 26 Trail, Sullivan’s Gulch Trail, Bicycle and Pedestrian District development, and the Council Creek Trail.
2. **Oregon Department of Transportation Enhance and Fix-It programs.** ODOT administers several streams of funding for which active transportation projects are eligible. Federal and state funding sources (including ODOT’s portion of 1% of gas tax revenues dedicated to bike and ped) are organized into two main programs, Enhance and Fix-it.⁹⁰ New pedestrian and bicycle capital projects (including trails) are funded primarily through the Enhance program. The Fix-it program is focused on maintaining the existing infrastructure and safety. Many roadways do not provide adequate pedestrian and bicycle facilities, including trail crossings of roadways, and therefore impact safety for all users. The Fix-it program could be considered for funding roadway maintenance that includes adding missing facilities and improving safety.

⁹⁰ Oregon’s landmark “Bike Bill” requires that a minimum of 1% of all collected gas tax revenues be dedicated to bicycle and pedestrian projects. Maintenance of projects is allowed. The state, cities and counties are allowed to spend more than 1% of gas tax revenues on bicycle and pedestrian projects.

- 3. Statewide trail funding programs.** Though MAP-21, the federal transportation bill, eliminated the federal Recreational Trails Program (RTP), states could choose to continue funding for the program. Oregon chose to continue the program which is administered by Oregon State Parks. The Oregon Department of Transportation administers the Urban Trail Fund. The Urban Trail Fund is currently unfunded, but along with the Recreational Trails Program, presents an opportunity to seek new funding for regional trails. For the first time active transportation projects are eligible for Connect Oregon funds (funds generated by the lottery). Approximately \$42 million is available in Connect Oregon V and pedestrian and bicycle projects not in the road right of way are eligible for funding.⁹¹
- 4. Transit related funding.** TriMet and SMART directly receive and allocate federal funding from the Federal Transportation Authority (FTA). Under new FTA rules, pedestrian and bicycle projects within a 3-mile radius of transit stops are eligible for some of these funds, particularly New/Small Starts funding. This funding presents an opportunity to support access to transit. Because these funds are managed by transit agencies and incorporated into larger transit capital projects, the costs of administering the projects can be lower than smaller stand alone pedestrian/bicycle capital projects. Identification and consideration of pedestrian and bicycle access to transit needs by agencies and project partner local agencies during planning and project development is important to increasing progress of the active transportation network.
- 5. Regional Flexible Funds.** Metro allocates federal funds, including Congestion Management and Air Quality (CMAQ) funds and Transportation Alternative Program (TAP) funds, which fund a substantial amount of active transportation projects in the region. Strategically utilizing these types of funds is key to a successful funding strategy. The funds present the opportunity to develop a pipeline of projects and to complete and expand the existing network to reach regional and local goals. Funding continuity and certainty can help develop a pipeline of projects. Regional Flexible funds have been used in this way to implement complex transit projects in the region.
- 6. Special and short term funds.** These types of funds are usually one-time fees, taxes or bond measures that target specific projects and outcomes. They can include property taxes, bond measures, and local improvement districts. Developing a regional active transportation fund has been raised as one way to increase funding and achieve active transportation goals. This approach would need more exploration and substantial support. The region has already passed several regional and local bond measures have passed that have provided funding for active transportation. Metro and Tualatin Hills Park and Recreation District has passed bond measures that have been used to acquire land for trails and to construct trails.

⁹¹ Eligible projects include trails, wayfinding, bicycle parking, bridges, tunnels, bikesharing, and bus bike racks. A 20% local match is required.

- 7. Local sources of transportation funding.** Local funding is crucial to the active transportation funding strategy, for filling gaps, enhancing access to transit and providing the local matching funds needed to be competitive for grants. Local funding revenues for transportation (including trails) include city and county allocations of the statewide gas tax, include system development charges (SDCs) which are tied to new development; traffic impact fees (TIFs); street utility fees; registration fees; vehicle parking fees; and property taxes. While eligible, active transportation projects are not always included in the indentified capital needs lists for these types of funding. Local jurisdictions may want to consider setting a 'need rate' for local funding sources to include identified pedestrian, bicycle and transit stop capital projects as part of local transportation system fee structures. The development community also provides funding for pedestrian and bicycle improvements conditions of approval and frontage improvements, an important way that communities improve areas for walking and bicycling.

Cost estimates for the regional active transportation network

Programmed stand-alone bicycle, pedestrian and trail projects account for approximately 6% of the \$20 billion of projects identified in the 2035 Regional Transportation Plan.⁹² These projects represent a substantial number of the projects needed to complete the regional active transportation network. However, the list does not include all of the projects needed for a complete regional pedestrian and bicycle network developed according to the Guiding Principles identified in Chapter 6.

To better understand the funding needs for developing out the regional network, the ATP developed general planning level cost estimates for completing, upgrading and expanding the regional active transportation network.⁹³ Cost assumptions used to develop the planning level cost estimates can be found in Appendix 2. Cost estimates are general per mile or per pedestrian/bicycle crossing (costs were not developed for specific projects) in order to provide a ball-park figure of the potential cost of completing the network.

The total estimated cost for completing, upgrading and expanding the regional pedestrian and bicycle networks is approximately \$3,280,000,000. Planning level cost estimates are shown in Table 2, below. Included in the total cost are the project costs identified in the 2035 Regional Transportation Plan, for \$1,283,000,000.

⁹² 2035 Regional Transportation Plan, financially constrained and state project lists. Standalone projects are bicycle, pedestrian and trail projects that are not included as part of a larger roadway or transit project. Refer to Chapter 3 of the 2035 Regional Transportation Plan.

⁹³ At this time, planning level cost estimates are identified only for the Bicycle and Pedestrian Parkways. Cost estimates include building new facilities not already identified in the 2035 Regional Transportation Plan project list and upgrading existing facilities (those already built or that have a project in the 2035 state Regional Transportation Plan project list). The cost estimates assume a high level of design.

Table 2: Planning Level Cost Estimates for the Regional Active Transportation Network

| Projects | Cost (millions) |
|--|-----------------|
| 2035 RTP sidewalks, bike facilities and trails (federal and state lists) ⁹⁴ | \$1,283 M |
| New ATP sidewalks, improved crossings, bike facilities and trails | \$1,550 M |
| New upgrade to existing bike and trail projects ⁹⁵ | \$447 M |
| Total | \$3,280 M |

In Table 2, new projects include sidewalks to fill all gaps in the regional pedestrian network, as defined in the “Regional Pedestrian Network Analysis”, completion of regional trail projects not already included in the 2035 Regional Transportation Plan project list; separated 8-10’ in roadway bikeways on the regional bicycle network as defined in the “Regional Bicycle Network Evaluation”; and improved crossings as identified in the “Regional Pedestrian Network Analysis”.

Appendix 1 provides a list of corridors and districts identified in the regional active transportation network and projects from the 2035 Regional Transportation Plan associated with each of the corridors and districts, as well as project needs. The list does not provide project costs for specific projects.

Current expenditures on active transportation

Investments in active transportation have increased since the early 1990s. Nationally, in 1990, \$6 million in federal funds spent on bicycling and walking projects. In 2010, \$1.04 billion, 2% of the federal surface transportation budget, was spent on pedestrian and bicycle projects.

Federal and state capital transportation investments represent an important source of funding for active transportation. From 1995 -2010 the region invested approximately \$10 million/year in stand-alone pedestrian, bicycle and trails, or 3% of all federal and state capital transportation funds.⁹⁶ Additionally, local jurisdictions allocate between 1% and 6% of local transportation dollars, such as gas tax revenues, system development charges or urban renewal funds, to bicycle and pedestrian projects. Many pedestrian and bicycle projects are also completed as part of larger roadway projects or as part of complete streets projects. Determining the level of funding going towards active transportation elements of these projects can be challenging. Some jurisdictions assume that pedestrian and bicycle elements account for approximately 25% of the total project cost. Better data is needed to adequately understand the level of investment

⁹⁴ Chapter 6, 2035 Regional transportation Plan

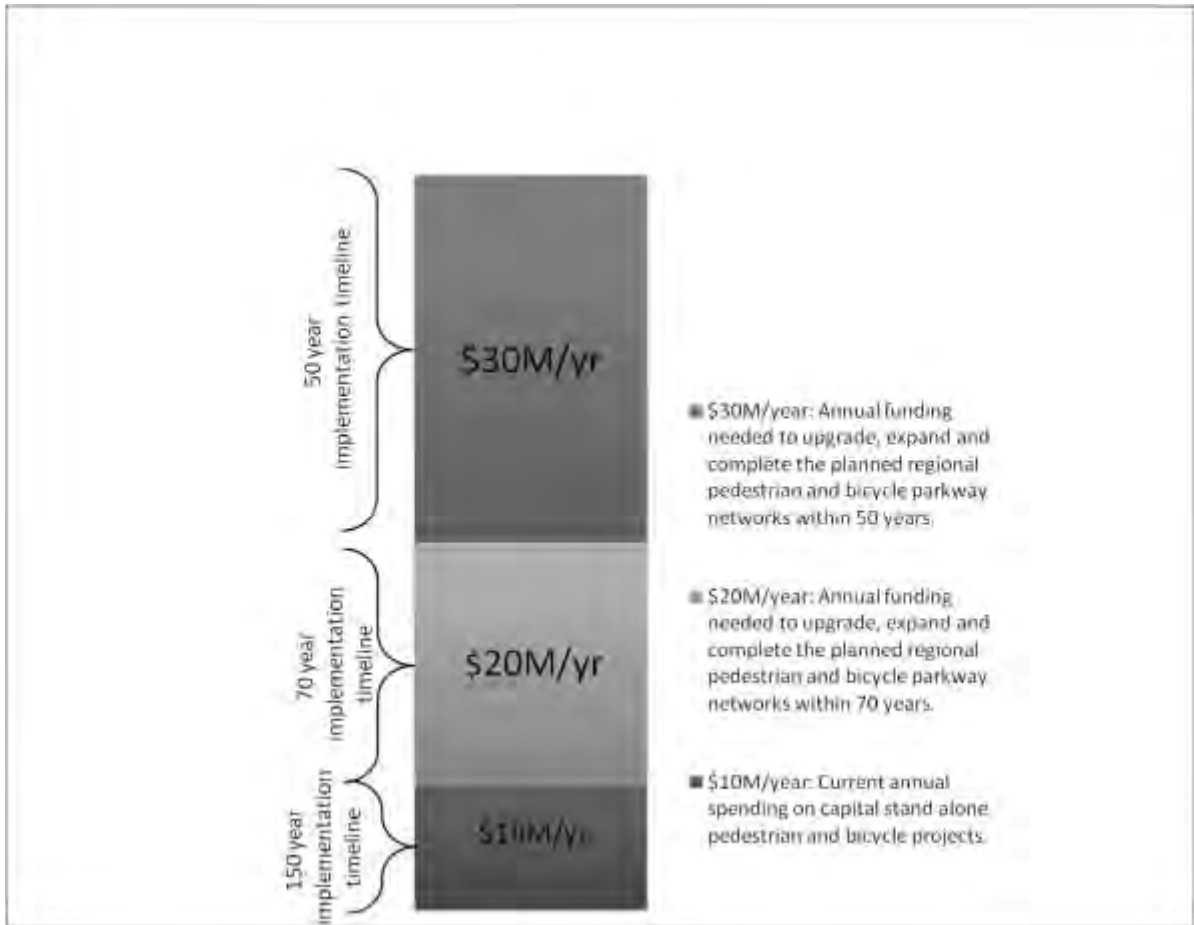

⁹⁵ Costs for upgrading sidewalks is not included; lack of regional data on sidewalk condition prevented analysis of where sidewalk upgrades may be needed (e.g. narrow, no curb cuts, etc).

⁹⁶ Existing Conditions, Findings and Opportunities Report for the ATP, August 2012, Chapter 9: Current Funding.

going towards active transportation, but it is fair to assume that it is currently far below levels of investments for other modes.

At the current rate of funding for stand-alone bicycle and pedestrian projects, approximately \$10 million/year, it is estimated to take approximately 150 years to complete and expand the regional pedestrian and bicycle network.

Table 3: Funding Level Scenarios and Implementation Timelines for the Regional Active Transportation Network

Metro, 2013. Funding levels are in 2013 dollars.

Maintenance

While bicycle and pedestrian facilities require much less maintenance than other transportation facilities, funding for active transportation should include assumptions for maintenance of facilities, such as sweeping bicycle lanes, replacing sidewalks or trails damaged by tree roots, replacing signage, removing trash and graffiti, servicing signals and counters, and caring for trees and foliage that serve as buffers. Maintaining pedestrian and bicycle facilities is an important part of encouraging and supporting walking and bicycling and providing good access to transit.

Average maintenance costs vary depending on the type and design of the facility and how much maintenance a jurisdiction performs. Annual maintenance costs for sidewalks can range from \$1,000 to \$4,000/mile, bicycle lane maintenance can average at about \$2,000/mile, and shared use paths/trails can average between \$2,000 and \$8,000/mile.⁹⁷ Using an average cost of \$2,000/per mile for sidewalks, bicycle facilities (e.g. bike lane, bike boulevard), and trails a general estimated cost to provide maintenance for the existing regional active transportation network is approximately \$3 million/year.⁹⁸

Table 4: Estimated Annual Maintenance Costs, 2010 Regional Pedestrian and Bicycle Network

| | Sidewalks | Trails | Bikeways |
|---------------------------|--------------------|-----------|-----------|
| Miles in regional network | 946 | 121 | 450 |
| Cost at \$2,000/mile | \$1,892,000 | \$242,000 | \$900,000 |
| Total | \$3,034,000 | | |

Using the same approach, estimated maintenance costs for the completed active transportation network in 2035 are approximately \$6 million/year in 2012 dollars.⁹⁹

Table 5: Estimated Annual Maintenance Costs, 2035 Regional Pedestrian and Bicycle Network

| | Sidewalks | Trails | Bikeways |
|---------------------------|--------------------|-----------|-------------|
| Miles in regional network | 1462 | 460 | 972 |
| Cost at \$2,000/mile | \$2,924,000 | \$920,000 | \$1,944,000 |
| Total | \$5,788,000 | | |

⁹⁷ Based on a summary review of maintenance costs in various cities.

⁹⁸ In 2012 dollars

⁹⁹ The estimated cost in 2035 would be approximately \$12 million/year.

CHAPTER 15: IMPLEMENTATION STRATEGIES AND PROJECTS

Focusing investments strategically to get the highest return on investment is important. However, in many ways the region has not yet reached a decision place of which walking and bicycling projects to prioritize; if the goal is to increase opportunities to walk, bicycle and take transit, completion of the networks is needed.

The overall recommended approach of the ATP is that completion of the entire regional pedestrian and bicycle networks, so that they are connected and safe, should be a high priority and key focus of transportation improvements in the region. Until the networks are complete it is not possible to expect substantial outcomes, except in discrete sub-areas, or walking and bicycling “sheds.” In sub-areas where there is a high level of completion, connectivity and supporting land uses and levels of walking and bicycling and transit use can be quite high. A helpful analogy is to consider how effective our highway or rail systems would be if they had gaps or entire missing sections.

The implementation strategies outlined below are intended to be implemented by Metro in partnership with agencies, jurisdictions and other stakeholders.

Strategically investing funding will help achieve desired outcomes sooner and more efficiently and effectively. The ATP evaluated improvements to the regional pedestrian and bicycle networks to provide some guidance on where and how improvements would impact access to destinations, safety, transportation equity and increased walking and bicycling activity. The results of the evaluation can be found in the ATP “2013 Regional Pedestrian Network Analysis” and “2013 Regional Bicycle Network Evaluation” supplemental reports. The evaluations provide broad brush results at a regional scale. These evaluations do not take the place of more detailed evaluations of projects and the impacts of those projects.

Improvements evaluated included filling in sidewalk gaps, completing and extending regional trails, increasing connectivity with crossings and overcoming barriers such as freeways, highways and rivers, and improving or adding bikeways, such as cycletracks, on busy roads.

Recommended implementation strategies

1. **Prioritize all transportation modes together.** Many transportation plans and Capital Improvement Plans have separate prioritized lists for different modes or purposes, such as auto, transit, freight, bicycle and pedestrian. Prioritizing all modes together in one list allows for thinking about transportation systems holistically and will focus on outcomes of the transportation system, rather than on the outcomes associated with individual modes. Such a list, for example, may have a transit/roadway improvement project as the first priority, a freight access project as the second priority and a pedestrian and bicycle bridge as the third priority.

2. **In suburban areas where destinations are farther apart and road connectivity is lower, complete routes that connect to and along transit routes and support routes that provide the most connected and direct bicycle travel.** The diversity of communities, land uses, roadway network patterns and population and employment densities in the region requires that a wide range of approaches be employed to make active transportation feasible. Many communities that have suburban style land use patterns are experiencing success with active transportation.¹⁰⁰ Disconnected roadway networks can be one of the biggest hurdles to bicycle travel; constructing trails or protected facilities along major roadways can provide convenient connections.

3. **Fill gaps in the networks that increase access for the most people and increase levels of walking, bicycling and access to transit.** Evaluation of improvements to the regional pedestrian and bicycle networks provides information on areas (routes, corridors and districts) where improvements increase access for the most people. The ATP “Regional Bicycle Network Evaluation” and the ATP “Regional Pedestrian Network Analysis” identify corridors and districts on the regional pedestrian and bicycle networks where adding improvements will increase access and activity.

Areas in the region that show the highest level of bicycle activity in 2035 (other areas show substantial activity, and all areas of the region show bicycling activity):

- Downtown Portland
- Inner SE Portland
- Outer East Portland/West Gresham
- Central Gresham/Wood Village/Fairview
- SW Portland
- Beaverton - South/Aloha-South
- Beaverton North
- Tigard
- SE Portland – Eastmoreland/Woodstock/Foster
- Inner NE Portland

Roadway routes that show high to moderate bicycle volumes in 2035:

- 17th Ave. connection between Trolley Trail and Springwater Corridor
- 40’s and 50’s Bikeways, Portland
- Barbur Blvd./99 W in Portland and Washington County
- Burnside in East Multnomah County
- Capitol Highway and Kerr Parkway, Portland and Washington County
- Clinton Bike Boulevard in inner SE Portland
- Cully Blvd. Portland

¹⁰⁰ Suburban areas of Assen, Germany provide excellent examples of suburban communities that have successfully integrated active transportation.

- Division Street, Portland to Gresham
- Downtown Portland
- Foster Road in Portland
- Going Street, Portland
- Hall Blvd. Beaverton to Fanno Creek Trail, Washington County
- Hogan Road, Multnomah County
- Iron Mountain Road, Lake Oswego/Washington County (parallel Surf to Turf Trail)
- Kruse Way, Washington County (assumed crossing over I-5)
- Lake Road in Milwaukie
- Main Street, Hillsboro
- Monroe Blvd. Clackamas County
- NE 15th Ave and 20's Bikeway, Portland
- NE Airport Way
- NE Halsey, Multnomah County
- NW Evergreen Rd, Washington County
- Pacific Hwy/Willamette Falls Drive, Clackamas County
- Pimlico Drive, West Linn
- Powell Blvd., especially in inner SE Portland
- Sandy Blvd. in Portland
- Scholls Ferry Road, Washington County
- SE 122nd Ave, East Multnomah County
- SE 136th Multnomah County
- SE 148th Ave, East Multnomah County
- SE 162nd, Multnomah County
- SE 181st Ave, East Multnomah County
- SE Hawthorne Blvd. Portland
- SE Johnson Creek Road, connecting to I-205 Path, Clackamas County
- SE Lincoln, SE Market, SE Mill, Portland/East Multnomah County
- SE Linwood Ave. Clackamas County
- SE Stark St., I-205 to SW 257th, Multnomah County
- SE Sunnyside Road, Clackamas
- SE Thiessen Rd., Clackamas County
- SW 257th, Multnomah County
- SW 5th and 6th Avenues, Beaverton
- SW 72nd, Washington County, between SW Bonita and 99W
- SW Baseline, Washington County
- SW Beaverton Hillsdale Hwy.
- SW Boones ferry Road, Fanno Creek to Wilsonville
- SW Brockman St. Washington County
- SW Canyon Road
- SW Cedar Hills Blvd., Washington County
- SW Dosch Road, Washington County
- SW McDonald, SW Gaard St, Washington County
- SW Multnomah Blvd. Portland/Washington County
- SW Oleson Road, Washington County
- SW Tualatin Sherwood hwy.
- SW Western Ave., Beaverton

- Tualatin Valley Highway, Washington County
- Warner Milne Road, Linn Ave, Central Point Road, Oregon City
- Williams/Vancouver, Portland

Trails that show high to moderate bicycle volumes in 2035:

- Beaverton Creek Greenway, Washington County
- Bronson Creek Greenway, in the North Hillsboro/Bethany areas
- Council Creek Trail
- East Buttes Powerline Corridor Trail, Clackamas, connecting to the Gresham Fairview Trail
- Fanno Creek Trail, Washington County
- Gresham MAX Path
- Gresham-Fairview Trail
- Hwy 26 Trail connecting Portland and Washington County
- I-205 Path
- I-405 trail in Portland (connects to Hwy 26 Trail)
- I-84 Path, Multnomah County
- Lake Oswego to Portland Trail
- Mt. Scot/Scouter Mtn. Trails that connect to the East Buttes Powerline Corridor Trail, Clackamas and Multnomah County
- Oregon City Loop, Clackamas County
- Phillips Creek Trail, connecting to I-205 Path, Clackamas County
- Red Electric Trail/Capitol Highway
- Rock Creek Trail, Hillsboro
- Springwater Corridor Trail
- Sullivan’s Gulch Trail in Portland
- Sunrise Corridor Trail in Clackamas County
- Surf to Turf Trail, parallel to Iron Mtn. Road, Lake Oswego
- Tonquin Trail, Washington County
- Trail along McLoughlin Blvd and the future Portland to Milwaukie Light Rail
- Trolley Trail in Clackamas County
- Tualatin River Greenway Trail between Fanno Creek and Westside Trail
- Waterhouse Trail, Washington County
- Westside Trail
- Willamette River Greenway/Hwy43, south of Lake Oswego, Clackamas County
- Willamette River Bridges

Trails that show a high number of people with increased access to destinations:

- Beaverton Creek Trail
- Bronson Creek Greenway
- Columbia Slough Trail
- Council Creek Trail
- East Buttes Power Line Corridor Trail

- Fanno Creek Greenway
- Gresham / Fairview Trail
- Highway 217 Trail
- Highway 47 Trail
- Hillsdale to Lake Oswego Trail
- Hwy 26 Bike Path/Sunset Transit Center Trail
- I-205 Corridor
- I-84 Bike Path
- Ice Age Tonquin Trail
- Kruse Way Path
- Marine Drive Trail
- Milwaukie LRT Trail
- Mt. Scott/Scouter Mountain Trails
- North Clackamas Greenway
- North Portland Willamette Greenway
- Northwest Portland Willamette Greenway Trail
- Oregon City Loop
- Pearl-Keeler Powerline Trail
- Phillips Creek Trail
- Red Electric Trail
- Rock Creek Trail
- Southwest Portland Willamette Greenway Trail
- Springwater Corridor
- Sullivan's Gulch Trail
- Terwilliger Trail
- Trolley Trail
- Tualatin River Greenway Trail
- Waterhouse Trail
- Westside Trail
- Willamette River Bridges

Pedestrian Corridors that show a high number of people with increased access to destinations via the pedestrian network:

- 122nd Ave. Portland (SE Foster to NE Sandy)
- 181st/182nd Ave. Portland (Powell to NE Sandy)
- 5th/Warner Milne/Beavercreek Rd.
- 82nd Ave. Portland/Clackamas County
- Aloha to Beaverton – Hwy 8 (SW 185th to Hwy 217)
- Aloha to Hillsdale – Beaverton Hillsdale Hwy (Hwy 10)
- Barbur Blvd./99W (SW Hall to Downtown Portland)
- Beaverton to Barbur Blvd. (SW Allen, SW Garden Home Rd, SW Multnomah Blvd)
- SW Canyon Road (Beaverton to Hwy 26)
- Beaverton to Tualatin (SW Hall Blvd, SW 85th, SW Boones Ferry Rd.)
- Boones Ferry Road (Pilkington Rd. to SW Macadam Ave)

- Burnside, Portland to Gresham
- Capitol Hwy – SW 49th in West Portland to SW Macadam Ave.
- Cedar Mill to Portland – (SW Barnes Road/W Burnside Rd), NW Cornell Rd to NW 23rd.
- Clackamas TC to Damascus –(SE Sunnyside Rd/Hwy 212 (Clackamas Boring Hwy)) from I-205 to Hwy 212 at UGB
- Division – SE Grand Ave to NE Kane Drive
- Forest Grove to Cornelius (Hwy 8) – Pacific/19th Ave to Cornelius
- Halsey St. – Hollywood District to Troutdale
- Hillsboro TC to Willow Creek MAX station – (E Main Street/W Baseline Rd) from SW Oak St (Hillsboro) to SW 185th Ave.
- Hillsboro to Aloha (Hwy 8)
- Hillsboro to Cedar Mill –(NE Cornell Road) to SW Murray Blvd in Cedar Mill
- Holgate – 99 E to SE Powell Blvd. via 136th
- Hwy 43 - Portland to Oregon City- 99 E to SE Powell Blvd.
- HWY 8 to Orenco (NW 231st Ave.)
- Interstate Ave. (N Denver Ave, N Interstate Ave, N Russell) Steel Bridge to Hayden Island
- Johnson Creek Blvd. - SE Harney Drive to SE 92nd Ave
- N/NE Killingsworth - N Greeley Ave to Cascade Hwy (NE 82nd Ave)
- Kruse Way - Tigard at I-5 to Boones Ferry Rd.
- McLoughlin Blvd. (UGB to SE Powell)
- Milwaukie to Clackamas TC (SE Harrison/Milwaukie Expy/SE Harmony/SE Sunnyside/SE Lake Rd./SE McLoughlin) 99E at Holgate to I-205 Clackamas TC
- Molalla Ave - 99E/7th Ave Oregon City to Hwy 213
- Murray Scholls to Cedar Mill – (SW Murray Blvd.) HWY 210 to NW Cornell Rd.
- Murray Scholls to Raliegh Hill - Hwy 210 (Scholls Ferry Rd) SW Murray Blvd. to Hwy 10
- NW Bethany Blvd. - NW German Town Rd to NW Cornell
- NW Evergreen
- Orenco to Tanasbourne – (NW 229th/Evergreen) NE Brookwood Pkwy to NW Cornell Rd
- Portland to Damascus (SE Foster Rd.) SE Powell Blvd. to SE Sunnyside Rd.
- Portland to Oregon City – (SE 52nd/SE Flavel/SE Linwood/Webster Rd.) SE Powell Blvd. to SE McLoughlin Blvd. (99E)
- Powell Blvd. – Ross Island Bridge to Gresham
- Prescott – NE 42nd Ave to NE 122nd Ave
- Sandy Blvd. NE Couch to SW 257th Ave.
- SE 155th/Milmain
- Sherwood (99W, SW Sherwood Blvd, SW Oregon St.) Tualatin Sherwood Road to SW Oregon St at SW Murdock Rd.
- Sherwood to Tigard (99W) - Tualatin Sherwood Road to SW Hall Blvd
- SE Stark St. (w/SE Washington couplet) SE 50th Ave to NE Kane Drive.
- SW 185th Ave. to PCC – (SW 185th Ave) Aloha at Hwy 8 to NW Springville Rd. to NW Bethany Blvd.
- SW 206th

- SW Cedar Hills Blvd. Beaverton at SW Farmington Rd. to Hwy 26, Cedar Mill
- SW Oleson Rd./SW Greenburg Rd - Washington Square at Hall Blvd to 99W
- SW Parkway Ave to Wilsonville - SW Boones Ferry at SW Day Rd to SW Town Center Loop
- SW Scholls Ferry Rd.
- Swan Island to St John's Bridge – (Going, Greeley, N Peninsula, N Willis, N Alaska, Fesseden, N Lombard) Going St on Swan Island to St John's, Lombard and N Commando Ave
- Tanasbourne to Beaverton (Walker Road) - SW 185th Ave to SW Canyon Rd.

Pedestrian Districts that show a high number of people with increased access to destinations via the pedestrian network:

- 122nd Ave. Station
- 148th Ave. Station
- Aloha Town Center
- Beaverton Creek Station
- Beaverton Town Center
- Cedar Mill Town Center
- Clackamas Town Center
- Cornelius Town Center
- Division St. Station
- Elmonica Station
- Expo Center Station
- Forest Grove Town Center
- Fuller Rd. Station
- Gateway Town Center
- Gresham Town Center
- Hawthorn Farm Station
- Hayden Island Station
- Hillsdale Town Center
- King City Town Center
- Lake Grove Town Center
- Merlo Rd Station
- Millikan Way Station
- Milwaukie Town center

- Tanasbourne Station
- Tigard Town Center
- Troutdale Town Center
- Tualatin Town Center
- Washington Square Town Center
- West Portland Town Center
- Willow Creek Station

4. **Support projects that increase access and safety for underserved populations.** *The ATP*

“Regional Bicycle Network Evaluation” and the ATP “Regional Pedestrian Network Analysis” identify corridors, districts and areas on the regional pedestrian and bicycle networks where adding improvements will increase access to underserved populations. Increasing access improves safety, especially when projects address issues such as those identified in the Metro2012 Regional Transportation Safety Plan, including crosswalk and intersection lighting, pedestrian crossings on arterials and multi-lane roadways and protected bicycle facilities along roadways with high motor vehicle traffic volumes, speeds and/or high volumes of trucks.

Areas with above average underserved populations that have lower bike network density, compared to other parts of the region, in 2035:

- Forest Grove
- Cornelius
- Hillsboro South
- Hillsboro Central
- Beaverton – East/Raleigh Hills/Washington Square
- Beaverton- South /Aloha South
- Tigard
- Milwaukie – North/ Clackamas Regional Center
- N. Portland – St. Johns
- NE Portland – Cully/Rose City Park/Rocky Butte
- Happy Valley
- Central Gresham/Wood Village/Fairview

Pedestrian Districts with higher percentages of underserved populations:

- 122nd Ave. Station
- 148th Ave. Station
- 82nd Ave. Station
- Aloha Town Center
- Beaverton Town Center
- Beaverton Creek Station
- Bethany Town Center
- Clackamas Town Center
- Cornelius Town Center
- Division St. Station

- Elmonica Station
- Fairview Town Center
- Flavel St. Station
- Forest Grove Town Center
- Fuller Rd. Station
- Gateway Town Center
- Gresham Town Center
- Happy Valley Town Center
- Hillsboro Town Center
- Hillsboro Airport Station
- Killingsworth Station
- King City Town Center
- Lents Town Center
- Merlo Rd. Station
- Millikan Way Station
- Overlook Station
- Parkrose Station
- Pleasant Valley Town Center
- Powell Blvd. Station
- Prescott Station
- Rockwood Town Center
- St. Johns Town Center
- Troutdale Town Center

Pedestrian Corridors with higher percentages of underserved populations:

- 122nd Ave. Portland (SE Foster to NE Sandy)
- 181st/182nd Ave. Portland (Powell to NE Sandy)
- 52nd to MLK via Columbia
- 82nd Ave. Portland/Clackamas County
- NE Alberta – NE MLK to NE 33rd Ave
- Aloha to Beaverton – Hwy 8 (SW 185th to Hwy 217)
- Aloha to Hillsdale – Beaverton Hillsdale Hwy (Hwy 10)
- Beaverton to Hwy 26 (SW Canyon Road)
- Beaverton to Tualatin (SW Hall Blvd, SW 85th, SW Boones Ferry Rd.)
- Burnside (Portland to Gresham)
- Clackamas Hwy (Hwy 224)- Hwy 212-224 to Eagle Creek Hwy
- Clackamas TC to Damascus –(SE Sunnyside Rd/Hwy 212 (Clackamas Boring Hwy)) from I-205 to Hwy 212 at UGB
- Division – SE Grand Ave to NE Kane Drive
- (Fairview to Gresham – (NE 223rd Ave.) - NE Sandy Blvd to E Powell Blvd
- Forest Grove to Cornelius (Hwy 8) – Pacific/19th Ave to Cornelius
- NE Glisan - Sandy Blvd. to NE 102nd Ave
- N Going St.- N Interstate Ave to NE MLK
- NE Halsey St. - Hollywood to Troutdale, SW 257th Ave
- Hillsboro TC to Willow Creek MAX station – (E Main Street/W Baseline Rd) from SW Oak St (Hillsboro) to SW 185th Ave.
- Hillsboro to Aloha (Hwy 8) - Hillsboro UGB to SW 185th Ave

- Hillsboro to Cedar Mill –(NE Cornell Road) to SW Murray Blvd in Cedar Mill
- Holgate – 99 E to SE Powell Blvd. via 136th
- N/NE Killingsworth - N Greeley Ave to Cascade Hwy (NE 82nd Ave)Kruse Way
- N Lombard St., N Columbia- St John's Bridge, West end to NE Martin Luther King Blvd.
- Mississippi/Albina - Fremont and Vancouver to Mississippi to Lombard
- N 1st Ave.
- SW Naito/NW Naito Parkway - SW Barbur to Steel Bridge
- NE 25th/SE 32nd
- Portland to Damascus (SE Foster Rd.) SE Powell Blvd. to SE Sunnyside Rd.
- Powell Blvd. – Ross Island Bridge to Gresham
- Prescott – NE 42nd Ave to NE 122nd Ave
- Rosa Parks, Willamette Blvd (W. Portsmouth connection to Lombard) from N Vancouver Ave to N Richmond Ave.
- NE Sandy Blvd. - NE Couch to SW 257th Ave.
- SE 155th/Milmain
- SE 172nd – SE Foster to Hwy to Hwy 212
- SE 242nd Ave - SE Butler Rd. to SE Roberts Rd.
- SE 242nd/SE Hogan
- SE Stark St. (w/SE Washington couplet) SE 50th Ave to NE Kane Drive.
- SW 185th Ave. to PCC – (SW 185th Ave) Aloha at Hwy 8 to NW Springville
- SW 206th
- SW Cedar Hills Blvd. - Beaverton at SW Farmington Rd. to Hwy 26, Cedar Mill
- Swan Island to St John's Bridge – (Going, Greeley, N Peninsula, N Willis, N Alaska, Fesseden, N Lombard) Going St on Swan Island to St John's, Lombard and N Commando Ave.
- Troutdale to Gresham (NE Kane Drive, SW 257th) - NE Division St. to E Columbia River Hwy
- Vancouver/Williams – Rose Quarter to Rosa Parks
- Woodstock – SE 39th to SE Foster Rd.

Regional Trails with higher percentages of underserved populations:

- Beaverton Creek Trail
- Clackamas River Greenway Trail
- Columbia Slough Trail
- Council Creek Trail
- East Buttes Power Line Corridor Trail
- Fanno Creek Greenway
- Gresham / Fairview Trail
- Highway 217 Trail
- Highway 47 Trail
- I-205 Corridor
- I-405 Trail
- I-84 Bike Path
- Kelley Creek Trail

- Kruse Way Path
- MAX Path
- Mt. Scott/Scouter Mountain Trails
- Pearl-Keeler Powerline Trail
- Peninsula Crossing Trail
- Phillips Creek Trail
- Southwest Portland Willamette Greenway Trail
- Springwater Corridor
- Sunrise Multi-Use Path
- Waterhouse Trail
- Westside Trail
- Willamette River Bridges

5. **Focus active transportation investments to improve access to transit, utilizing the priorities identified in TriMet’s *Pedestrian Network Analysis and access to transit* priorities identified in SMART’s *Transit Master Plan*.** TriMet, in partnership with jurisdictions, agencies and stakeholders, identified ten initial focus areas for improving access to transit.¹⁰¹ The recommendations target pedestrian access, but the improvements will benefit all types of active travel. The ATP recommends focusing investments on the identified focus areas to improve access to transit, including adding secured bicycle parking if possible.

6. **Focus investments in Regional Pedestrian and Bicycle Districts.** These are urban centers with existing or planned high concentration of transit, commercial, cultural, institutional and/or recreational destinations where walking and bicycle travel is attractive, comfortable and safe. Implementation of pedestrian and bicycle infrastructure should be coordinated with land use and development that provide destinations to walk and bike to. The ATP “Regional Bicycle Network Evaluation” and the ATP “Regional Pedestrian Network Analysis” identify areas, corridors and districts on the regional pedestrian and bicycle networks where adding improvements will increase access and activity.

7. **Prioritize projects that remove barriers to pedestrian and bicycle travel, especially if access across the barrier is infrequent.** These types of projects are often challenging and more expensive, therefore prioritization can help move them forward. Projects that provide crossings of major barriers are identified in the ATP project list.

- New light rail bridge in downtown Portland
- Lake Oswego to Portland Bridge
- Hwy 26 Trail
- Trolley Trail Bridge
- Sellwood Bridge

¹⁰¹ The analysis provides a framework and methodology for identifying additional focus areas once the ten areas are improved.

- St. John's Bridge
- Steel Bridge
- Broadway Bridge
- Morrison Bridge
- Burnside Bridge
- Hawthorne Bridge
- Crossings of Hwy 26, including the Westside Trail
- Gaps in the I-205 Trail
- Crossings of I-84
- Crossings of I-205

8. **Include education programs, encouragement programs and initiatives such as Bike Share programs.** Just as important as on-the ground projects are programs that make it easier for people to walk, ride bikes and access transit. Funding decisions should consider the importance of these types of programs
9. **Support 'game changing' projects that will build on the potential to increase levels of walking and bicycling.** Support high priority projects, such as those identified in the BTA's Blueprint for Bicycling and priority areas for walking, safe crossings, access to transit and connectivity, as identified by Oregon Walks in the Getting Around on Foot plan.

Game changing projects, such as this bridge crossing on the East Bank Esplanade in the City of Portland, provide a high return on investment. Thousands of people use the crossing to access jobs, education, shopping and services on both sides of the river.

ATP Project List

The pedestrian and bicycle routes (on-street and trail) and districts that make up the regional active transportation network are provided as a list of projects Appendix 1. Entire routes and districts are identified as individual projects with the idea that seamless corridors and complete districts are needed to support fully functioning pedestrian and bicycle transportation networks.

Projects already listed in the 2035 Regional Transportation Plan, and that help complete regional pedestrian and bicycle routes, are identified on the ATP project list. Some routes and districts already have 2035 Regional Transportation Plan projects associated with them, some do not and some have 2035 Regional Transportation Plan projects that complete parts of the route or district. The project list is provided as a tool to frame how projects are defined and pursued in the region. It is intended to be flexible.

CHAPTER 16: PLANNING PROCESS AND STAKEHOLDER ENGAGEMENT

The impetus to develop a regional active transportation plan is the outcome of the adopted 2035 Regional Transportation Plan and The Intertwine Alliance initiative, which started as Connecting Green. The need to better integrate walking and bicycling projects into the Regional Transportation Plan was a recommendation of the Metro Blue Ribbon Committee for Trails in 2009.¹⁰² The Blue Ribbon Committee recommended that development of the regional trails system should be accelerated, and that it must be done as part of a larger strategy to support active transportation – including well integrated and mutually supportive regional bicycle, pedestrian and transit networks. Development of a regional active transportation plan was identified as a follow up implementation activity in the 2035 Regional Transportation Plan.¹⁰³

Planning process

Development of the ATP was guided by a Stakeholder Advisory Committee composed of staff from jurisdictions and agencies, advocates and citizens, and with input from stakeholder groups, the Executive Council for Active Transportation, the public, Metro’s advisory committees and the Metro Council. The plan was developed between January 2012 and June 2013.

Committee and Stakeholder Engagement

- The **Metro Council** is the region’s directly elected governing body, consisting of a Council President and six district representatives. The Metro Council will vote to adopt the ATP and amend it to the 2035 Regional Transportation Plan during the update of the Regional Transportation Plan in 2014.
- The **Joint Policy Advisory Committee on Transportation (JPACT)** is a committee of elected officials and representatives of agencies involved in transportation related needs for the region. All transportation related actions (including federal MPO actions) are recommended by JPACT to the Metro council. The Metro Council can approve the recommendations or refer them back to JPACT with a specific

¹⁰² “The Case for an Integrated Mobility Strategy: Walking and Bicycling Offer an Immediate Opportunity to Tackle Key Challenges” (2009), The Blue Ribbon Committee for Trails final report

¹⁰³ Chapter 6.

concern for reconsideration. Final approval of each item, therefore, requires the concurrence of both bodies. As a component of the Regional Transportation Plan, the ATP must be approved by both JPACT and MPAC before implementation. A

- The **Metro Policy Advisory Committee (MPAC)** is a charter mandated committee of local government representatives and citizens. Under state law, the Regional Transportation Plan serves as the region’s transportation system plan. As a result, MPAC also has a role in approving the regional transportation plan, and thus the ATP, as a land use action, consistent with statewide planning goals and the Metro Charter.
- The **Transportation Policy Alternatives Committee (TPAC)** provides technical input to JPACT and transportation planning and funding priorities for the region. TPAC will receive updates and provide input on the development of the ATP.
- The **Metro Technical Advisory Committee (MTAC)** is composed of planners, citizens and business representatives and provides detailed technical support to MPAC. MTAC will receive updates and provide input on the development of the ATP.
- The **Project Team** is composed of Metro staff and consultant and developed the work products and data.
- The **Project Stakeholder Advisory Committee (SAC) and sub-committees** provided technical and policy guidance for the project and developed recommendations. The SAC membership includes bicycle, pedestrian, trail and transit planners and advocates, and representatives of elders, youth, and health.
- The **Executive Council for Active Transportation (ECAT)** provided high level guidance in the early stages of the project. ECAT was initially formed to support the development of a regional active transportation network through the Intertwine initiative.
- **Stakeholder groups** (listed below) provided input at staff presentations on the project.
- The **Public** provided valuable input at a public open house on May 23, 2013. Additionally, metro conducted an Active Transportation Opt-In poll at the start of the project and received responses from nearly 4,000 residents. The results of the poll were used to develop the workplan for the project. Materials and information on the project were provided on the public webpage.

Committees and Stakeholders

Appendix 1: Regional Active Transportation Plan Project List - DRAFT

| ATP ID # | RTP System Map | County | Jurisdiction | Project | Extent From | Extent To | Proposed RTP Designation | Related RTP proj. # | Recommended additions to project list |
|----------|----------------|------------------------------------|--|--|--|--------------------------------------|--------------------------|----------------------------|---|
| B1 | Bike | Washington County | Washington County | Jackson School Road | Evergreen | Council Creek Trail/TV Hwy | Bicycle Parkway | 10826 | Roadway will be improved in next five years; consider adding bike/ped project to road project. |
| B2 | Bike | Washington County | Washington County | NW Evergreen | NE Jackson School Rd. | NW Cornell Road | Bicycle Parkway | 10597, 10814 | Consider adding bikeway project |
| B3 | Bike | Washington County | Cornelius, Hillsboro, Beaverton, Aloha | Tualatin Valley Hwy | Council Creek Trail (TV Hwy Trail) connection at S 1st Ave | Westside Trail | Bicycle Parkway | 10846 | RTP project covers Hillsboro section, new project(s) needed to address continuous bicycle parkway connecting jurisdictions |
| B4 | Bike | Washington County | Hillsboro | NE Grant/NE Veterans | NE Jackson School Rd. | Brookwood | Bicycle Parkway | 10833 | RTP project to construct new road connecting to Brookwood. Project for upgrading Grant needed. |
| B5 | Bike | Washington County | Washington County | NW Walker | Amberglen | SW Canyon Road | Bicycle Parkway | 11233, 11235 | RTP projects widens Walker from two to five lanes with bike lanes from 185th to Hwy 217. Update project to include bicycle parkway. |
| B6 | Bike | Washington County | Hillsboro | Brookwood | Evergreen | Rock Creek Trail | Bicycle Parkway | 11140 | RTP project includes parallel bicycle path. Extend project to include extent of Parkway. |
| B7 | Bike | Washington County | Beaverton | NW Cornell/SW Barnes | Evergreen | Hwy 26 Multi Use Path connection | Bicycle Parkway | 10559 | RTP: widen to 5 lanes from Murray to Hwy 26 |
| B8 | Bike | Washington County | Beaverton | SW Cedar Hills Blvd. | SW Barnes | Walker | Bicycle Parkway | 10634 | RTP project from Farmington to Walker |
| B9 | Bike | Washington County | Beaverton | Beaverton Hillsdale Hwy | Hocken | Scholls Ferry Road | Bicycle Parkway | No | RTP projects cover Portland segments. Project(s) needed for rest of corridor |
| B10 | Bike | Washington County | Beaverton | SW Hall Blvd | SW Broadway | Fanno Creek Trail, south of Hunziker | Bicycle Parkway | 10619, 11220 | Critical on road section of the Crescent Connection. 10619: Crescent extension |
| B11 | Bike | Washington County | Beaverton | SW Greenway/SW Brockman/SW Beard/SW Nora | Hall Blvd /Fanno Creek Trail | Westside Trail | Bicycle Parkway | 10654 | Nora project for sidewalks and bikelanes; existng bikelanes on Broackman and Beard |
| B12 | Bike | Washington County | Beaverton/Portland | Scholls Ferry Rd. | Tile Flat | Hall Blvd. | Bicycle Parkway | 11213 | Need project from Westside trail to Tile Flat. Upgrade existing bike lanes from Hall to Westside Trail; 11213:Bridge crossing of Scholls Ferry Road by the Westside Trail. |
| B13 | Bike | Washington County/Multnomah County | Portland/Multnomah County | Multnomah Blvd./SW Garden Home | SW Oleson | SW Barbur | Bicycle Parkway | 11351 | Upgrade existng bike lanes. 11351: Reconstruct street to urban standards, including curbs, sidewalks, storm sewers and upgraded street lights, Barbur to 45th Ave. |
| B14 | Bike | Washington County/Multnomah County | ODOT | Barbur Blvd. (99 W) | Portland | Tonquin Trail in Sherwood | Bicycle Parkway | 10283, 11205, 10282, 11324 | <u>Upgrade existng bike lanes, complete bridges.</u> 10283: Construct Improvements for transit, bikes and pedestrians. Transit improvements include preferential signals, pullouts, shelters, left turn lanes and sidewalks. SW 3rd-Terwilliger. 11205: SW Portland sidewalk infill includes Barbur; 10282: Construct safety improvements, including traffic signals, at the intersection of Capitol Hwy, Taylors Ferry, Huber, and Barbur. Provide better sidewalks and crossings. 11324: Barbur Bridges |
| B15 | Bike | Washington County/Multnomah County | Portland/Beaverton | SW Scholls Ferry Road/SW Oleson Rd | Schools Ferry from Hwy 26 to BH Hwy | SW Oleson from BH Hwy to Hall Blvd. | Bicycle Parkway | 10188 | Need project from County line to Beaverton Hillsdale Hwy. Bike lanes on Schools Ferry from Hwy 26 to Sheridan. 10188: Humphrey to County line, multimodal improvements. Upgrade existing bike lanes on SW Oleson from Hall to BH Hwy |
| B16 | Bike | Multnomah | Portland | Downtown Portland Parkways | | | Bicycle Parkway | 10232 | 10232:Flanders, NW (Steel Bridge to Westover): Bicycle Facility. |

Appendix 2: Planning Level Cost Estimate Assumptions for the Active Transportation Plan

Planning level cost estimates for developing the regional pedestrian and bicycle networks were developed for the Regional Active Transportation Plan (ATP). The ATP identifies the recommended regional active transportation network. This network is integrated with public transit and is comprised of bicycle and pedestrian parkways, regional bikeways and regional pedestrian corridors, and pedestrian and bicycle districts. The planning level cost estimates can be used to develop funding and implementation strategies, providing a very general idea of the costs of completing and extending the planned network.

1. Costs are in 2012 dollars for consistency with the update of the Regional Transportation Plan.
2. Costs identified in Table 1, below, assume the highest level of design feasible to provide for a fully functioning, safe and comfortable bicycle and pedestrian parkway. Elements such as landscaping (e.g. trees in sidewalk buffer or along trails), lighting, bicycle parking staples, wayfinding, benches, etc. that contribute to complete bicycle and pedestrian routes could be accommodated in the planning level costs in many cases.
3. Cost assumptions include construction, design, engineering and contingency, and costs are federalized, that is, additional administrative costs incurred by federally funded projects are included in the assumption.
4. Cost assumptions do not include acquisition of right of way, drainage/stormwater management, maintenance, or education or programs.

Table 1. Planning Level Federalized Capital Cost Assumptions *

| Improvement | Cost per mile, 2012\$ | Costs can include |
|--|--------------------------|--|
| New 8-10' sidewalk and 7' buffer (parking or planter strip) | \$2 million/side | Sidewalk and parking or planter strip buffer, grading, a few sections with walls, landscaping, wayfinding, signage, seating. Drainage/stormwater management system already in place. |
| Upgrade existing sidewalk to 8-10' sidewalk and 7' buffer (parking or planter strip) | \$1 million/side | Sidewalk upgrade and addition of parking or planter strip buffer if needed, grading, a few sections with walls, landscaping, wayfinding, signage, seating. Drainage/stormwater management system already in place. |
| New 12' regional trail | \$3 million | Trail, intersection crossings, mitigation, access points, bridge crossings, trailheads, signage and lighting. Assumes some ROW may be needed. |
| Upgrade existing trail in 2035 network to 12-14', | \$1.5 million | Widen existing trails 4' from 8' to 12' or 10' to 14', repave if needed, lighting, signage, intersection crossings, improved access points. |
| New bicycle boulevard | \$250,000 | Signage, markings, speed humps, traffic diversion, crossing elements, lighting, bicycle parking and any other elements to develop a complete bicycle boulevard. |
| Upgrade existing bicycle boulevard | \$100,000 | Improve crossings, add signage, fix identified, deficiencies, etc. |

| Improvement | Cost per mile, 2012\$ | Costs can include |
|--|---|--|
| New or upgraded separated 8-10' in-roadway bikeway | \$1 million/side | Costs include signal timing, lane reconfigurations, striping, signage, bicycle parking, lighting, raised curbs, no drainage needed. |
| Improved or new crossings | \$80,000/crossing of five lane arterial | Costs are for a typical 4-5 lane arterial, includes treatments such as rapid flash beacons, curb ramps, median island, signage, lighting striping. |

*Cost assumptions do not include acquisition of right-of-way

Included in Sidewalk Cost Assumption

Proposed sidewalk widths are consistent with guidelines for regional and community boulevards and streets described in Metro's "Creating Livable Streets – Street Design Guidelines" (2002). The per mile unit cost was developed by Metro based on the costs included in the table below to provide a general federalized capital cost that assumes no acquisition of right-of-way and no drainage required. Elements such as seating, signage, lighting and landscaping are not broken out, but could be accommodated in the cost/mile estimate for many projects.

Table 2: Sidewalk Costs

| | |
|-----------------------------|----------------------|
| New 8-10' sidewalk, no curb | 10.00/SF 60.00/LF |
| New curb | 16.00/LF |
| Grading | 17.50/CY |
| Retaining Wall | 250.00/LF |
| Surveying, Design | 30% |
| Construction Engineering | 20% |
| Administration | 35% |
| Contingency | 20% |

Included in Trail Cost Opinion

Planning level per mile unit costs for trails are an average per mile cost of twenty trails in the Portland region developed by Alta Planning and Design and described in the 2009 report "Connecting Green Trails, Cost Estimates, Benefits and State of Development for Twenty Regional Trails". The report estimated 229 miles of trail gaps for the twenty trails. The cost opinion for capital was estimated at \$518,140,636. The federalized cost opinion estimate was \$673,585, 827. The cost opinion for acquisition was \$507,414,959. The cost opinion for administrative costs was \$7,535,000. Using the federalized cost opinion plus the administrative cost opinion divided by the 229 miles of trail gaps Metro developed a per mile cost opinion of \$3,000,000 for federalized capital costs. The following table provides the costs Alta Planning and Design used to determine the cost estimates for the twenty trails. Elements such as seating, signage, lighting and landscaping are not broken out, but could be accommodated in the cost/mile estimate for many projects.

Table 3. Regional Trail Costs

| | |
|--------------------------------|---------------|
| 12' Trail common condition | 39.75/LF |
| Add for difficult soils | 23.00/LF |
| Add for 4' fill | 20.71/LF |
| Add for 4' cut | 37.68/LF |
| Add for parallel to stream | 99.90/LF |
| Add for wetland mitigation | 262.50/LF |
| 12'wide boardwalk | 600.00/LF |
| 14" wide bridge | 3,500.00/LF |
| Intersection | 8,760.00 EA |
| Signalized intersection | 131,760.00 EA |
| Trailhead | 78,267.60 EA |
| High visibility crosswalk | 3,000.00 EA |
| Contingency: concept alignment | 40% |
| Contingency: master planned | 35% |

Alta Planning and Design, 2009

Table 4. Cost Opinion Summary, Twenty Regional Trails

| | |
|---------------------------------------|---------------|
| Total gap length | 229 |
| Capital cost opinion | \$518,140,636 |
| Federalized cost opinion | \$673,582,827 |
| Cost opinion for acquisition | \$507,414,959 |
| Cost opinion for administrative costs | \$7,535,000 |

Alta Planning and Design, 2009

Included in bikeway costs

Costs for bicycle boulevards and separated in-roadway bikeways are based on per mile project cost estimates used in the *Portland Bicycle Plan for 2030*, costs (Chapter 5 and Appendix A) and a report developed by the Initiative for Bicycle and Pedestrian Innovation (IBPI) *Draft Report - Cost Analysis of Bicycle Facilities*, (November 2011). The table below provides examples of the range of costs for bicycle boulevards and cycle tracks. Portland has developed the most bicycle boulevards in the region. Costs range from \$70,000/ mile to 200,000/mile. In planning for new cycle track facilities the City or Portland is using an estimate of \$275/FT or \$1.5M/mile. Elements such as signage,

lighting, bicycle parking and landscaping are not broken out, but could be accommodated in the cost/mile estimate for many projects.

Table 5. Cost examples, Bicycle Boulevards and Cycle tracks in Portland

| | | | |
|--|---|--|---|
| Bicycle Boulevard - include signage, street markings, speed humps, traffic circles, bike boxes, intersection crossings | North Concord Neighborhood Greenway, Portland - Total cost approx \$184,000 total cost, \$73,600/mile | North 80s Greenway, Portland. Total cost approx \$520,000, \$200,000/mile. | SE Center-Gladstone Neighborhood Greenway, Portland. Total cost \$300,000, \$168,000/mile. |
| Cycle tracks | Street level cycle track \$132,000/mile. Broadway cycle track 1,800 feet, \$44,623 or \$25/ft. | Raised concrete two way cycle track \$698/foot, \$3.6M/mile (Portland) | Raised cycle track, \$275/foot, \$1.5M/mile (Portland) Cully Cycle Track, (\$360,000/mile)Portland |

Initiative for Bicycle and Pedestrian Innovation – IBPI, *Draft Report - Cost Analysis of Bicycle Facilities*, (November 2011)

Table 6. Raised Concrete Cycle Track Costs

| | |
|---|----------|
| 2-way raised concrete cycle track, construction | 93.00/LF |
| Project management | 23.00/LF |
| Engineering | 23.00/LF |
| Administration/overhead | 78.00/LF |
| Contingency | 58.00/LF |

Cost assumptions do not include right-of-way

- Comprehensive regional data for existing right-of-way does not exist. Metro has developed a polygon shapefile showing all right-of-way in the region (approximately 16% of all land), but that data is not yet available by street or trail segment. Local right-of-way data is in varying formats and is not easily combined into a regional data set.
- Metro has some data providing a unit cost for ROW acquisition for trail corridors, developed for 20 trail projects in the region. However recent experience with acquisition has shown those unit cost estimates are probably too high and should not be used.
- Metro investigated developing a unit cost per mile for right-of-way acquisition for on-street bikeways. However, right-of-way acquisition costs vary widely depending on the value of the land and seller willingness. Developing a standard cost for ROW acquisition for the region is therefore unrealistic.
- There are very few instances, if any, in the U.S. where a DOT has acquired ROW solely for a bikeway project, such as a cycletrack. Acquiring ROW for sidewalk expansion is also rare. In instances where bicycle and pedestrian projects are developed on new ROW, the ROW was acquired to expand capacity for autos. It is safe to assume that this trend will continue and that the addition of separated on-street bikeways and sidewalk expansions will, in most circumstances, need to be accommodated in existing ROW through roadway reconfigurations or as part of larger roadway projects.

Table 7, below, provides planning level cost estimates for the regional active transportation network, based on the assumptions described above. The estimates are provided only for discussion and planning purposes

Table 7: Planning Level Cost Estimates for the Regional Active Transportation Network

| Projects | Cost per mile | Miles | Cost |
|-------------------------------------|----------------------|--------------|------------------------|
| New bicycle blvd. | \$250,000 | 5 | \$1,208,750 |
| Improved bicycle blvd. | \$100,000 | 16 | \$1,561,500 |
| New trail | \$3,000,000 | 35 | \$105,645,000 |
| Improved trail | \$1,500,000 | 98 | \$146,302,500 |
| New separated in roadway | \$2,000,000 | 11 | \$22,900,000 |
| Improved separated in roadway | \$2,000,000 | 150 | \$299,400,000 |
| Sidewalk gaps | \$2,000,000 | 648 | \$1,296,000,000 |
| Number of improved crossings | \$80,000/crossing | 1551 | \$124,080,000 |
| Total new and upgraded ATP projects | | | \$1,997,097,750 |
| Total cost of new ATP facilities | | | \$1,549,833,750 |
| Total cost of upgraded facilities | | | \$447,264,000 |
| Total | | | \$1,997,097,750 |
| 2035 RTP bike, ped, trail projects | | | \$1,283,000,000 |
| Total | | | \$3,280,097,750 |

APPENDIX 4: SELECTED GLOSSARY OF TERMS

The Regional Transportation Plan includes a comprehensive glossary of terms related to regional transportation planning. Selected terms from the 2035 Regional Transportation Plan glossary in addition to new terms are included below. Terms not included in the current Regional Transportation Plan glossary are identified with an asterisk (*).

***Active transportation** - Non-motorized forms of transportation including walking and biking, people using wheelchairs or mobility devices and skateboarding. Transit is considered part of active transportation because most transit trips start with a walking or bicycle trip.

*** Active transportation network** – combined network of streets, trails and districts identified on the regional transportation pedestrian and bicycle network maps and identified as Pedestrian and Bicycle Parkways, Regional Bikeways, Regional Pedestrian Corridors and Regional Pedestrian and Bicycle Districts, which include station communities. The active transportation network also includes frequent bus routes, all of which are designated as Pedestrian Parkways, and high ridership bus stops.

***Arterial traffic calming** - Designed to manage traffic at higher speeds and volumes, but still minimize speeding and unsafe speeds. Treatments can include raised medians, raised intersections, gateway treatments, textured intersections, refuge islands, road diets, and roundabouts.

Bicycle boulevards - Sometimes called a bicycle priority street, a bicycle boulevard is a low-traffic street where all types of vehicles are allowed, but the street is modified as needed to enhance bicycle safety and convenience by providing direct routes that allow free-flow travel for bicyclists at intersections where possible. Traffic controls are used at major intersections to help bicyclists cross streets. Typically these modifications also calm traffic and improve pedestrian safety.

***Bicycle District** - an area with a concentration of transit, commercial, cultural, institutional and/or recreational destinations where bicycle travel is attractive, comfortable and safe. Bicycle Districts are areas where high levels of bicycle use exist or a planned. Within a Bicycle District, some routes may be designated as Bicycle Parkways or Regional Bikeways, however all routes within the Bicycle District are considered regional. A new concept for the Regional Transportation Plan and added to the regional bicycle network through the ATP. The Central City, Regional and Town Centers and Station Communities are identified as Bicycle Districts.

Bicycle facilities – A general term denoting improvements and provisions made to accommodate or encourage bicycling, including parking facilities, all bikeways and shared roadways not specifically designated for bicycle use.

***Bicycle Routes** –Link bicycle facilities together into a clear, easy to follow route using wayfinding such as signs and pavement markings, connecting major destinations such as town centers, neighborhoods and regional destinations.

***Bicycle Parkway** - A bicycle route designed to serve as a bicycle highway providing for direct and efficient travel for large volumes of cyclists with minimal delays in different urban and suburban

environments and to destinations outside the region. These bikeways connect 2040 activity centers, downtowns, institutions and greenspaces within the urban area. The specific design of a bike parkway will vary depending on the land use context within which it passes through. These bikeways could be designed as an off-street trail along a stream or rail corridor, a cycletrack along a main street or town center, or a bicycle boulevard through a residential neighborhood.

***Bikeable** - A place where people live within biking distance to most places they want to visit, whether it is school, work, a grocery store, a park, church, etc. and where it is easy and comfortable to bike.

Bike lane – A portion of a roadway that has been designated by striping, signing and pavement markings for the preferential or exclusive use of bicyclists.

Bike-transit facilities - Infrastructure that provide connections between the two modes, by creating a “bicycle park-and-ride,” i.e. large-scale bike parking facility at a transit station.

***Bikeway** – Any road, street, path or right-of-way that is specifically designated in some manner as being open to bicycle travel, either for the exclusive use of bicycles or shared use with other vehicles or pedestrians.

***Cycletrack** – Bicycle lanes that are physically separated from motor vehicle and pedestrian travel.

***Cyclist** – person riding a bicycle

Essential Destinations – in the 2035 Regional Transportation Plan defined as: hospitals and medical centers, major retail sites, grocery stores, elementary, middle and high schools, pharmacies, parks/open spaces, major social service centers (with more than 200 monthly LIFT pick up counts), colleges and universities, employers with greater than 1,500 employees, sports and attraction sites and major government sites.

Equity – In transportation, a normative measure of fairness among transportation system users.

Frequent bus – Frequent bus service offers local and regional bus service with stops approximately every 750 to 1000 feet, providing corridor service rather than nodal service along selected arterial streets. This service typically runs at least every 15 minutes throughout the day and on weekends though frequencies may increase based on demand, and it can include transit preferential treatments, such as reserved bus lanes and transit signal priority, and enhanced passenger infrastructure along the corridor and at major bus stops, such as covered bus shelters, curb extensions, special lighting and median stations.

Gap - Missing links or barriers in the “typical” urban transportation system for any mode that functionally prohibits travel where a connection might be expected to occur. A gap generally means a connection does not exist at all, but could also be the result of a physical barrier such as a throughway, natural feature, weight limitations on a bridge (e.g., Sellwood Bridge), or existing development.

***Greenways** - Greenways generally follow rivers and streams and may or may not provide for public access. In some cases, greenways may be a swath of protected habitat along a stream with no public access. In other cases, greenways may allow for an environmentally compatible trail, viewpoint or canoe launch site. The greenways that are identified in Metro's regional trails plan do not presently offer public access. Usage of the term "greenway" can be ambiguous because it is sometimes used interchangeably with the word "trail." For example, "Fanno Creek Trail", "Fanno Creek Greenway", and "Fanno Creek Greenway Trail" are used with equal frequency. Trail and greenway professionals prefer to make the technical distinction that the "trail" refers to the tread or the actual walking service, while the "greenway" refers to the surrounding park or natural corridor. The term is also ambiguous because the City of Portland recently began referring to its bicycle boulevards as "neighborhood greenways." Neighborhood greenways differ from traditional greenways in that they generally do not follow an open space corridor aside from local streets.

Local Bikeways - Trails, streets and connections not identified as regional bicycle routes, but are important to a fully functioning network. Local bikeways are the local collectors of bicycle travel. They are typically shorter routes with less bicycle demand and use. They provide for door-to-door bicycle travel.

Local Pedestrian Connectors – All streets and trails not included on the regional network. Local connectors experience lower volumes of pedestrian activity and are typically on residential and low-volume/speed roadways or smaller trails. Connectors, however, are an important element of the regional pedestrian network because they allow for door-to-door pedestrian travel.

Mobility corridor – Mobility corridors represent sub-areas of the region and include all regional transportation facilities within the subarea as well as the land uses served by the regional transportation system. This includes freeways and highways and parallel networks of arterial streets, regional bicycle parkways, high capacity transit, and frequent bus routes. The function of this network of integrated transportation corridors is metropolitan mobility – moving people and goods between different parts of the region and, in some corridors, connecting the region with the rest of the state and beyond. This framework emphasizes the integration of land use and transportation in determining regional system needs, functions, desired outcomes, performance measures, and investment strategies.

Modal targets – Targets for increased walking, biking, transit, shared ride and other non-drive alone trips as percentages of all trips. The targets apply to trips to, from and within each 2040 Design Type. The targets reflect mode shares for the year 2040 needed to comply with Oregon Transportation Planning Rule objectives to reduce reliance on single-occupancy vehicles.

Mode – A type of transportation distinguished by means used (e.g., such as walking, bike, bus, single- or high-occupancy vehicle, bus, train, truck, air, marine).

Mode choice – The ability to choose one or more modes of transportation.

Mode split – The proportion of total person trips using various modes of transportation.

Multi-modal – The movement of people or goods by more than one mode.

***Multi-modal level of service** - Multimodal level of service (MMLOS) is an analytical tool that measures and rates users' experiences of the transportation system according to their mode. It evaluates not only drivers' experiences, but incorporates the experiences of all other users, such as cyclists and pedestrians.

***Network** – Connected routes forming a cohesive system.

Non-motorized - Generally referring to bicycle, walking and other modes of transportation not involving a motor vehicle.

Pedestrian – A person on foot, in a wheelchair or in another health-related mobility device.

Pedestrian connection – A continuous, unobstructed, reasonably direct route between two points that is intended and suitable for pedestrian use. Pedestrian connections include but are not limited to sidewalks, walkways, accessways, stairways and pedestrian bridges. On developed parcels, pedestrian connections are generally hard surfaced. In parks and natural areas, pedestrian connections may be soft-surfaced pathways. On undeveloped parcels and parcels intended for redevelopment, pedestrian connections may also include rights-of-way or easements for future pedestrian improvements.

Pedestrian Corridor - the second highest functional class of the regional pedestrian network. On-street Regional Pedestrian Corridors are any major or minor arterial on the regional urban arterial network that is not a Pedestrian Parkway. Regional trails that are not Pedestrian Parkways are Regional Pedestrian Corridors. These routes are also expected to see a high level of pedestrian activity, though not as high as the Parkways.

Pedestrian district – A comprehensive plan designation or set of land use regulations designed to provide safe and convenient pedestrian circulation, with a mix of uses, density, and design that support high levels of pedestrian activity and transit use. The pedestrian district can be a concentrated area of pedestrian activity or a corridor. Pedestrian districts can be designated within the following 2040 Design Types: Central City, Regional and Town Centers, Corridors and Main Streets. Though focused on providing a safe and convenient walking environment, pedestrian districts also integrate efficient use of several modes within one area, e.g., auto, transit, and bike.

Pedestrian facility – A facility provided for the benefit of pedestrian travel, including walkways, crosswalks, plazas, signs, signals, illumination and benches.

*** Pedestrian Parkway** – are a new functional class for pedestrian routes in the Regional Transportation Plan and the highest functional class. They are high quality and high priority routes for pedestrian activity. Pedestrian Parkways are major urban streets that provide frequent and almost frequent transit service (existing and planned) or regional trails. Adequate width and separation between pedestrians and bicyclists should be provided on shared use path parkways.

Pedestrian-scale – An urban development pattern where walking is a safe, convenient and interesting travel mode. The following are examples of pedestrian scale facilities: continuous, smooth and wide walking surfaces, easily visible from streets and buildings and safe for walking; minimal points where high speed automobile traffic and pedestrians mix; frequent crossings; and storefronts, trees, bollards, on-street parking, awnings, outdoor seating, signs, doorways and lighting designed to serve those on foot; all well-integrated into the transit system and having uses that cater to pedestrians.

Performance measures – Also called indicators. A measure of how well the transportation system is performing that is used to evaluate the success of the objective with quantitative or qualitative data and provide feedback in the plan’s decision-making process. Some measures can be used to predict the future as part of an evaluation process using forecasted data, while other measures can be used to monitor changes based on actual empirical or observed data. In both cases, they can be applied at a system-level, corridor-level and/or project level, and provide the planning process with a basis for evaluating alternatives and making decisions on future transportation investments. They can also be used to monitor performance of the plan in between updates to evaluate the need for refinements to policies, investment strategies or other elements of the plan.

Regional Bike-Transit Facility - the hub where the spokes of the regional bikeway network connect to the regional transit network. Stations and transit centers identified as regional bike-transit facilities have high-capacity bike parking and are suitable locations for bike-sharing and other activities that support bicycling. Criteria for identifying locations are found in the TriMet Bicycle Parking Guidelines.

***Regional bikeway** (updated from current RTP definition) – Designated routes that provide access to and within the central city, regional centers and town centers. These bikeways are typically located on arterial streets but may also be located on collectors or other low-volume streets. These bikeways should be designed using a flexible “toolbox” of bikeway designs, including bike lanes, cycle tracks (physically separated bicycle lanes) shoulder bikeways, shared roadway/wide outside lanes and bicycle priority treatments (e.g. bicycle boulevards).

***Regional destinations** –include the following types of destinations: employment sites with 300 or more employees (includes regional sports and attraction sites such as Oregon Zoo, OMSI, Jen Weld, Rose Stadium); high ridership bus stop locations; regional shopping centers; Major hospitals and medical centers; Colleges, universities and public high schools; Regional parks; major government centers; Social services; Airports; and Libraries.

Regional multi-use trails with transportation function – Paved, off-street facilities connections that accommodate pedestrian and bicycle travel and meet the requirements of the Americans with Disabilities Act. These connections are likely to be used by people walking or bicycling to work or school, to access transit or to travel to a store, library or other local destination. Regional multi-use trails that support both utilitarian and recreational functions are included as part of the regional transportation system. These trails are generally located near or in residential areas or near mixed-use centers. Bicycle/pedestrian sidewalks on bridges are also included in this definition. Multi-use trails are physically

separated from motor vehicle traffic by open space or a barrier. Bicyclists, pedestrians, joggers, skaters and other non-motorized travelers use these facilities.

***Regional Trails** - Regional Trails are defined by Metro as linear facilities for non-motorized users that are mostly off-street and are regionally significant. The term “non-motorized” is used instead of “multi-use” or “multi-modal” because some pedestrian-only trails are considered regional trails, though most regional trails allow bikes and/or horses. “Regionally significant” typically means that a trail is long enough to pass through more than one city. While some definitions state that regional trails are paved with either asphalt or concrete, Metro’s definition intentionally omits any mention of trail surface material out of consideration for sensitive habitat areas where natural surfaces may be more appropriate. Colloquially, terms like “bike path” and “multi-use path” are often used interchangeably with “regional trail”, except when referring to pedestrian-only regional trails.

Regional transit system - The regional transit system includes light rail, commuter rail, bus rapid transit, frequent bus, regional bus, and streetcar modes.

Regional Transportation Functional Plan – A regional functional plan regulating transportation in the Metro region, as mandated by Metro’s Regional Framework Plan. The plan directs local plan implementation of the Regional Transportation Plan.

Regional transportation plan (RTP) - The official multimodal transportation plan that is developed and adopted through the metropolitan transportation planning process for the Portland metropolitan region.

Regional transportation system – The regional transportation system is identified on the regional transportation system map(s) in Chapter 2. The system is limited to facilities of regional significance generally including regional arterials and throughways, high capacity transit and regional transit systems, regional multi-use trails with a transportation function, bicycle and pedestrian facilities that are located on or connect directly to other elements of the regional transportation system, air and marine terminals, as well as regional pipeline and rail systems.

***Short trip** – In the Regional Active Transportation Plan, generally defined as a one-way trip less than three miles.

Sidewalk – A walkway separated from the roadway with a curb, constructed of a durable, hard and smooth surface, designed for preferential or exclusive use by pedestrians.

Stakeholders – Individuals and organizations with an interest in or who are affected by the transportation planning process, including federal, state, regional and local officials and jurisdictions, institutions, community groups, transit operators, freight companies, shippers, the general public, and people who have traditionally been underrepresented.

Station Communities - Areas generally within a 1/4- to 1/2-mile radius of a light rail station or other high capacity transit stops that are planned as multi-modal, mixed-use communities with substantial pedestrian and transit-supportive design characteristics and improvements.

Traffic calming – A transportation system management technique that aims to prevent inappropriate through-traffic and reduce motor vehicle travel speeds on a particular roadway. Traditionally, traffic calming strategies provide speed bumps, curb extensions, planted median strips or rounds and narrowed travel lanes.

Transportation disadvantaged/persons potentially underserved by the transportation system – Individuals who have difficulty in obtaining important transportation services because of their age, income, physical or mental disability.

Transportation management associations (TMA) – Formally designated non-profit coalitions of local businesses and/or public agencies dedicated to reducing traffic congestion and pollution and improving commuting options for employees.

Travel options/choices– The ability range of travel mode choices available, including motor vehicle, walking, bicycling, riding transit and carpooling. Telecommuting is sometimes considered a travel option because it replaces a commute trip with a trip not taken.

***Underserved communities** – Populations that have historically experienced a lack of consideration in the planning and decision making process. It describes communities of concern that are not specifically called out in the federal definition of Environmental Justice. These populations are the elderly, persons with disabilities, children and any other population of people whose needs may not have been full met in the planning process.

Walkable neighborhood - A place where people live within walking distance to most places they want to visit, whether it is school, work, a grocery store, a park, church, etc.

***Walk Score**- an online tool that produces a number between 0 and 100 that measures the walkability of any address. Similar tools for transit and bicycling - Transit Score and Bike Score.

Walkway – A hard-surfaced transportation facility designed and suitable for use by pedestrians, including persons using wheelchairs. Walkways include sidewalks, hard-surfaced portions of accessways, regional trails, paths and paved shoulders.

Clean air and clean water do not stop at city limits or county lines. Neither does the need for jobs, a thriving economy, and sustainable transportation and living choices for people and businesses in the region. Voters have asked Metro to help with the challenges and opportunities that affect the 25 cities and three counties in the Portland metropolitan area.

A regional approach simply makes sense when it comes to providing services, operating venues and making decisions about how the region grows. Metro works with communities to support a resilient economy, keep nature close by and respond to a changing climate. Together, we're making a great place, now and for generations to come.

Stay in touch with news, stories and things to do.

MAKING A GREAT PLACE

STAFF REPORT

IN CONSIDERATION OF RESOLUTION NO. 13- 4454, FOR THE PURPOSE OF ACKNOWLEDGING THE WORK COMPLETED TO DATE AND INITIATING FURTHER REVIEW OF THE REGIONAL ACTIVE TRANSPORTATION PLAN PRIOR TO ADOPTION AS A COMPONENT OF THE REGIONAL TRANSPORTATION PLAN

Date: September 12, 2013

Prepared by: Lake Strongheart McTighe
503-797-1660

BACKGROUND

The Metro Council has a long history of supporting and advancing active transportation through numerous policies, plans and projects including development of pedestrian and bicycle policies and networks in the Regional Transportation Plan, development of the Regional Trails and Greenways plan, development of bicycle modeling tools, transit corridor planning and project development, mapping and data development, sponsoring events and programs, projects funded through Regional Flexible Funds and leadership on climate change.

In partnership with key stakeholders and with the support of the Metro Council, Metro has completed a draft Regional Active Transportation Plan (“ATP”). The need for a regional ATP was identified as an implementation activity of the 2035 Regional Transportation Plan (“RTP”). The plan is intended to:

1. Provide the region with a strategy to support jurisdictions and agencies completing and expanding the identified regional pedestrian and bicycle networks integrated with transit.
2. Increase the competitiveness of jurisdictions and agencies for active transportation, sustainability and health related funding.
3. Provide the best available information and practices to support communities in achieving local aspirations, transportation plans, goals and targets and the region’s six desired outcomes.

The draft ATP includes the following elements to support achieving these outcomes:

- a vision for a complete transportation system that includes active transportation
- updates to the RTP regional bicycle and pedestrian network visions and concepts
- updates to the functional classifications of the RTP regional bicycle and pedestrian networks
- guiding principles for developing the active transportation network
- benefits of active transportation, including health, safety, environmental and economic
- findings and opportunities for moving forward
- evaluation of improvements to the pedestrian and bicycle networks identifying areas where improvements will increase access for the most people and for underserved populations
- modal targets and performance measures
- recommended design guidelines to make walking safer and more attractive
- recommended policies and implementing actions and a project list
- implementation and funding strategies

Technical development of the draft ATP was guided by a regional Stakeholder Advisory Committee over 18 months, 10 meetings and 6 workgroup meetings. Representatives on the committee included staff from each of the counties, Tualatin Hills Park and Recreation District, staff from the cities of Hillsboro, Portland, Gresham, and Forest Grove, ODOT and TriMet, and bicycle, pedestrian, health and elder advocacy groups. Additional guidance was provided by the Metro Council and the Executive Council for Active Transportation. Additionally, other stakeholder groups received presentations and information on

the project and provided input. Metro advisory committees, TPAC, MTAC, MPAC and JPACT received presentations at the start of the project including an overview of the workplan, the schedule ways to stay engaged in the project and were provided with three project update factsheets. A project webpage includes materials and meeting records. A public open house was held in May. Over 100 people attended. Presentations and a workshop were also conducted at the 2012 Oregon Active Transportation Summit, the Intertwine Alliance Summit and Quarterly Trails forums. Refer to Chapter 16 of the ATP for a list of stakeholders that were engaged in the project.

The draft ATP and several technical reports were completed in July 2013, satisfying the requirements of an ODOT Transportation Growth Management grant which provided funding for the project. A subsequent revised draft of the plan (attached as Exhibit A to the Resolution) was completed in August 2013. The revised draft includes changes in response to stakeholder comments. The majority of stakeholder comments fell into the following areas:

- How the ATP might inform future funding decisions, especially for Regional Flexible Funds.
- How the design guidelines will be used and if they will be required, and/or tied to funding.
- Potential impact of proposed ATP policies on local plans and projects, including impact to freight routes and wildlife habitat.
- How the proposed implementing actions of the recommended policies would be realized.
- When more requirements for increasing bicycle and pedestrian networks would be included in the RTP.
- Need for the plan to be implemented with local plans to achieve regional transportation goals.
- The need for more time and process for jurisdictions and agencies to review and refine the draft plan.

Most of the changes to the first draft of the ATP involved clarifying language to more clearly express the intent of the plan and refining the network maps. A track changes version of the ATP was made available to stakeholders and is available Metro's website on the ATP project page. The objectives and outcomes of the plan have not changed. A summary of the changes included in the revised draft ATP is provided in **Attachment 1**. Additionally, **Attachment 2** provides information on the relationship of the ATP to funding policies and priorities.

JPACT and MPAC direction to Metro Council

The version of Resolution No. 13- 4454 attached to this staff report was unanimously recommended for passage by the Metro Council by JPACT and MPAC. The resolution acknowledges work completed to date on the plan and initiates further review and refinement of the ATP through the update of the 2014 RTP. Members of JPACT and MPAC expressed appreciation for the changes reflected in the revised draft of the ATP and for the resources provided by the Metro Council to support further opportunities to refine the ATP and updates to the RTP .

Both MPAC and JPACT recommended that Metro form and staff a regional workgroup to guide the refinement of the draft ATP and the ATP updates to the RTP. Metro is able to provide the staff and resources for the workgroup using the funding provided by the Metro Council to support implementation of the ATP.

The Metro Council provided two years of funding (FY 2013-14 and 2014-15) to begin to implement the ATP through the update of the 2014 RTP and beyond (in Ordinance 13-1300A). **Attachment 3** provides a summary of activities identified to begin implementing the ATP. This funding allows staffing a regional workgroup. The regional workgroup will be open to members of the ATP Stakeholder Advisory Committee (the committee concluded meeting in July 2013), members of TPAC and MTAC, jurisdictions and agency staff, advocates and other interested stakeholders.

ANALYSIS/INFORMATION

1. **Known Opposition**

There is general support for the overall purpose, outcomes and objectives of the regional Active Transportation Plan. JPACT and MPAC voted unanimously to support Resolution No. 13- 4454, with acknowledgment that initial concerns, such as those outlined in a letter submitted by twenty-one of the region's Mayors, have been sufficiently addressed to move forward. Two formal letters of support for the ATP and Resolution No. 13- 4454 were submitted to the Metro Council, JPACT and MPAC from Oregon Walks and the Portland City Club Bicycle Transportation Advocacy and Awareness Committee.

2. **Legal Antecedents**

- *Resolution 08-3936* "For the Purpose of Establishing the Blue Ribbon Committee For Trails";
- *Ordinance 09-1209* "Amending the FY 2008-09 Budget and Appropriations Schedule Transferring for the Integrated Mobility Strategy, adding 1.0 fte";
- *Resolution 09-4099* "For the Purpose of Accepting the Draft 2035 Regional Transportation Plan"; "Ordinance No. 10-1241B "For the Purpose of Amending the 2035 Regional Transportation Plan (Federal Component) and the 2004 Regional Transportation Plan to Comply with Federal and State Law; to Add the Regional transportation Systems Management and Operations Action Plan, the Regional Freight Plan and the High Capacity Transit System Plan; To Amend the Regional Transportation Functional Plan and Add it to the Metro Code; To Amend the Regional Framework Plan; And to Amend the Urban Growth Management Functional Plan";
- *Resolution No. 11-4239* "For the Purpose of Supporting Development of a Regional Active Transportation Action Plan";
- *Ordinances - 13-1300A* "Adopting the Annual Budget For Fiscal Year FY2013-14, Making Appropriations, Levying Ad Valorem Taxes, and Authorizing an Interfund Loan".

3. **Anticipated Effects**

Initial anticipated effects of passing the resolution will be the update of the 2014 RTP with changes from the ATP and adoption of the ATP as a component of the Regional Transportation Plan in July 2014.

Longer term anticipated effects are greater competitiveness for funding and more efficient planning and project development as local plans are knitted together to complete and expand a comprehensive, cohesive and integrated regional active transportation network. As the network continues to expand and walking and bicycling in the region become safer, more comfortable and accessible positive effects on safety, health, the environment and the economy are also anticipated.

4. **Budget Impacts**

Budget was provided in the FY 2013-14 adopted budget to implement next steps identified in resolution. The ATP/RTP workgroup requested by MPAC and JPACT will be supported through this budget. There are no additional budget impacts.

RECOMMENDED ACTION

Staff recommends the Metro Council support this resolution.

Regional Active Transportation Plan

Summary of changes to July 2013 review draft

This document provides a summary of changes made to the July 2013 draft of the Regional Active Transportation Plan (“ATP”). Changes reflect input from stakeholders and primarily include clarifying language to make the intent of the plan clearer.

General

1. Edits for clarity, syntax errors
2. Citations added to provide reference
3. When available, data/context for cities and counties added to reflect differences across the region (e.g. levels of walking and bicycling are not the same in all areas)
4. Added section on the need for unique approaches for implementing the network for different communities in the region
5. Added references to SMART in addition to TriMet
6. Added selected glossary to appendix to provide definitions of new terms
7. Added list of local plans reviewed for development of the plan and networks
8. Removed supplemental reports from appendix – they are referenced and available on Metro’s webpage
9. Formatting/photos added changed in some places to accommodate new text

Networks

1. Added chapter summarizing modeling and GIS evaluation of pedestrian and bicycle networks that was used to help identify recommended updates to the regional pedestrian and bicycle networks
2. Provided more explanatory detail on bicycle and pedestrian network functional classifications
3. Changes to maps made based on input from jurisdictions and stakeholders including adding new routes, refining routes, removing pedestrian only trails from bike map
4. Maps edited for clarity, including color of routes (both bike and pedestrian routes are now green) (Map books - zooms of smaller areas of the region -are being created to aid in future review of the maps)
5. Edited overlap maps of freight and bike networks
6. Added overlap map of freight and pedestrian networks
7. Added overlap maps of sensitive/quality lands and riparian areas (Regional Conservation Strategy) and bike/ped networks

Design Guidelines

1. Added volume of heavy trucks to be considered for Design Type C routes (those pedestrian and bicycle routes that are high speed/traffic)
2. Added section on the need for interim/basic pedestrian and bike facility improvements when highest desired design is not feasible
3. Added additional language on need for protecting environment, avoiding sensitive habitat, and/or using environmentally sensitive design (whichever option is most appropriate)
4. Added language to emphasize guidelines are optional and are provided to encourage consistency of design across the region and best practices to attract people to walking and bicycling

Attachment 1

5. Added language on the need to consider context (including level of activity, land use, nearby destinations, level of transit service, traffic speed and volume) in determining the appropriate design for walkways and bikeways; e.g. design could change along regional pedestrian and bicycle routes and in districts as context changes

Policies and implementing actions

1. Edits for clarity
2. Language to emphasize that implementing actions are proposed and are not policies nor automatically implemented
3. Added additional action under policy 5 for using habitat, sensitive land, riparian and freight route data when planning and implementing routes
4. Added language to action item under Policy 2 to include conservation experts in trail planning

Performance targets

1. Recommend that additional performance measures be included in future ATPs, not in this update of the RTP
2. Added information on new performance management requirements under MAP-21

Funding

1. Clarified costs of network (section was confusing)
2. Added reference to value of bike and pedestrian projects funded through larger roadway projects

Implementation/projects

1. Added project areas (corridors, trails and districts) that rose to the top in evaluation for access and equity as examples of where access could be increased for the most people, highest volume of bicycle trips, and areas with underserved populations
2. Project list added as an attached appendix to the ATP; project list is still being developed. Staff will meet with jurisdictions, agencies and stakeholders to review list and highlight local priorities on the list.

Regional Active Transportation Plan

Relationship to funding policies and priorities

At the August 1 JPACT meeting additional information on the relationship of the Regional Active Transportation Plan (“ATP”) to long term funding policies was requested. Overall, the ATP is provided as a resource that could inform future funding policy discussions and decisions, along with other plans and strategies. The ATP does not mandate dedicating funding for projects.

- Long term regional funding policy is identified in the Regional Transportation Plan (“RTP”). The RTP describes which projects will be funded to complete the regional transportation network. Many of the projects needed to complete the ATP pedestrian and bicycle networks are already listed in the RTP. Additionally, the ATP is identifying gaps in the current RTP project list. This will be provided to local jurisdictions and agencies as a resource as they are developing updates to the RTP project list in the 2014 and future RTP updates.
- Funding priorities are mapped out through local Capital Improvement Plans, the Metropolitan Transportation Improvement Program (MTIP) and the State Transportation Improvement Program (STIP). The ATP does not identify projects for funding priorities, but does provide information and strategies, based on existing best practices and best available information, that can be used at the discretion of jurisdictions and agencies to develop funding priorities that respond to public desires, achieve transportation targets and goals, are cost effective, efficient and provide transportation choices.
- Funding policy for the Regional Flexible Fund Allocation (RFFA) by Metro as a part of the MTIP process is adopted by JPACT and the Metro Council. Information in the ATP can be used to inform the upcoming RFFA/MTIP policy discussion but the decision to guide federal investments toward Active Transportation Plan objectives is an MTIP/RFFA policy decision, not an ATP decision.
- The ATP provides the best available information and best practices in active transportation to support achieving community aspirations – the regional active transportation network is local networks connected together. The plan identifies high opportunity investment areas for projects, and funding and implementation strategies. This information is provided as a resource to communities to identify projects that provide a high return on investment as they implement their local plans (and thus, regional plans).
- By providing a vision of a comprehensive regional network comprised of linked local networks, the ATP improves the ability of jurisdictions and agencies to secure federal and state safety, transportation, health and sustainability related funding to implement projects identified in local and regional plans. The regional impact of connected, continuous local networks is highlighted in the plan making local jurisdictions, and hence the region, more competitive.

Regional Active Transportation Plan Implementation Activities

Background: The Metro Council provided two years of funding (FY 2013-14 and 2014-15) to begin to implement the Regional Active Transportation Plan (“ATP”) through the update of the 2014 Regional Transportation Plan (“RTP”) and beyond.

Scope & Timeline: The following ATP implementation activities and products are grouped under four major activity areas, with each area organized according to. These activities are proposed and could change.

- Activities in the 2014 Regional Transportation Plan update work program to be completed in 2013-14; these activities and products will be more fully accomplished with the additional funding.
- Additional activities and products that have been added to the work program for 2013-14 (year 1).
- Additional activities and products that have been added to the work program for 2014-15 (year 2).
- Identified activities not currently included in the work program.

| |
|--|
| <p>A. Incorporation of the ATP policies and projects into the Regional Transportation Plan and the Regional Transportation Functional Plan during the 2014 update and into other regional projects – “Adopt regionally”</p> |
|--|

Implementation activities included in the draft 2014 RTP work scope:

1. Local jurisdictions can add recommended ATP projects into the Regional Transportation Plan financially constrained or state project list.
2. Adopt updated pedestrian, bicycle and integrated active transportation maps, concepts, functional classes and design guidelines into the Regional Transportation Plan.
3. Incorporate language and policy changes into the Regional Transportation Plan.
4. Use regional pedestrian and bicycle networks in Climate Smart Communities Scenario C.
5. Integrate regional bicycle and pedestrian parkway projects and design guidelines into SW Corridor plan and utilize project priorities for Powell-Division Transit Project and Community Investment Initiative.
6. Local jurisdictions update TSPs with ATP recommendations.

Additional implementation activities proposed for Year 1:

1. Support local jurisdiction staff to add ATP recommended projects to the RTP and local project lists.
2. Communicate with Metro policy advisory committees, local elected officials, decision makers and other stakeholder groups and interested parties on the proposed changes and recommendations in the ATP, and importance of implementing the ATP and benefits of active transportation.
3. Begin to develop proposed policy/required action changes for the Regional Transportation Functional Plan, to be considered in the 2018 update of the RTP.

Implementation activities proposed for Year 2:

1. Refine existing RTP system performance measures and targets (such as a complete networks policy) to meet active transportation goals and new federal performance measure requirements. Develop a sustainable data management tool for periodic reporting on progress toward these targets.
2. Work on proposal for RTP project prioritization and submittal criteria, perhaps setting modal investment targets based on projects contribution to meeting the RTP non-sov modal targets.

B. Communicate, advocate, participate and facilitate the implementation of the ATP with regional partners and through local plans, project lists and activities – “Adopt locally”

Implementation activities proposed for Year 1:

1. Convene partners and stakeholders periodically to build support and maintain momentum.
2. Coordinate and develop partnership with ODOT Active Transportation Program.
3. Remain a participating partner in developing the Oregon Active Transportation Summit.
4. Participate in development of ODOT Bicycle and Pedestrian Plan.
5. Participate in local pedestrian and bicycle advisory committees.
6. Participate in local TSP updates to include ATP recommendations.
7. Participate in the refinement of the TriMet Transportation Improvement Program and transit access study implementation.

Implementation activities proposed for Year 2:

1. Continue implementation activities from Year 1.
2. Support an ongoing regional active transportation forum, building on success of SAC, focusing on the development of pipeline projects at the local level; advancement of best practices; and building of local staff understanding and expertise about the ATP ad active transportation in general.

C. Support best practices for implementing a regional active transportation network that is available for all ages and abilities and helps achieve desired regional outcomes – “Better result on the ground”

Implementation activities proposed for Year 1:

1. Work with partners on potential update of ORS 366.514 Oregon’s walking and bicycling bill, or a regional policy, to complete pedestrian and bicycle networks through roadway maintenance projects to bring roadways up to AASHTO design standards for pedestrians and bicyclists.
2. Propose Metro resolution supporting and recommending use of NACTO Urban Bikeway Design Guide.

Attachment 3

3. Develop and coordinate regional bicycle and pedestrian counting data collection program and support development of pedestrian and bicycling modeling tools.

Implementation activities proposed for Year 2:

1. Develop design guidelines for transit and bicycle parkway interaction.
2. Develop design guidelines for regional trails as transportation facilities.
3. Identify resources and partners to maintain and enhance regional bicycle and pedestrian facility data.
4. Support continuing Metro's role in leading regional trail counting.

Additional implementation activities not yet included in Year 2; included if resources allow:

1. Develop parking data collection to support local jurisdictions develop parking management plans and achieve economic development goal (Parking management is a key tool in increasing levels of walking and bicycling).
2. Participate in PORTAL technical advisory committee and coordinate with TRANS PORT.

D. Maintain existing levels of funding for active transportation, utilize existing funding effectively and efficiently, and partner on broader efforts to include active transportation in new funding initiatives – “Maintain funding; seek new funding”

Implementation activities already included in the draft 2014 RTP work scope:

1. Staff the MTIP process to provide for placement of conditions on funding for transportation improvements in the MTIP that require local governments to meet design standards for bicycle and pedestrian improvement and to include bicycle and pedestrian improvements in all roadway projects.

Additional implementation activities proposed for Year 1:

1. Participate and coordinate with Community Investment Initiative to include regional bicycle and pedestrian priority infrastructure in package of improvements.
2. Coordinate and support active transportation elements of potential new sources of transportation funding (applications for grants, prioritization of local funding sources).

Implementation activities proposed for Year 2:

1. Continue implementation activities from Year 1.
2. Partner with ODOT Active Transportation Program to maintain and grow levels of funding for active transportation programs.
3. Develop a “Transit, Bicycle and Pedestrian Funding Guide” for partners.
