

America's Nat

America's Best Kept Secret
When President Theodore Roosevelt made Key Pelican Island in Florida a refuge for birds in 1909, he founded one of America's greatest wildlife conservation spectacles.

Restoration & Conservation

Action Plan

Watershed Assessment: The watershed assessment is a critical first step in understanding the current state of the watershed and identifying areas for improvement. It involves a thorough review of existing data and field observations to determine the health of the watershed and the impact of human activities.

Watershed Protection: Watershed protection involves implementing measures to prevent pollution and degradation of the watershed. This includes enforcing regulations, promoting best management practices, and conducting regular monitoring and maintenance of watershed infrastructure.

Watershed Restoration: Watershed restoration involves restoring the natural functions and values of the watershed. This includes activities such as riparian zone revegetation, stream bank stabilization, and habitat enhancement.

Watershed Conservation: Watershed conservation involves protecting the natural resources and values of the watershed for future generations. This includes activities such as land use planning, resource management, and public education.

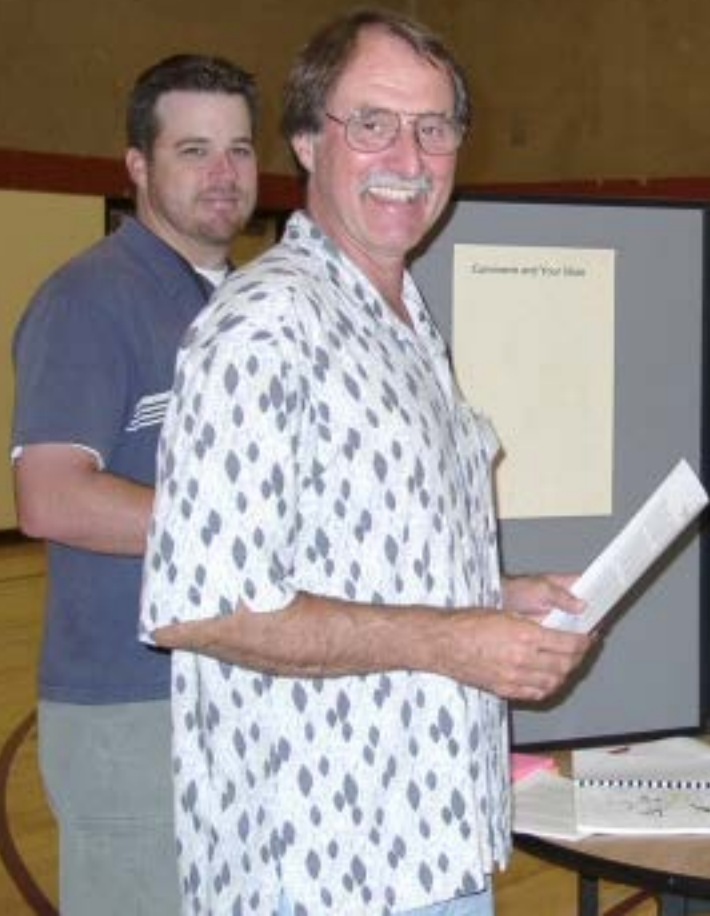

Restoration & Conservation

Conservation and Your Role

Collaborate with various organizations and individuals to engage and implement restoration and conservation activities on riparian and other streamside lands.

Streamside Riparian Action Plan

- Develop riparian zone (RZ) and riparian habitat plan
- Identify riparian zone boundaries and riparian habitat
- Identify riparian zone management goals and objectives
- Develop a riparian zone management plan
- Implement riparian zone management plan
- Monitor riparian zone health and condition
