The meeting location is accessible to persons with disabilities. A request for an interpreter for the hearing impaired or for other accommodations for persons with disabilities should be made at least 48 hours before the meeting to [Jessica Martin, 503-797-1918, jessica.martin@oregonmetro.gov](mailto:jessica.martin@oregonmetro.gov)

# Metro respects civil rights

Metro fully complies with Title VI of the Civil Rights Act of 1964, Title II of the Americans with Disabilities Act, Section 504 of the Rehabilitation Act and other statutes that ban discrimination. If any person believes they have been discriminated against regarding the receipt of benefits or services because of race, color, national origin, sex, age or disability, they have the right to file a complaint with Metro. For information on Metro's civil rights program, or to obtain a discrimination complaint form, visit [oregonmetro.gov/civilrights](http://oregonmetro.gov/civilrights) or call 503-797-1890. Metro provides services or accommodations upon request to persons with disabilities and people who need an interpreter at public meetings. If you need a sign language interpreter, communication aid or language assistance, call 503-797-1890 or TDD/TTY 503-797-1804 (8 a.m. to 5 p.m. weekdays) 5 business days before the meeting. All Metro meetings are wheelchair accessible. Individuals with service animals are welcome at Metro facilities, even where pets are generally prohibited. For up-to-date public transportation information, visit TriMet's website at [trimet.org](http://trimet.org)

# Cooling Corridors Study

*This project offers the opportunity to develop a data informed approach on ways to increase regional resilience to extreme heat in future work, including an updated 2040 Vision.*

## Introduction

The Portland-Vancouver region, like many places in the world, is experiencing the impact of global climate change in the form of more frequent and longer periods of extreme heat at higher temperatures, with higher impacts to people of color, older adults, and low-income and unhoused people. These effects on people are compounded by damage to the natural environment and critical infrastructure, such as buckling roads and transit rail lines, and heat-related power outages.

## Project description

The project team will engage and partner with subject matter experts, community-based organizations, and other jurisdictions to learn how other places across the country and the world are addressing more frequent, intense and prolonged extreme heat events. The project team will identify areas of heat risk, paired with potential intervention strategies. The strategies will be identified through best practices research, a review of federal guidance and governmental tools and programs, and engagement with expert panels and community-based organizations. This work will identify the benefits of a regional approach and how it could guide future policies and investment decisions.

## Project outcomes

Research findings and recommendations will be summarized in a final report that includes:

- **Research on existing efforts and best practices** in the region and among peer regions, including cost-effectiveness and benefits of different approaches.

*Metro heat mapping analysis*

- **Regional geographic information system (GIS) analysis** (e.g., heat island mapping, topography, hydrology, meteorology, land cover, tree canopy) to visualize heat risk areas, existing cooling corridors and potential opportunities to connect existing cooling corridors.
- **Equity analysis** to understand which geographic areas and communities in the region are disproportionately affected by urban heat.
- **Implementation recommendations** on opportunities to help make the region cooler and provide relief during extreme heat events.
- **A network of subject matter experts, community-based organizations, and jurisdictions** to engage in heat resiliency projects and strategies for funding.

# OREGON TRANSPORTATION EMISSIONS

[ACTION CATEGORIES](#) [ABOUT THE PROJECT](#) [RESOURCES](#)

Oregon state agencies and local governments are working together to reduce greenhouse gas emissions from transportation to 80% below 1990 levels by 2050.

To reach our goal, we're working in six transportation categories to reduce growth in vehicle miles traveled, and to clean up each vehicle mile. Click each tile below to learn more.

### One Goal Closing the gap: how Oregon can reach 80% reduction by 2050

Under current state programs, policies and laws, the latest analysis in 2022 forecasts Oregon greenhouse gas emissions reduction will reach nearly 60% below 1990 emission levels by 2050. That's short of the 80% reduction goal. To get the rest of the way there, state agencies and the legislature have to do more in both objectives, and across all categories of actions.

#### Clean up each vehicle mile

## Climate touchpoints in the transportation planning process

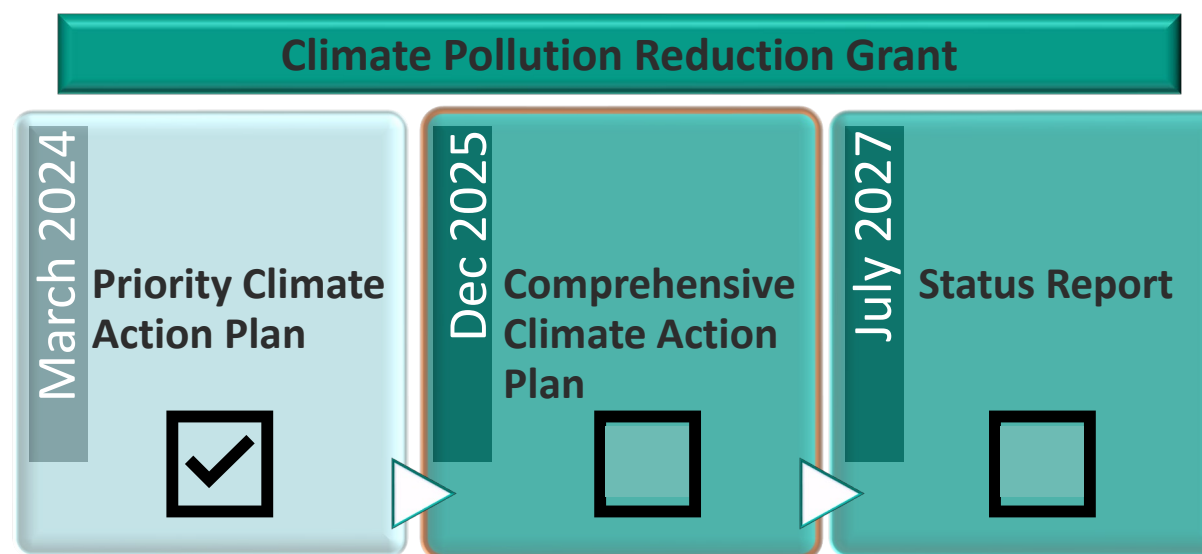

# Agenda

---

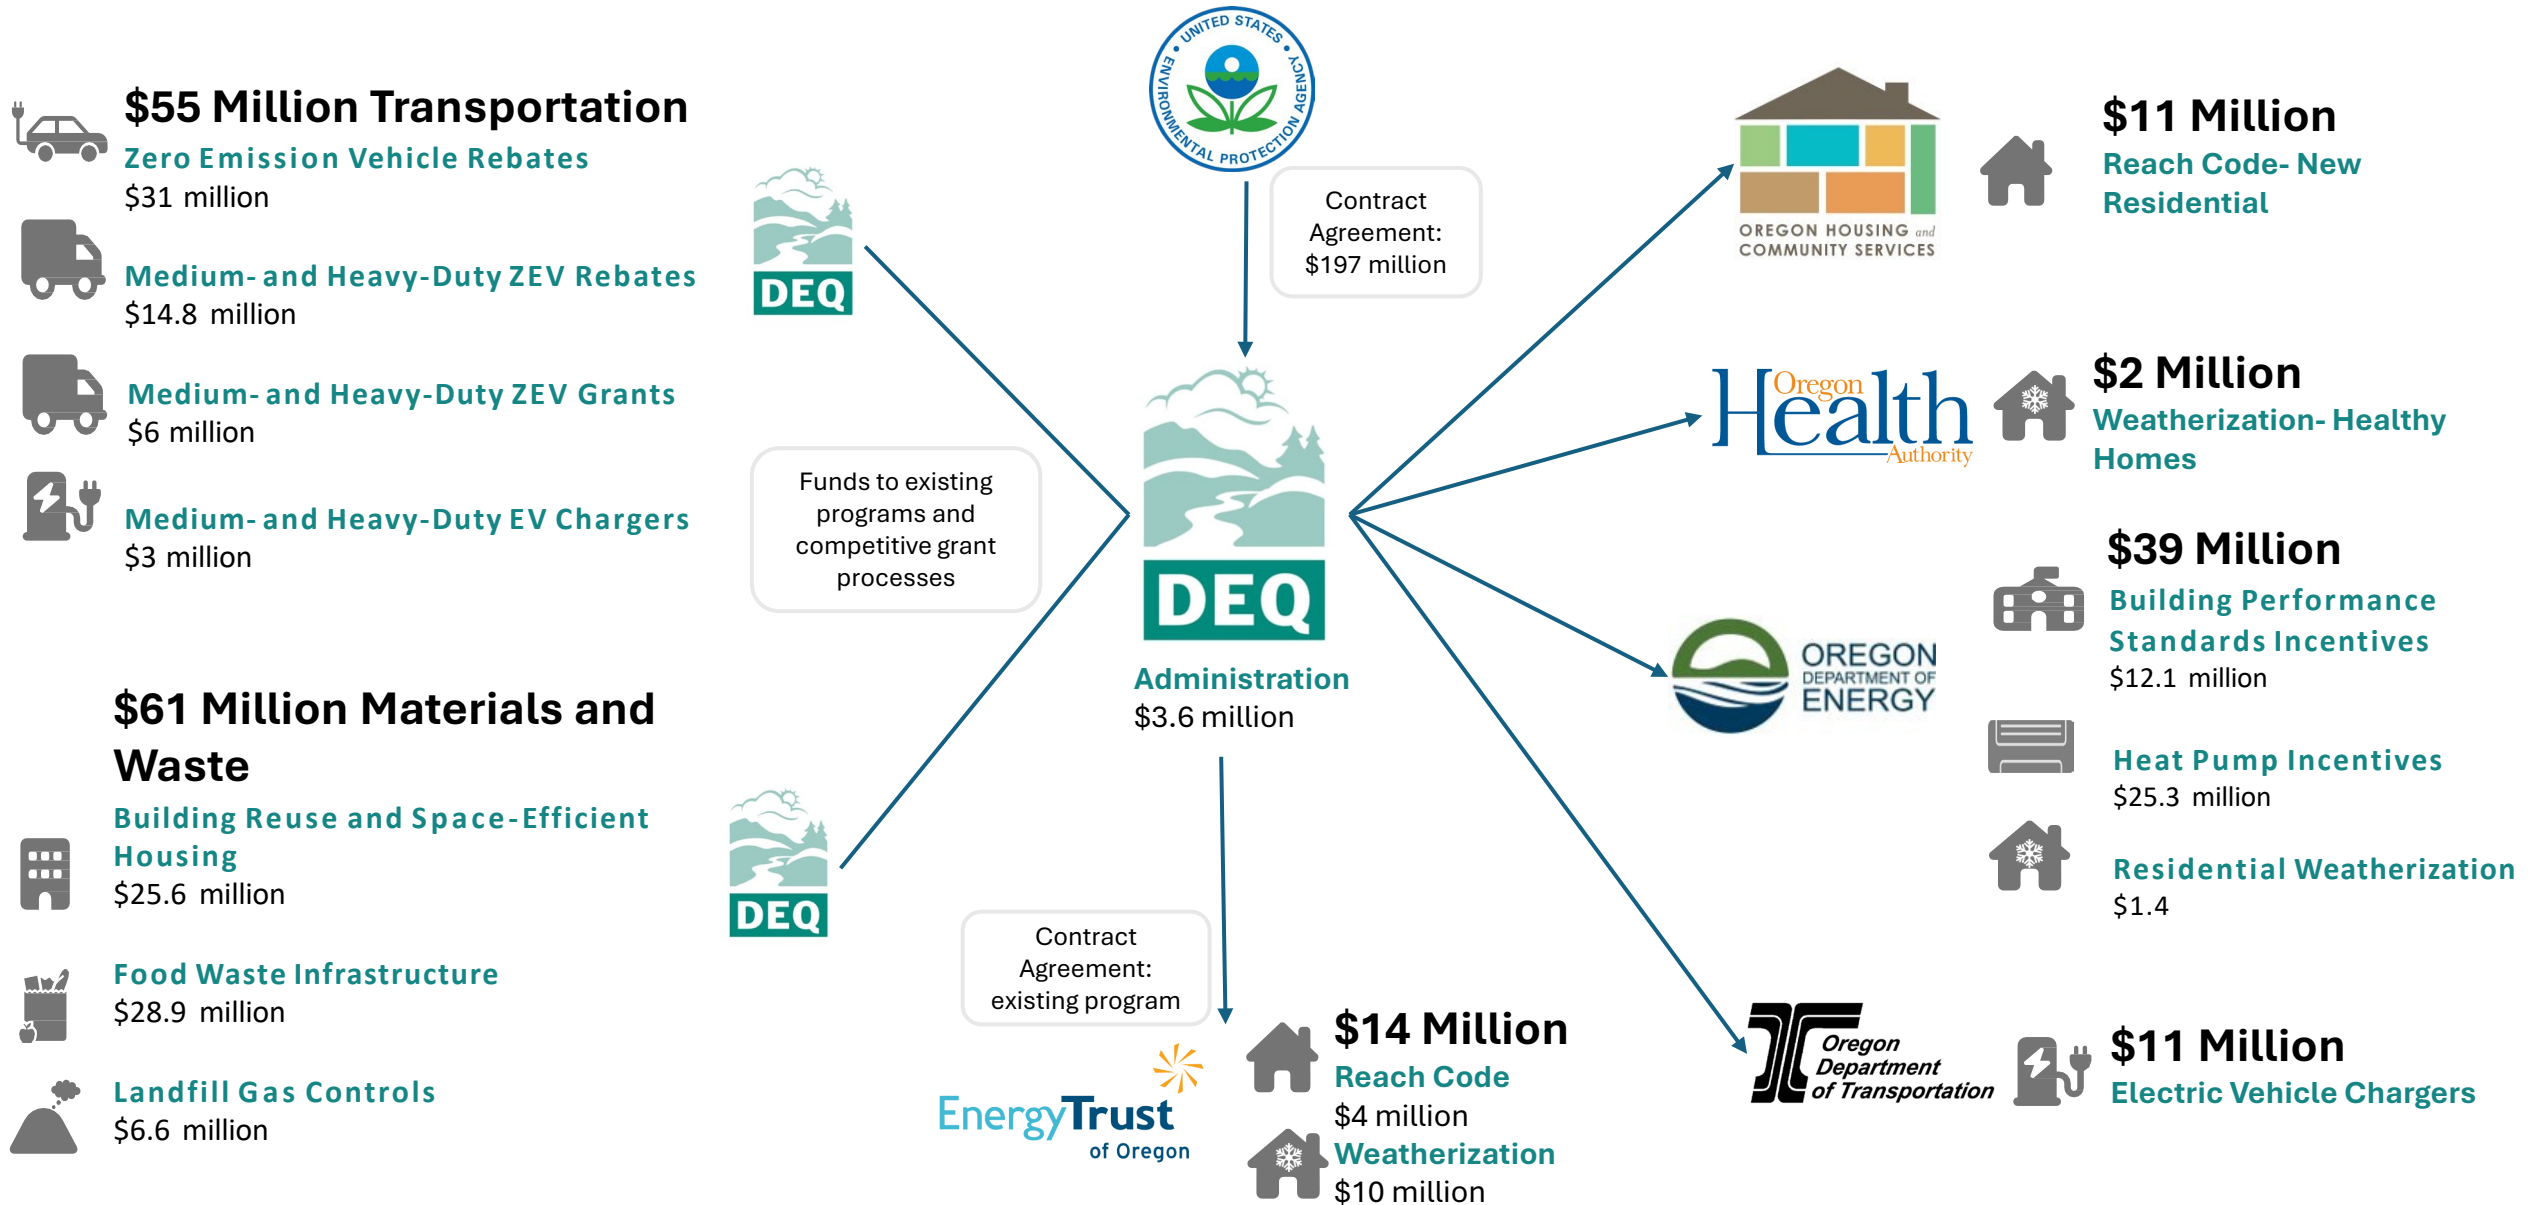

- Climate Pollution Reduction Planning Grant
- Oregon's Comprehensive Climate Plan Overview
- GHG Reduction measures
- Engagement opportunities
- Questions

# Climate Pollution Reduction Planning Grant

- The Comprehensive Climate Action Plan is the second of three requirements for the EPA's Climate Pollution Reduction Grant

# Climate Equity and Resilience Through Action

# CCAP Requirements

- Updated GHG Inventories
- GHG targets and forecast
- Quantified GHG Reduction Measures:
  - GHG and Co-pollutants
  - Costs and potential funding sources
  - Benefits analysis
  - Authority to implement
  - Gaps
- Workforce Planning
- Engagement

# Leveraging work and partnerships

---

## DEQ

- Updated consumption-based Inventory and policy recommendations
- Updated sector-based inventory
- Statewide outreach and engagement

## ODOE

- Transformational Integrated Green House Gas Emissions Reduction Report 2.0
- Oregon Statewide Energy Strategy
- Net Biological Carbon Sequestration and Storage Inventory
- Workforce needs assessment (OSES and NWL)

## Shared

- Gap Analysis
- Compiling existing climate plans and resources
- Culminating final report

# Transformational Integrated Greenhouse Gas Emissions Reduction Analysis (TIGHGER)

---

- Modeling forecasts GHG emissions reductions from existing programs and regulations through 2050
- Alternative scenarios modeled to illustrate and compare emissions reductions and other outcomes from alternative policy futures
- TIGHGER policies and actions will represent climate action measures in Oregon's CCAP

# TIGHGER GHG Reduction Forecasting

## Programs and Regulations Adopted and Under Development

# TIGHGER GHG Scenario Analysis

# Oregon Statewide Energy Strategy

---

- Modeling identifies different pathways to achieve Oregon's climate and energy targets goals
- Reference scenario presents least-cost pathway to meet goals
- Alternative scenarios apply constraints to reflect different potential energy futures (e.g., slower rate of transportation electrification)
- Supplemental analyses will assess impacts on costs, air quality, land use, jobs, and workforce needs

# Modeling is Structured to Comply with Oregon Laws

- Oregon has aggressive climate policies and goals, including 80% reduction in greenhouse gas emissions economy-wide by 2050
- Each modeled scenario shows a pathway to achieving our goals
- Nearly all emission reductions come from energy sector

Emissions by Type and Source (Sink)

*Note: Analysis was undertaken using the Climate Protection Program as proposed.*

# What If Scenarios and Assumptions

---

**Reference.** Least-cost way to achieve goals. All other scenarios build on the Reference by changing a key area:

1. What if **energy efficiency and building electrification** is delayed by 10 years?
2. What if full **transportation electrification** of medium- and heavy-duty vehicles is delayed 10 years, from 2040 to 2050?
3. What if there is **limited demand response** participation?
4. What if there is **limited utility-scale electricity generation** in Oregon?
5. What if there are higher levels of **rooftop solar and behind-the-meter storage** and **transmission is limited to reconductoring** only (no new build)?
6. What might an **alternative portfolio** of flexible resources for electricity reliability look like?

# Delaying Electrification of Trucks beyond 2040 is More Costly

- Delaying when Oregon reaches 100% medium- and heavy-duty ZEV sales by 10 years increases costs
- Puts more pressure on clean fuels to meet targets
- Efficiency losses mean total demand 0.7% higher in 2040 and 0.9% higher in 2050
- To meet emissions target, **almost all vehicle fuel must be clean by 2050**

Difference to Reference (Cumulative NPV \$B)

# Delaying Electrification of Trucks beyond 2040 is More Costly

- Without the MHD ZEV targets required by the Advanced Clean Trucks rule, costs increase significantly
  - More than double Delayed TE
- Early adoption EVs, including MHD EVs, is critical for cost containment
- No ACT is \$16B NPV higher over 25 years than Delayed TE

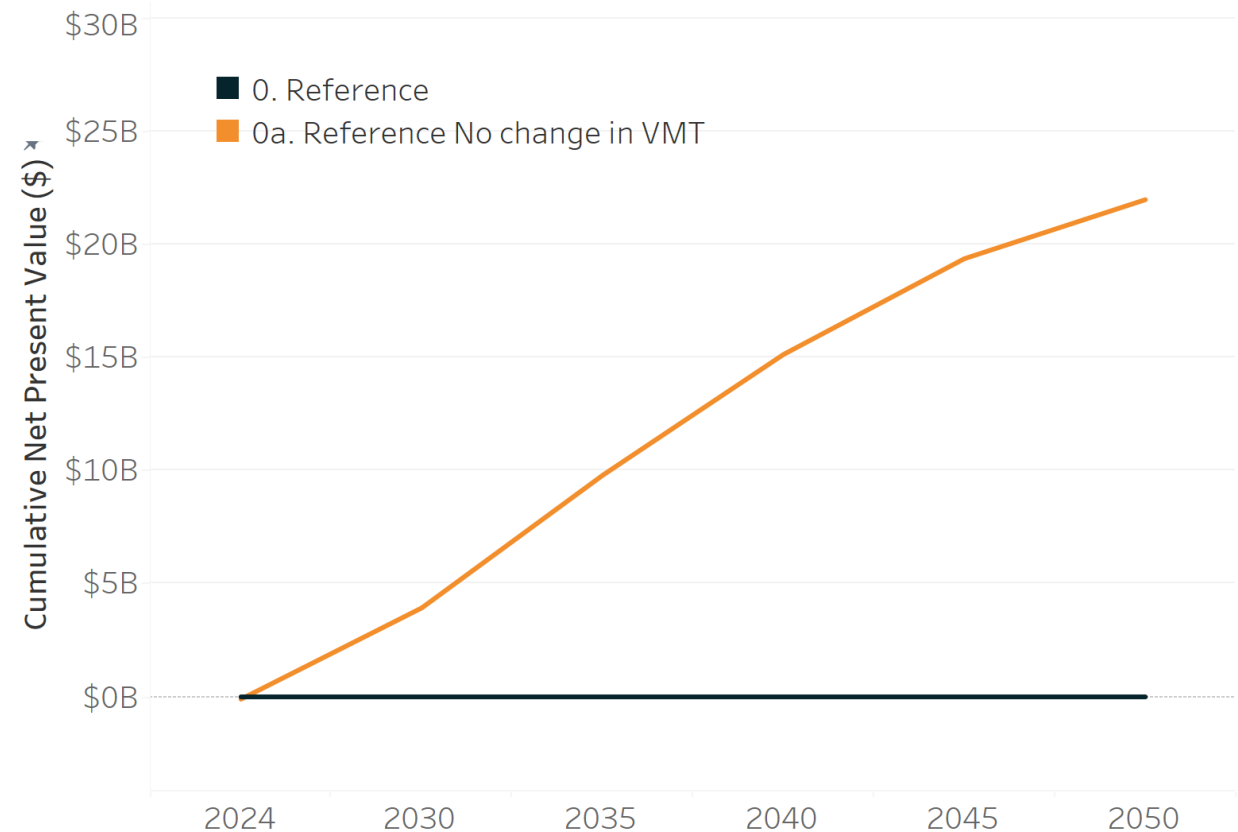

Difference to Reference (Cumulative NPV \$B)

# Reducing Vehicle Miles Traveled Saves Money

- VMT reductions save \$22B over 25 years
- The Reference Scenario incorporates Oregon's goal of a 20% reduction in VMT by 2050
- Removing improvements in VMT drives up costs by increasing the overall energy demand in the economy

# Cooling Corridors Study

Transportation Policy  
Alternatives Committee  
Workshop

February 12, 2025

Metro

# Why cooling corridors?

- Interest in climate resilience, ventilation corridors, strategies for adapting to extreme heat
- Inform Metro Future Vision and 2028 Regional Transportation Plan update
- Could include different types of corridors
  - Land acquisition for greening
  - Targeted street interventions

Image credit: Kevin Bermingham

# Project outcomes

- Understand current cooling resources and opportunities to reduce impacts of extreme heat on people and places
- Develop a network of subject matter experts, CBOs, and governmental partners to engage in urban heat resiliency projects
- Share best practices and use them to inform regional planning, policies and investments

# Identifying Corridors of Interest

- Assess distribution of tree canopy
- Assess distribution of existing hot and cool areas
- Identify options for (1) cooling hot areas or (2) connecting or expanding cool areas
- Identify inherent strengths and weaknesses of geographic “system”
  - Hills, water, wind, sun...

# Pairing analysis with implementation

- What are the tools?
  - Green infrastructure, pavements, roofs, shade, water, parks, wind?
- What is Metro's role?
  - MPO, funder, technical assistance, trails, parks and nature conservation

# Final report

- Research on existing heat reduction and adaptation strategies (locally, nationally, and internationally)
- Analysis of cost-effectiveness, scalability, and potential funding sources
- Multi-layer Geographic information systems (GIS) analysis (tree canopy, temperature, water bodies, parks)
- Equity analysis (SVI)
- Implementation recommendations

# Engagement

- Metro staff
  - COO office
  - Planning, Development & Research
  - Parks and Nature
- Governmental partners
- Expert consultation
- Smart Surfaces Coalition (10 city cohort)
- Community-based organizations

# Questions for TPAC

- Has your agency or organization done work in this area?
- Do you have suggestions for who to engage in this study?
- How would you like to continue to be involved or informed in this project?

# Thank you!

## 2/12/25 TPAC Workshop Chat

01:28:30 Gerik Kransky - Oregon DEQ: I would love to see Metro's org chart again if possible.

01:34:41 Glen Bolen, ODOT (he/him): I second Gerik's statement.

01:38:41 Tom Kloster, Metro (he/him): Thanks, Gerik and Glen - we will circle bak to that after Madeline's presentation.

01:41:04 Adam Torres (Clackamas County DTD): fyi - the Quick Facts viewer link on the meeting agenda produces a 'page not found'; I believe the most up-to-date link is <https://experience.arcgis.com/experience/0270abe518a74139a617bceed07517f0>

01:42:02 Gerik Kransky - Oregon DEQ: Thank you!

01:44:49 Clint Chiavarini (he/him) - Metro Data Resource Center: The agenda has a typo in the URL. Should be <https://gis.oregonmetro.gov/quick-facts-viewer>

01:46:15 Kate Lyman, TriMet (she/her): Thanks Madeline for the great tool!
